Field of Study
Student-athletes in a pilot program stretch toward academic goals
"If you can't follow the Jayhawks in person, have them delivered to you."

I'm pleased to introduce an exclusive offer to all KU alumni. Home Court Productions, Inc. is putting together a season's worth of Jayhawk basketball videos that will keep you on top of this year's action — AND benefit the KU Athletic Department and KU Alumni Association at the same time.

Here it is. HOME COURT. Ten exciting '92-'93 KU games — games you can't see on network TV or ESPN — delivered directly to your home on VHS tapes within just a few days of the game.

Each game is commercial-free and includes my on-camera comments, half-time highlights of KU student athletes and every second of the featured game — approximately 90 minutes of KU basketball — professionally produced and sent to you via UPS after each game.

It's the perfect gift for any KU fan, especially those who don't live in the area and can't see most of our games.

Your satisfaction is guaranteed. Just call 1-800-34-HAWKS. It's a great way to support KU athletics and the Alumni Association while following the Jayhawks all season long.

Sincerely,

Roy Williams

P.S. Order the ten-game package and you'll receive our FREE Late Night/Player Preview video with all the fun from our "Late Night" celebration, plus my recruiting philosophies and exclusive features on our new players. A $25 value — yours FREE with the ten-game package.

Subscribe today!

Enjoy the HOME COURT advantage!

- Ten exciting Jayhawk games, professionally produced and delivered to your home on VHS tape within approximately seven days of the game. Just $14 per game, plus $3.50 shipping and handling.
- Candid on-camera comments from Coach Williams.
- Half-time shows filled with news and features on KU athletics.
- An exclusive FREE Late Night/Player Preview video featuring Late Night practice fun, plus a look at new players Darrin Hancock, Sean Pearson and Calvin Rayford.

Exclusive additional videos available from HOME COURT:
- Jayhawk Basketball Camp — Coach Williams, his staff and players teach the basics of Kansas basketball. A great gift for all Jayhawks! Approximately 60 minutes. Just $36, plus $3.50 shipping and handling.
- Hawk Watch — Coach Williams narrates an exclusive tape of the '91-'92 Big 8 Championship season. Relive the magic while Roy "tellistrates" the plays and describes the action. Approximately 45 minutes. Just $26, plus $3.50 shipping and handling.

Your personal '92-'93 HOME COURT season.

Dec. 12 — Kansas City Classic/Kemper Arena
Dec. 21 — North Carolina State/Home
Jan. 6 — Wichita State/Home
Jan. 9 — Iowa State/Home
Jan. 23 — Colorado/Away
Feb. 10 — Oklahoma State/Home
Feb. 13 — Missouri/Away
Feb. 20 — Kansas State/Home
Feb. 27 — Colorado/Home
Mar. 12 — Big 8 Tournament Game/Kemper Arena

* Featured games are not available on national network TV or ESPN. Some games are subject to change.

KANSAS ALUMNI

Established in 1902 as The Graduate Magazine
Fred B. Williams, Publisher
Jennifer Jackson Sanner, J’81, Editor
Bill Woodard, J’85, Assistant Editor
Jerri Niebaum, J’88, Assistant Editor
Christine Mercer, Art Director
Karen Goodell, Editorial Assistant
Wally Emerson, J’76, Photographer
I edged cautiously into the weight room at Parrott Athletic Center. My mission was not to bench press. After all, I could barely balance the weight that already sagged my shoulders: My editor at Kansas Alumni had dispatched me, the new writer, to talk to a couple of KU football players. While they were pumping iron, I was supposed to pump them for information. Why had they missed the academic cut for the 1984-85 season? Did they blame themselves? Did they blame anyone else?

And the players were supposed to answer. Sure.

But answer they did. One ushered me quickly outside, where he talked at length, glancing warily over his shoulder. He didn’t want to draw attention, nor did he want to meet my gaze. Pain and embarrassment tugged his face down. He blamed no one but himself.

But others in the University community searched for reasons why 10 football players had been declared academically ineligible. Alumni, faculty and staff gnashed teeth and pointed fingers.

Some resented Kansas Alumni for putting the story on its October 1984 cover publishing articles written by then Editor Dan Reeder, Jr. ’71, ’84, then Assistant Editor Chuck Marsh, ’77, ’80, PhD ’85, and me. Some, I suspect, still eye me, the only culprit still on the staff, with distrust.

Our intent was not to pour salt on wounds but to provoke discussion of an important University issue. Facing flaws in your alma mater hurts the alumni who must write the stories as much as it hurts the alumni who read them.

But the joy of this job comes in waving the wheat—telling how the University has corrected problems. In spring 1991 Kansas varsity student-athletes earned a record-high cumulative grade-point average of 2.8. Several teams posted averages of 3.0 or better. In our cover story on page 24, Bill Woodard tells how the athletics department and researchers in the Institute for Research in Learning Disabilities have helped student-athletes improve their classroom scores.

In another story of impressive gains, Judith Galas chronicles Campaign Kansas, which concluded June 30. When Kansas Alumni featured the public launch of the campaign in May 1988, the drive’s goal was $50 million. Confident that fund-raisers would hit the mark, we asked artist Larry Leroy Pearson to wave some wheat on our cover. As you’ll read on page 18, the stack of gifts and pledges stands taller than even the most smug dared imagine. Pearson illustrated the results—and kindly allowed us to repeat some of his 1988 work for nostalgia’s sake.

Nostalgia, of course, is also the reason we publish Class Notes in each issue. Common memories bind many of us. One man with a passel of anecdotes is Calder Pickett, professor emeritus of journalism, whose column, Prime Times, makes its debut on page 32, just before Class Notes.

For 30 years Pickett taught History of American Journalism. His tests kept students up at night: I remember hours of drumming facts into my brain while stuffing Doritos in my mouth. I remember the music he played and the stories he told as if he had known every famous newspaper editor personally.

Pickett does know a good many folks who’ve made KU history. He has interviewed about 75 of them, now retired, for the KU Retirees’ Club’s Oral History Project. In Prime Times, he will share the best stories told by voices from KU’s past.

KU’s past also lives on in students who are Jayhawk descendants. In our annual Jayhawk Generations feature, which begins on page 34, you’ll read about crimson-and-blue-blooded freshmen. They once wore silly KU baby clothes while their parents snapped photos. They learned the Rock Chalk chant and the alma mater as preschoolers. And you can bet they need no lessons in waving the wheat.

—Jennifer Jackson Sanner
Powerful messages

Upon receiving Kansas Alumni [July/August], I paused to admire and think about the prairie photo and message, "Plants Know We Don't. Respect Difference," on the inside cover, wondering if the page might be available in poster form. Then my daughter, Betty Sue Cross, [c's 79, m'd] phoned to ask if we could get a copy for her for framing because the cover had been creased on the copy of the magazine she received.

This is a very good magazine, and this is not the first of the inside-cover messages that has caught our attention as attractive, meaningful or clever.

But this one is extraordinary. I'm not surprised our daughter wants to display it on her wall.

We also read the articles, often!

Human Development and Family Life
Lawrence

It was a joy to open Kansas Alumni [May/June] and see the wonderful illustration and powerful message, "Show a Tender Face," on the inside cover regarding the need to respect difference among our cultures.

As vice president for student affairs at Northern State University I have the good fortune to learn daily from the Native Americans in our student body, and you are quite correct in referring to Black Elk as one of the Lakota visionaries. Our institution continues to strive toward a bias-free campus environment. How proud I am to know my alma mater is doing the same.

Kudos to the University Senate Committee on Human Relations for sponsoring the inside cover of the issue. I now have the framed ad hanging in my office and it is generating a great deal of discussion and many positive comments. Additionally, a number of individuals are asking me how they can obtain copies of the ad. This should further affirm that you folks are doing things right!

Beth Wray, d'69
Aberdeen, S.D.

Several readers have asked whether the messages developed for the University's "Respect Difference" campaign were available as posters. Unfortunately, the project was completed by staff with a minimal budget that allowed only for producing the ads.—the Editor

Equal standards

There has been considerable misinformation in the popular press regarding the role of the University in hosting a recent pro-family rally sponsored by Kansans for Life.

The University treated the parties involved on both sides of the issue fairly, equitably and with dignity. This letter reflects the essence of my response to the individuals who contacted the University following an article that appeared in a recent Kansans for Life newsletter.

It is not the practice of the University to take positions on various political or social problems, many of which are complex, controversial and sensitive. The University is a forum to research, discuss and debate these issues. It is our responsibility to create an environment where such debate can be accomplished objectively. We are also responsible for fostering an atmosphere where all sides and facets of an issue can be examined.

Kansans for Life asked to use a University facility, Memorial Stadium, and permission was granted. The expectations for KFL were the same as those for any non-University group. KFL was expected to pay rent and all the extra costs associated with controlling a crowd that organizers estimated could reach 20,000 people.

The Lawrence chapter of the National Organization for Women notified us that it would be on campus to counter-rally on the same day as the program in the stadium. Because we are a publicly owned and operated institution, we cannot prevent groups from being on the campus or restrict them from being outside a facility in protest of a program. The organization agreed to talk with us so that we might prevent any undue interruption of the program in the stadium. Members agreed to provide medical care, restroom facilities and other amenities suggested by the University. The purpose of this agreement was to keep the events peaceful and from interfering with the rights of others, including members of Kansans for Life.

Had the Lawrence chapter of NOW requested the use of a building (e.g., the stadium or the field house), it would have been required to meet the same standards as Kansans for Life. NOW was not required to purchase liability insurance because members were not using a University facility. It was suggested that members purchase liability insurance for their own protection, however, I do not know if they did so.

It is our desire to treat all groups who use our campus in a fair and equitable manner whereby they can pursue lawful and appropriate activities. We believe we achieved this objective in the case of these groups.

David A. Ambler
Vice Chancellor for Student Affairs

KANSAS ALUMNI MAGAZINE
Museums

Through March 14
And children ages 4-12 can go Horse Crazy, join the Owl Howl, fly through Bats: Myth and Reality and Hug a Tree during Weekend Workshops on Saturday and Sunday afternoons. Call 864-4173 for registration information.
Through Nov. 21
Spencer Museum of Art: "A Noble Collection: Old Master Prints from the Spencer Albums" features works assembled in Paris nearly 300 years ago;
Oct. 18-Jan. 3
Oct. 25-Dec. 27

Music and Dance

Chamber Choir presents fall selections at 3:30 p.m. in Murphy Hall.
Oct. 25
National Opera Company of Italy performs "Rigoletto" as part of the KU Concert Series at the Topeka Performing Arts Center.
Oct. 25
KU Jazz Ensembles blast Murphy Hall with their fall concert at 7:30 p.m.
Oct. 26
Mary Harris and Friends join viola and percussion for a Visiting Artists Series concert at 8 p.m. in Murphy Hall.
Oct. 28
OcutubaFest gives a "Grand Recital" at 8 p.m. in Murphy Hall.
Oct. 29
Concert Choir gives a fall concert at 7 p.m. in Murphy Hall.
Nov. 15
National Harpsichord Competition presents concerts at 8 p.m. nightly in Murphy Hall. Call 864-4345 for tickets or information.
Nov. 17-20

Artur Pizarro, '91, takes time from his worldwide performing schedule to visit Lawrence for a Concert Series event at 8 p.m. in Murphy Hall.
Nov. 17
University Symphony Orchestra performs a fall concert at 7:30 p.m. in Murphy Hall.
Nov. 22
KU Jazz artists present a fall concert at 7:30 p.m. in Murphy Hall.
Nov. 23

Theatre

University Theatre brings "The Tempest" to Murphy Hall, where Professor William Kuhlike stars at 8 p.m. nightly and at 2:30 p.m. Oct. 18. The performance marks Kuhlike's retirement.
Oct. 16-17, 22-24

English Alternative Theatre presents "Come Back, Little Sheba," by William Inge, c. '55, at 8 p.m. in Liberty Hall. Also 2:30 p.m. Oct. 25. For a schedule of staged readings by the English Alternative Theatre, call 864-4520.
Oct. 22-24
David Gordon, Philip Glass and Red Grooms collaborate to question "Mysteries and What's So Funny?" a multi-media New Directions Series event at 8 p.m. in Murphy Hall.
Oct. 31
Japanese Theatre performs "Kyozen and No II" at 8 p.m. in Murphy Hall. Also 2:30 p.m. Nov. 8.
Nov. 5-6
University Theatre explores how the Civil War lingered for turn-of-the-century black Americans in "Jo Turner's Come and Gone" at 8 p.m. nightly in Murphy Hall.
Nov. 13-14, 19-21
For tickets to music, dance and theatre events, call the Murphy Hall Box Office, 864-3982.

Homecoming

Friday: The Class of 1982 comes home for a reunion, and all classes gather for a parade at 2:20 p.m. on campus.
Saturday: The School of Education holds an open house, and the Alumni Association sponsors a Picnic-Under-The-Tent before the 1 p.m. football game against Oklahoma. See page 12 for details.
Oct. 23-24

Saturday Seminars

For the 10th year, the University sponsors free seminars before football games. For adults, faculty members will discuss evolution, a new cancer drug, the Soviet Union's demise, novel writing, jazz history and other topics. Children can attend workshops on America's discovery, bats and ancient Greece. To enroll contact Robert Zerwekh at 864-3301.

Above, William Kuhlike played Jack Jerome in University Theatre's "Brighouse Beach Memories" in 1987. This year he retires with a final performance as Prospero in "The Tempest" during Homecoming weekend Oct. 22-24 and also Oct. 16-18.

Pizarro on Nov. 17 will make his old stomping ground part of his international concert schedule.

21 Oklahoma State, 2 p.m.
28 Kansas State, 2 p.m.

Home games played at Allen Field House.
All game times are Central Standard Time and are subject to change. For ticket information, please call the Athletic Ticket Office, 864-3140.

The Marching Jayhawks began striding down Campanile Hill for football games in 1971. This year, the University celebrates the centennial of hands at KU—and the Homecoming halftime Oct. 24 should be spectacular.
They'll revel until the cows come home

In 1867, a year after KU opened, Lawrence passed an ordinance to ban the running of cows on Massachusetts Street. But Mass. Street runs by students are as predictable—albeit less dangerous—than the runs at Pamplona.

New stops for the stampede (which still ends across the river at a cleaned up, downright respectable Johnny's) include Teller's, which deposits gourmet pizza in the former First National Bank at 8th and Mass. (Restrooms are in the vault.) Another new joint, Hockenbury Tavern, features live music Chicago-style, just toss your peanut shells on the floor.

The 600 block features the new Quinton's, a hot spot for giant margaritas. The Free State Brewing Co. across the street still draws heavy crowds. Next door is La Prima Tazza, a tony choice for cappuccino after a show at Liberty Hall—Red Dog Inn fans wouldn't recognize their old stomping ground.

Although the Red Dog (and its later incarnation, the Opera House), The Brewery, The Chute, Quantrill's, Mr. Bill's, Chevy's and Bottoms Up all have gone the way of the Blue Mill and the De Luxe Cafe, many smoky taverns remain, including The Harbour, Louise's and The Mad Hatter.

Even though their watering holes change over the years, students can't be fenced.

D ON'T GO AW AY DEAD; JUST GO AWAY

A Hollywood crew came to Lawrence in 1990 to film "Where Pigeons Go To Die." But life does not imitate art on Mount Oread. The fowl pests come here to live.

Notorious roosts include Memorial Stadium, Dyche Museum of Natural History, Strong Hall and Malott Hall, where feces piled a foot deep in the courtyard this summer. Facilities operations didn't want to contract a cleanup crew—at a cost of about $1,000—until they could chase off the perpetual poopertrators.

"The mess is horrid; it makes my skin crawl," says Steve Helsel, facilities operations associate director of landscape maintenance. "But if you clean it up without getting rid of the pigeons, you'll be back cleaning it a month later."

Helsel's wings are clipped by the scarcity of nonlethal pigeon-control methods. "Since we can't poison, shoot, maim or electrocute them," he says, "we have to get creative." At Memorial Stadium, for instance, they use live traps to capture the birds. But after they are released in the country, the pigeons often return.

"It seems like anything you do," Helsel says, "ends up making you look stupid." But the birds can't crow victory yet. At Malott Helsel has found success with a device that has worked magic at Disneyland: a grid pattern of fishing line strung atop the courtyard. Helsel says the net has frightened off most of the flock, and he thinks the few remaining daredevils will flee after he reduces the grids from 6 feet to 4. Meanwhile, he has ordered a cleanup of Malott.

And that, folks, is the latest poop.
You could still say it's a meat market

The disco ball has taken its final turn at 901 Mississippi St. On July 12, the Power Plant powered down and prepared to auction everything. The 4-year-old nightclub had maintained an electric atmosphere built by previous discoteques at the site, among them Shenanigans and The Pladium. The building opened in 1947 as a 12-lane bowling alley called The Pladium.

Displaced dancers won't get much satisfaction when the building re-opens as the Community Mercantile Cooperative. The wholesome grocery store, which is feeling rather full at 700 Maine St., will make space for bread from Amazing Grains Bakery and meat from Kroeger's Country Store. The Free State Credit Union also will set up shop.

Bachelors will have to try new pickup lines: "Can I buy you a carob crunch?"

FROM THE PLAINS TO SPAIN

As the Olympics ended Aug. 9, three Jayhawks helped invite the world to the 1996 games in Atlanta. Debbie Adams, Overland Park senior and Crimson Girls co-captain; Sonya Snyder, Topeka senior and cheerleading captain; and Lovenia Stamat of d'92, a former cheerleader, joined 52 dancers—mostly professionals—in the 7-minute routine, "The Spirit of Atlanta."

The women were among 1,500 dancers who auditioned in seven U.S. cities last spring. The three earned a trip to Barcelona, where they mingled with Australian volleyball players and shared a stage with Greg Burge, a star from "A Chorus Line," and Brian Bait, who performs in "Cats."

The dancers revived their routine Sept. 17 at the grand opening of the Georgia Dome. All three are invited to dance at the 1996 Olympics, although career plans could get in the way. Snyder plans to work in sales or public relations, and Stamat hopes to work as an exercise physiologist. Adams, an English and broadcasting major, plans next fall to join a New York dance and gymnastics performing group. Anti-gravity: The troupe recruited her during Olympic auditions. She must have really stuck her landings.
New scholarship hall receives high marks

Robert Asher opens the heavy oak door to his KU quarters. He proudly points out the large walk-in closet, the spacious bathroom, the two bedrooms separated by a central living room. Central air-conditioning cuts summer's last blast. The fish in the aquarium swim serenely.

A guy could get used to this.

"We get a lot of grief from everyone who comes in here," admits Asher, Kansas City, Mo., freshman. "They call this place KU's luxury hotel."

The name will never hurt Asher, his three suitmates and the other 46 men who are the first settlers in sparkling Amini Scholarship Hall. There may be no place like home, but Amini comes darn close.

The $1.5 million, 16,425 square-foot structure in the 1300 block of Louisiana is the first new scholarship hall to rise on Mount Oread since 1954, when Douthart and Grace Pearson halls were built. A $1 million Campaign Kansas gift from Koli "K.K." e'49, and Margaret Wenski Amini, f'46, provided most of the bricks and mortar. The Aminis will return to campus Oct. 10 for an open house and dedication.

Hall director Shannon Schwartz, a fifth-year Topeka senior, lived in Battenfeld Hall the past four years. He remembers meeting the Aminis at Homecoming 1990, when they announced their gift.

"I sure hope they like the building, because we sure do," Schwartz says. He says the men take extra pride in keeping the place spotless. "We feel a lot of pressure, too," he says, "because everything is new and perfect. The housing department is giving a lot of tours, showing the place off."

It's easy to see why Amini Hall elicits envy. The dazzle starts with the first step into the ceramic-tile entry. A partition separating the foyer and living room incorporates a window salvaged from the KU-owned house that formerly stood on the site. In the living room, an overstuffed leather sofa is among the tasteful furnishings, and French doors open to a balcony overlooking a large patio. Amini is accessible for persons with disabilities, with extra wide halls and doorways and an elevator.

After a brutal day of classes, a weary resident can retreat to the basement media room with its 27-inch color television and video cassette recorder, perhaps stopping in the souped-up kitchen for a snack and tossing a load of laundry in one of two washers and dryers that operate just like home—no quarters required.

Only 18 residents of other scholarship halls applied to move to Amini, so 32 men are first-time scholarship hall residents; most are freshmen, like Robert Asher. "I was thinking I might pledge a fraternity next year," he says. "But I don't think I'll bother. I can see myself living here throughout college."

Law professor accused of sexual misconduct faces dismissal hearing

A University committee on Aug. 27 began a public hearing to determine whether to concur with Chancellor Gene A. Budig's recommendation to dismiss law professor Emil Tonkovitch on charges that he violated professional ethics and committed moral turpitude under the Faculty Code of Conduct. The charges stem from an August 1991 complaint against Tonkovitch, a faculty member since 1981, who earned tenure in 1986.

The hearing by the Faculty Senate Committee on Tenure and Related Problems is expected to last several months. The committee will vote to dismiss or uphold the charges against Tonkovitch. According to the faculty handbook, either side can appeal the decision to the Kansas Board of Regents.

Kansas Alumni in its November/December 1991 issue reported that four women had filed complaints against two law school professors. Under KU grievance procedures, all names and University actions were confidential. The complaint involving one professor had been resolved through the Office of Affirmative Action's grievance procedures for a charge of sexual harassment.

After determining that Tonkovitch had violated the Faculty Code in another of those cases, the University had recommended that Tonkovitch be suspended with pay for one year. Tonkovitch declined and requested a hearing.

Not long after the University's initial recommendation, new allegations were made against Tonkovitch, and Budig on March 11 told Tonkovitch that he would recommend his dismissal. Budig had
received recommendations for dismissal from Robert Jerry, dean of law; Del Brinkman, vice chancellor for academic affairs; and Del Shankel, professor of biochemistry, then interim executive vice chancellor for the Lawrence campus.

Tonkovich subsequently asked for a public hearing after the University Daily Kansan on April 23, 1992, named him in a front-page article concerning his alleged conduct with a student. The Kansan did not name his accuser.

The hearing is the second of its kind in KU history. Following more than five months of hearings, the Committee on Tenure and Related Problems on March 28, 1990, concurred with Chancellor Budig's recommendation to fire anthropology professor Dorothy Willner after concluding that she had failed to carry out academic responsibilities and had violated professional ethics.

The five-member committee in the Tonkovich hearing on Aug. 17 heard opening statements from Rose Marino, University associate general counsel, and Lisa Ford, a Kansas City attorney acting as lead counsel for Tonkovich.

Marino recounted the charges made against Tonkovich, the most serious of which is from a woman who says Tonkovich, after talking about the importance of grades, had coerced her into oral sex after a party during the 1988 summer session. She then was a first-year student in one of his classes. She completed her law degree in 1991.

Marino said that several other law students or graduates would testify that Tonkovich had made unwelcome sexual comments or advances to them. She said others would testify about his joking remarks—in class—about the law school's anonymous grading system.

Marino said his comments had made some women worry that he could manipulate their grades.

Marino said Tonkovich had engaged in a pattern of pursuing first-year women law students, using his position as a faculty member. The women, Marino said, feared that if they rejected his advances, he might adversely affect their grades or professional opportunities.

"I'm going to argue that these students were consenting adults," Marino said. "[They] are becoming students with a clear identity, and they are not children."

In her opening statement for Tonkovich, Lisa Ford, 1970, said her client was the target of a "witch hunt" led by a few law professors who had vendettas against him. She said Tonkovich had denied the charges from the outset and had demanded, to no avail, to confront his accusers.

Ford, a former student of Tonkovich's, stressed that none of the 2,000 anonymous student evaluations over 10 years had accused Tonkovich of sexual harassment or unethical behavior. She said that law professors and students regularly socialized and that Tonkovich, like several other single law professors, had openly dated students. "This is undoubtedly the basis of many rumors," Ford said. "It is not sexual harassment."

She said sworn affidavits from other students would discount the allegations against Tonkovich.

Hearings are scheduled every Thursday in the Kansas Union. Rud Turnbull, professor of special education and courtesy professor of law, is committee chairman. Others on the committee are: Nancy Dahl, associate professor of biological sciences; E.P. Johnsen, professor of educational psychology and research; John Michel, professor of speech-language-hearing, and Delores Ringer, associate professor of theatre and film.

Hilltop starts 21st year as KU's nursery school

Like the youngsters romping in its classrooms, Hilltop Child Development Center grows and grows.

Now 20 years old, Hilltop can do much more for families than when it first opened with three classrooms for preschoolers. It provides several child-care options, including full-day kindergarten, in nine classrooms serving ages 2 through 10.

And it must do all this in its original space. Housed in the former Methodist student center just off Oread Avenue, Hilltop now squeezes 161 children into rooms that once held only 54.

The fit is too snug, and Hilltop has more growing to do. Director Joan Reiber, 672, wants to provide more services to meet rising demand.

"There is just such a desperate need for infant care," Reiber says, "we really need additional space for drop-in care and later hours."

Indeed, Betty Peterson, coordinator of the 2-year-old KU Dependent Care Referral Service, says that in the past fiscal year she received calls from parents seeking care for about 200 children younger than 8 months.

"We don't have the space to do it," Reiber says.

Space, alas, isn't something the University has lots of these days. A Hilltop
proposal to put a second location in the basement of now-vacant Joseph R. Pearson residence hall probably won't fly. The University Space Committee has recommended an earlier proposal from the School of Education, which has outgrown Bailey Hall, to become the sole tenant of Pearson. That recommendation is under review by the Office of Facilities Planning.

Bob Bearse, chairman of the space committee, says the decision depends on the analysis of the School of Education's specific requirements. Still, he says, Hilltop can't expect to move into a new space in the next six months. "It takes anywhere from five to 10 years to solve a serious problem," says Bearse, associate vice chancellor for research, graduate studies and public service.

While that may frustrate Reiber—and the 200 families on Hilltop's waiting list—Executive Vice Chancellor Ed Meyen says he is well aware of child-care concerns in a workforce and student population that increasingly includes parents of young children.

"The need is clear," he says. "I think we need to take a long-term look not only at the need but also at the options for providing child care."

Meyen says a study of such options will soon be underway.

Given KU's long record in preparing early-childhood educators and in conducting research in child development, Meyen says, the University can set a standard for campus child care.

Hilltop, meanwhile, remains the sole nationally accredited child-care provider in Lawrence. The center caters to University clients (92 percent of Hilltop families are affiliated with KU). Paid care is optional during holiday and semester breaks; scholarships are available; and a sliding-fee scale helps accommodate low-income families.

In addition, KU students conduct research there, observe classrooms and do volunteer work. Hilltop employs more than 30 students part time.

"Parents know their children will be getting a good education and they will be safe and in a good environment at Hilltop," Reiber says.

In time, if Reiber has his way, parents and their children will feel safe and secure in two Hilltop centers.

—Hilltop story by Janet Majure, J '76, a free-lance writer in Lawrence.

Alumni are invited to attend an anniversary reunion from 2 to 5 p.m. Oct. 25 at Hilltop. For more information, call (913) 864-4940.

FRIDAY, OCTOBER 23

Class of 1982 Reunion
Homecoming Parade
2-20 p.m. down Jayhawk Boulevard to Oread Avenue

"The Tempest," a University Theatre production starring Bill Kuhike, professor of theatre. 8 p.m. Friday and Saturday. Call 913-864-3982 for tickets.

SATURDAY, OCTOBER 24

Class of 1982 Reunion
Homecoming Picnic-Under-The-Tent
11 a.m. to 1 p.m. south of Memorial Stadium
Football
KU vs. Oklahoma
1 p.m. kickoff
Memorial Stadium

For Homecoming details or to make reservations for Saturday's Picnic-Under-The-Tent call the Alumni Association at 913-864-4760.

For information about the Class of 1982 Reunion, call the Alumni Association at 913-864-4760. For KU football tickets, call 864-3141 or 1-800-34-HAWKS. To learn more about open houses, contact your school, department or living group.
'Hawks blast off 2-0, but true tests lie ahead

Don't jump up and down. Please. Don't ask what we are going to make of the first two games of the 1992 football season, games the Jayhawks won, 49-20 and 62-10.

We're not sure what this means. We've been led this way before. To hardened Kansas football fans, only one thing seems real with nine games left on the schedule, and that is the palpable feeling of hope that KU's early successes inspired.

Mixing hopefulness with Kansas football, however, can be dangerously intoxicating, like mixing tequila and heavy machinery. While you're feeling great, you suspect you may be in for one wicked hangover. Witness the 1985 season, when KU began 3-0 and flopped to 6-6. Jayhawk followers know better than to get too excited about a 2-0 start.

But since no one can drink a cocktail or a beer at a KU tailgate anymore, why not sample a few sips of hope?

After all, the defense surrendered only 215 total yards to Oregon State and 147 to Ball State. And defense, as any coach will tell you, wins championships. So what do you think Glenn Mason said after KU bounced Ball State?

"Our defense is really something, isn't it?" he gushed. Not long ago, the answer would have been, "Yeah, Coach, something awful." In 1988, Mason's first season, Kansas fielded the worst defense in NCAA history—opponents scored 496 points in 11 games.

But back then, people would have diagnosed you as delusional if you'd told them that Kansas would pin a decent Ball State team behind the midfield line for an entire half on Sept. 12, 1992. In fact, the Cardinals' only chance to score in Kansas territory after the first quarter came in the last minute of the first half, when quarterback Chip Hilleary threw an interception that was returned to KU's 4 yards. Kansas defense then bruged 1 yard in three plays and Ball State went whimpering into the locker room after a field goal, trailing 31-10. That, as they say, was the ballgame.

Some hysterical KU fans—undoubtedly freshmen—threw oranges on the field. Although the 62 points in the home opener were the most by a Kansas team since the Orange Bowl-bound 1968 Jayhawks socked New Mexico, 68-7, don't book a flight for Miami yet.

But another bowl could be on the itinerary. Ball State's defense was 11th best in the nation in 1991, and the Cardinals had scared nationally ranked Clemson on its home field the week before facing KU—they were tied 10-10 with the Tigers going into the fourth quarter before losing 24-10.

Kansas' 11 points in the first two games set a school record for the most combined points in the first two contests of any season. Or consider this. Mason's first KU team managed 189 points during the entire season.

The offense didn't rely on one weapon, although senior quarterback Hilleary, all confidence and savvy, obviously was the head honcho. Seven different players scored touchdowns at Oregon State, eight against Ball State. Against Ball State, the Jayhawks' attack balanced run (301 yards) and pass (281 yards). They even tossed in some razzle-dazzle when wide receiver Matt Gay took a reverse pitchout from Hilleary, then lofted a 30-yard touchdown pass to wide receiver Rob Licursi.

KU's offense proved so adept, in fact, that junior All-America candidate Dan Eichhoff kicked nothing but extra points against Oregon State and ended his streak of 11 games with at least one field goal. He made up for it against Ball State, rocketing 55- and 61-yard three-pointers. He also was perfect on all eight extra-point conversions and sent several kickoffs into orbit. His 61-yard boot, helped by a strong south wind, broke his own school record of 58 yards. Actually,

Eichhoff would have made it from much farther out—the ball sailed well through the uprights and was last seen floating in the grit over Omaha.

By the time you read this, Eichhoff's kick and Kansas football may have returned to Earth. The Jayhawks had two stern nonconference battles at Tulsa Sept. 19 and at home against California Sept. 24 on ESPN.

Still, a gulp or two of hope will turn the mind to strange thoughts. If the Jayhawks could get past Tulsa and Cal, they'd be 4-0 going into conference play. Then they'd have winnable games with Kansas State and Iowa State. They could stand at 6-0 on Homecoming, Oct. 24, against Oklahoma.

But you didn't read that here. Nope. Not gonna get excited.

Not yet?

—Bill Woodard

SACK LUNCH: Linebacker Ronnie Ward and his defensive cohort combined for eight quarterback sacks in two games.
NEW ANGLE
by Jerri Niebaum

Math can be fun.

Honest.

You can build stuff

with blocks—and build

lessons that will last.

Teachers will let you

argue about answers

and use your imagination.

They're creating new

classes, and

KU math professors

are helping.

Why?

Because kids

who love math now

will pass

calculus in college.
Most of us tried to swallow this alphabet soup at some time during our pre-teen years. Cooked up by some nerdy Greek guy seemingly to taunt us, it means that the sum of the squares of the lengths of a right triangle's short sides equal the square of the hypotenuse. The teacher wrote "Pythagorean Theorem" on the blackboard, as if to etch it in our brains.

Smart kids memorized the definition and got the right answers. Some of them still remember how. Other kids—now adults who joke that they "never could do math"—stared blankly at the foreign words. Some went to special classrooms to complete rows of more sensible computations. They quit taking math in high school and in college steered clear of majors like engineering and chemistry.

This decades-long story problem has had negative results. Science and industry are starved for bright new minds. The National Research Council in a 1989 report, "Everybody Counts," states that industry spends as much on remedial mathematics education as do all schools, colleges and universities combined. Meanwhile, 60 percent of college math enrollments are for courses ordinarily taught in high school.

Why don't students learn math the first time? Growing numbers of teachers say it's because classes aren't tangible, relevant or even interesting. In response, the National Council of Teachers of Mathematics in 1989 published a revolutionary curriculum that stresses problem-solving, modeling and real-world uses for math. The council essentially calls on teachers to dump out their desks and start again with $2 \times 2$.

The assignment overwhelms. But with a $150,000 grant from the National Science Foundation, three faculty members from the University's department of mathematics have launched a three-year project to help elementary-school teachers make new lesson plans. To begin, the department in July hosted a three-week workshop for area teachers.

Project director Judy Roitman and fellow math professors Tom Creese and Josef Dorfmeister shared the podium with six lead teachers from Lawrence, Topeka and Olathe. The University presenters didn't provide neat outlines of model teaching methods. Instead they asked the teachers to put away their textbooks, take out clean sheets of paper and tinker with standard deviation, fractals and algebraic equations. "We were able to relate things that they're doing in the classroom to extremely sophisticated mathematics," Roitman says. "That gives a kind of dignity and a kind of context."

For some teachers, the exercises tested longtime fears. "Toward the end of the first day," Creese recalls, "the teachers were asked to describe something about themselves. Many said that mathematics had been difficult for them in their own educations, that they had come through classes that seemed to be designed for anybody but them."

But this summer's math class was like none they had attended. Talking to your neighbor not only was allowed but also was encouraged. The leaders passed around bags of colored squares, circles, triangles and snap-together cubes. Linda Ware, mathematics coordinator for the Northeast Kansas Educational Service Center and a KU doctoral student, shared several computer programs, including one called "Building Perspective" that used the cubes.

If a city block is laid out on a three-by-three grid, the computer asked, what might the aerial view look like if from one side you see buildings three units, six units and five units tall? Must you see all three other sides before you can answer the question?

The teachers rolled up their sleeves and constructed skyscrapers from their snap-together cubes. They rotated mini-metropolises on their desks to see all views. Sometimes they saw more than one construction that fit the computer's criteria. "It was all very playful," Ware says, "as I think learning should be."

But the project was more than a game—and it wasn't easy. The teachers were studying perspective, a concept that traditional textbooks struggle to present on flat pages. With the cubes, even first-graders can begin to experiment with perspective, says Jan Dicker, d'68, a primary teacher from Grant Elementary School in Lawrence and a lead teacher at the workshop. Junior-high students can become more innovative architects by working with blocks on a five-by-five grid, she says. High-school students can use the cubes to study quadratic equations. College students can use them to explain the surface area of growing cubes.

Young children naturally want to play with the cubes. Dicker says, providing a sturdy base for later work. But traditional classrooms don't develop such skills. "Very often we have thought of three-dimensional shapes as an advanced concept," she says. "When a kindergarten teacher would sit down to teach geometry, she would have flat plastic squares, rectangles and circles. Well, a child's world is not flat and plastic. A child's world has height and depth. Children come to school with so much knowledge, and we don't tap into that reserve. It's critical."

With cubes, spheres, cylinders and other models at their fingertips, the teachers also saw new ways to question students. "The biggest change [with the new standards]," Roitman says, "is that kids are expected to really understand things—and to explain them to each other."

Instead of asking, "What does two plus two equal?" the teacher asks, "How many ways can you make four? How can you use pinto beans to show that your answers are right?"

"Answers become much more open-ended," Roitman says, "much more thoughtful...." Suddenly math isn't this mysterious thing that people created to torture you. It makes physical sense. Subject matter..."
Not all teachers embrace the new national standards for mathematics instruction. Many argue that if they throw out their textbooks, their students won't do well on standardized exams, such as the Iowa Tests of Basic Skills, which remain a revered measure of classroom fitness.

To endorse the new standards, the Kansas commissioner of education in 1988 contracted with KU's Center for Educational Testing and Evaluation in the School of Education to create a new assessment program. John Poggio, co-director of the center and professor of educational psychology and research, says the center tried its new exams statewide on 3rd-, 7th- and 10th-graders in 1991 and on 4th-, 7th- and 10th-graders in 1992.

Instead of drilling multiplication and division, the tests ask students to decide which process best answers a problem. Students must estimate. Sometimes more than one answer is correct. An "essay" section requires students to explain their reasoning. So far, scores have been abysmal. "On average, students have gotten 35 percent to 45 percent correct," Poggio says, "whereas they scored 75 percent on average with the old tests."

Teachers have accused Poggio of building a reading test rather than a math test. When he interviewed students, one complained: "Don't you know there's only one right answer?" To help, Poggio added a "safety net"—questions requiring only computation.

But Poggio is encouraged that teachers will use the tests as they have other standardized exams—to decide what to emphasize. "When people truly look at the exams," he says, "they say, 'You're right. We ought to be teaching this.'" Even students who couldn't answer the questions, Poggio says, told him that they were interesting and challenging.

Old standardized tests, Poggio argues, were neither. Even word problems merely disguised simple computation, he says: "Kids have been trained that when they see the word 'together,' that means add. What have they learned? Nothing."

Poggio admits that telling districts to abandon old tests is nerve. "Teachers are afraid," he says. "They can't answer the third-grade questions. The standards are so far out in front: We know the questions to ask, but we don't know how to teach the stuff."

But he hopes the tests will spur districts to invest in staff development, such as the National Science Foundation project that KU sponsored this summer. "What the NSF project is doing is vitally important," he says. "Without intervention, those scores aren't going to change." —JN

In Grant School's new Math Learning Center, Dickers coaches Brett Tingle, a second-grader, who figures out he can make 10 shapes using 5 squares.

becomes more sophisticated."

Roitman, who researches applications of set theory to topology, and her colleagues, who daily discuss such things as Boolean algebra, complex functions and fractals, admit that it's odd to revert to $2 \times 2$. "I'm a research mathematician," says Dorfmeister, a geometrist researching minimal surfaces. "I feel much more comfortable talking to teachers closer to college."

But the three professors have decided that they must relearn the language of grammar school to get more of their own students speaking at a college level. "I see students who ought to be using algebra in calculus class," says Creese, a researcher of complex analysis, "who instead of writing an equation using variables are going over to the side of the page and trying to do an arithmetic problem. They are so unsure of their algebra that they are going back to the last thing they felt secure with—their arithmetic."

"I was convinced a long way back," he says, "that to correct that means not only dealing with the interface between elementary school arithmetic and junior high algebra but dealing with the elementary-school teachers too."

But Creese says he would not have gone back to grade school on his own. He was set in motion, he says, by Dorfmeister, who swept onto campus "a bit like a hurricane" in fall 1988.

A native of Germany who came to the United States in 1980, Dorfmeister had pondered the status of math education throughout his school days. "I had a good mathematical background," he says. "No complaints. But I feel that teachers get tired, kind of rusty."

wondered whether teachers' boredom might settle on students' shoulders, pushing down success rates. He knew something wasn't working. "Nationally," he says, "40 to 50 percent of students fail their first calculus course."

The spring before he left the University of Georgia to join KU's faculty, he read about a Rice University, Houston, project for teachers to share ideas about methodology, technology and new mathematical fields, such as statistics. By summer 1989, Dorfmeister had launched a similar five-week summer workshop for Kansas high-school and junior-high teachers. The now-annual workshop, funded by grants from Marion Merrell Dow, ShareNet and other firms, attracts 18-20 teachers statewide.

After the workshop's fourth year, Dorfmeister is reluctant to use student performance as a measure of success. But teachers' new enthusiasm may be contagious: Enrollments in Lawrence High School's toughest math courses have doubled during the four years, he says.

After watching Dorfmeister's work, Creese approached his new colleague with an idea: Couldn't he use a similar program to excite elementary-school teachers? Dorfmeister was intrigued. "It is clear that the elementary-school teachers are crucial," he says. "If you turn students on, they have a better chance of staying excited in the long run. If you turn students off, it's hard to turn them on again."

The two began visiting schools and sent a grant proposal to the National Science Foundation. Although NSF declined, the two pursued their interest by attending a Lawrence school district workshop in 1990. They
obtained Kansas Board of Regents funds to help with a similar session in 1991.

Meanwhile Judy Roitman had heard of her colleagues’ quest. It reminded her of her graduate-school days at the University of California-Berkeley in the late 1960s, when she had taught math to elementary students. She had tried novel methods, such as grouping students to challenge answers, and had organized a program for sixth-graders to teach second-graders.

Roitman says her experiences are similar to those the new standards promote. In fact, many research mathematicians involved with the standards, she says, were her fellow students or were influenced by similar projects. "It's like something happened to us in graduate school," she says, "and after 20 years it exploded in the community."

Primed to join Dorfmeister and Creese, she pitched another proposal to NSF, which this time said yes to $500,000. The funds provided $300 during each of the three weeks for participating teachers, who must pass on what they learn to other teachers, administrators and parents. The University will host more workshops during the grant's three years, including one this fall for principals.

Roitman says the project marks the beginning of a long revolution in mathematics education. "Teachers are in a very difficult situation right now," she says. "There are changes in mathematics, reading and science education. They're basically being told, Everything you learned how to do was wrong. There needs to be an incredible retraining of teachers right now if all of these reforms are going to work."

But even though KU is lending a hand, Roitman doesn't think universities should direct reform. Edicts from universities, she says, led an earlier movement, known as New Math, astray. "It had an aura of trouble," she says, "and a lot of that came from the fact that it was largely top-down. Most of the people leading this current movement are people with extensive classroom experience. They're talking from kids' reality."

Lead teachers from the workshop, she says, serve as valuable guides. And several teachers this summer showed that they must begin to retrain by reviewing their own attitudes about math. "We talk about illiteracy, and that it is not acceptable in this country," says lead teacher Jan Dicker, "but innumeracy has been. How many times have we laughed and said, Oh, I can't do my own checkbook, or, I was horrible in math? Those are the messages we send our kids. It's been especially true for girls."

Dicker, a teacher at Grant Elementary School for 17 years who this year received the state Presidential Award for Excellence in Mathematics Teaching, and Beth Cigler, a teacher at Grant for 23 years, shared tricks that they say have taught them concepts they didn't understand for decades—even that pesky Pythagorean Theorem.

Cigler uses colored tiles to explain the theorem. She builds squares along the triangle's three sides, then counts the areas of the squares. The two smaller squares combined are the same size as the big square. Her 4th-, 5th- and 6th-grade students needn't memorize the definition, they understand the concept.

Cigler has adopted another trick to show that the interior angles of any triangle equal 180 degrees. Students cut triangles of any size and mark the corners. They tear off the corners and line them up to make a straight line, which equals 180 degrees. "In the past," she says, "I might have presented a statement: The internal angles of a triangle add up to 180 degrees. You do that for five minutes one day of one year, and it's gone. The next year you do it again because they've forgotten."

Teachers at the workshop cut and tore their own triangles. Then Cigler showed how to build on the concept by presenting a chart of many-sided polygons. With each additional side, the total of internal angles is 180 degrees higher. "When we are talking to these university people," she says, "that's when they jump out of their chairs and go up to the blackboard and start writing down formulas. Well, when these kids are in college those formulas are going to make sense."

Cigler and Dicker this fall moved classes into Grant School's new Math Learning Center, which features four computers donated by IBM. A bookshelf holds buckets of shapes in many colors and sizes; teachers call these models "manipulatives." Boxes of four-part questions encourage group projects.

Many activities integrate math with other subjects. A discussion of pentagrams, for instance, naturally led into an aside about the Pentagon in Washington, D.C. Dicker's students chart and graph the daily temperature and use the statistics to find means, medians and averages; then they talk about average temperatures in Nome, Alaska. These math classes are not silent.

"Too often teachers have used paper activities as classroom management," Cigler says. "When kids are hunched over worksheets, the classroom is pretty quiet. When principals and parents stick their heads in, they think this is a very well-managed class."

But such peaceful activities no longer prepare students to solve adult problems. "Partly because of technology," she says, "we don't have to be as concerned about the computational aspects of concepts... So we're trying to get these kids to really think—and to not waste their time doing 45 long-division problems."

And noisy discussions, she adds, do not tempt children to misbehave. "When kids are actively involved in meaningful projects," she says, "you don't have discipline problems. When you have discipline problems is when kids are bored or when they see the exercises as a waste of time."

Parents of Cigler's students are thrilled to see their children excited about math. "Last year," Cigler says, "about three-fourths of my kids said math was their favorite subject."

Dawn Trent's son, Andrew, is a third-grader at Grant. "I'm just glad to see that my son doesn't dislike math," she says. Trent, a former teacher, and her husband, Danny, an attorney, attended a special Math Night at the school. "My husband and I were impressed by how challenged we were," she says. "And some of this was stuff our kids are doing at 7, 8 and 9."

But the highest praise comes from students. Dicker says, "When your kids are always late to music, art and physical-education classes because you are trying to get them to stop doing math," she says, smiling, "that's a wonderful comment."
Wave the wheat

As Campaign Kansas concludes, the University celebrates the bounty

by Judith Galas
As parties go, Campaign Kansas was a humdinger. Kansas University Endowment Association staff and hundreds of volunteers attended to every detail. Guests not only R.S.V.P.d in droves, but they also came bearing assorted generous gifts. And they tapped hundreds of friends who didn't arrive empty-handed either.

Now the party is over. Campaign Kansas, the most successful fund drive in KU's history, brought commitments of $262.9 million to the Endowment Association's coffers—$122.9 million more than the campaign's modest first goal of $150 million. The event that opened to the public May 12, 1988, with a red-carpet outdoor soiree for 1,000 loyalists officially closed the guest book June 30.

The almost-final figures show funding objectives for five of the campaign's nine priorities were met; in programming and faculty and student support, pledges and gifts far exceeded goals (see table).

"Campaign Kansas has changed the University forever," declared Jordan L. Haines, '49, F75, national campaign chairman, as he announced the total July 1.

Another campaign leader, John T. Stewart III, b'58, at the campaign's end attributed the surprising success to leadership provided by Chancellor Gene A. Budig, endowment staff and volunteers along with support from faculty, staff and devoted alumni. "We had a fantastic drive in every sense," said Stewart, chairman of the Endowment Association's board of trustees and a member of the campaign's executive board. "Our alumni showed loyalty and concern for the University. The Alumni Association played a very big role in maintaining loyalty over the years."

KU had expected its alumni to answer the call. Even the Chicago consulting firm of John Grenzbach & Associates, hired to prepare the feasibility report and then advise and help organize the campaign, predicted strong backing.

"The alumni said they loved KU," recalls Grenzbach's Jack Siefkas, senior campaign counsel. "But unlike many people who say that about their universities, KU's alumni really meant it."

Siefkas, speaking from Peoria, Ill., where he is now executive vice president of the Methodist Medical Center of Illinois, recalls how anxious a proposed $150 million goal made many members of the campaign's Executive Board.

"The feasibility study showed a $180 million campaign absolutely couldn't miss," he says. "But up to that point people had been saying '$100 million.' When I tossed out $180 million, they said they would send me back to Chicago."

The board was nervous about committing to a greater figure. Campaigns must reach their goals—it's only good form—and numbers close to $200 million seemed too high.

Siefkas recalls that all the campaign materials, such as the case statement and press releases, had the spot for the goal left blank until a month before the May party. On April 8, the board decided on $150 million as a reasonable goal. "I remember the day," Siefkas says, "because it was four days after KU won the NCAA basketball championship."

Siefkas praised the Executive Board for its willingness to commit to a higher number. "They were fantastic," he says. "They were alarmed, but they never dragged their heels and said no. That's why it happened."

Campaign Kansas, according to Siefkas, turned into the best campaign Grenzbach & Associates said it had ever seen. "There were larger campaigns going on in the country at the time," he says, "but the potential for KU and its contributions indicated this might be the best one happening."

Siefkas gives a great deal of the credit for the campaign's success to Chancellor Budig. Siefkas recalls that at first some wondered about Budig's ability to pull off a campaign. "But it wouldn't have happened without him," he now says without hesitation. "From the beginning, he truly understood how to do it, how to make it happen."

Siefkas, who joined the campaign in 1986, says he worried the campaign would reach its $150 million goal too soon and lose momentum. "In fact we did reach it too soon," he says. On September 17, 1989, just over a year into the drive, the campaign's executive board announced the new goal of $177 million.

"We based that figure on the number of projects that hadn't yet been funded and added them to the $150 million goal," says Siefkas. "That's how we came up with such an unusual number."

In the campaign's first year, the alumni response surprised even the well-seasoned fund-raisers who had based their $180 million goal on preliminary interviews with 110 of KU's best donor prospects.

"We couldn't anticipate the enthusiasm," says Endowment Association President Jim Martin, g'68. "Some of those interviewed who said they would not contribute to the campaign came through with some of the larger gifts."

Why did the campaign surpass all expectations? Martin, tucked away in his corner office on the second floor of Youngberg Hall, smiles broadly. "Call it poor planning; call it dumb luck. I'll take either."

Anyone who knows the association knows neither luck nor poor planning played any part in its ability to tap a national network of donors. Stamina—emotional and physical—and the willingness to pay attention to never-ending details make a campaign successful.

As Martin is quick to point out, the
The Numbers

On July 1, 1987, the campaign's first goal was $150 million. In September 1989 the goal increased to $177 million, which was surpassed in January 1991. By the campaign's official end on June 30, 1992, gifts and commitments totaled $262.9 million. Campaign leaders identified nine areas for funding. The campaign received $33 million to fund University projects not included among the priorities.

* Did not meet funding goal

The intensity of working on a campaign every day for five years cannot adequately be described to anyone who hasn't lived through it. The daily stress of strategic planning, lengthy meetings, sensitive negotiations, the often necessary secrecy, and minute-by-minute anticipation of donors' needs, reactions, preferences and personalities drains time, imagination and energy.

"It's like being in finals forever," Martin says, his face reddening as he laughs.

While University administrators and campaign workers decided whom to approach and when, the Endowment Association got ready for its first "finals," beefing up and honoring its own organization. When Campaign Kansas started, KU had the largest endowment in the Big Eight Conference and the smallest professional fund-raising staff. "We needed new programs and people for a comprehensive fund drive," Martin says.

When the campaign was ready to roll, so was Endowment. The association had added the corporate- and foundation-giving program, had created the position of development officer and had hired six, added two full-time fund-raisers to the medical school, established the prospect-research office, added two people to the Greater University Fund, and one person, plus another later, to the planned-giving program.

By the time the campaign ended, the association had 15 new professional staffers, more than five years of intensive fund-raising experience, a broader national base of alumni than ever before, and a sophisticated computerized system for tabulating gifts and tracking donors.

This well-tuned fund-raising machine helped bring the campaign to its surprisingly strong close. In the past fiscal year, when the drive had peaked and everyone anticipated a letdown, the Endowment Association saw its best year ever—$37 million in contributions. Eighty-six percent of alumni donors in FY 1992 were Alumni Association members. The campaign had maintained its momentum until the end, attracting alumni who at first had shied away but whose loyalty had brought them to the party just before the hosts turned out the lights.

In the post-campaign calm, Strong Hall administrators are examining the unmet needs of Campaign Kansas and deciding
which will be targeted for follow-up projects. Martin says he expects the association to work with the chancellor to develop special funding projects during the next few years to satisfy both the unmet needs and new priorities.

"The campaign may have ended," Chancellor Budig says, "but there will be no cessation of fund-raising activities for the University's benefit. Only with growing private sources can a state university today be truly outstanding. Here at KU we're fortunate to have an established tradition of giving that foretells good things for the difficult years ahead."

Martin says, "We have marching orders to maintain the campaign's momentum. We'd like to keep raising $30 million a year."

Endowment also stands primed for the next major fund drive. "Going into the next campaign, we won't have many people to add," says Martin. "With our well-seasoned personnel, we'll hit the ground running."

Martin has said KU's next campaign probably will unfold around the year 2000. "A University the size of KU," he says, "should have a major fund drive once every decade." Like Campaign Kansas, the next drive most likely will focus on enhancing programs—scholarships, fellowships, funds for faculty—not brick-and-mortar projects.

The year 2000 is not too soon. Siekasz says, for even weak economic times won't affect major donors, who aren't as vulnerable to fiscal downturns. The formulas say people who gave $1 million in the 1980s will have recovered that amount by 2000 and will have another $1 million available.

And the next campaign's goal? Martin says it's far too early to predict one.

"There are just too many variables," he says. "We'll have to take time and examine the University's priorities." Martin admits, however, that typically subsequent campaigns open at figures above past efforts.

Siekasz comes back with "oh, boy" when asked to suggest KU's next campaign's goal. "I can recall a time or two in Kansas where my prediction that Campaign Kansas would reach $20 million brought a rolling of eyes."

And from the safety of his Peoria office, he lets go with a laugh.

—Judith Galas, g '82,

is a free-lance writer in Lawrence.
How gifts are counted

The Campaign Kansas total of $262.9 million represents the actual or assessed value of the gifts made to the campaign. Not every million-dollar gift, for example, actually was tabulated as $1 million in the campaign's ledgers.

A gift that came in the form of cash or publicly traded securities was credited toward the campaign at its face value. However, the same gift coming through life insurance, a will or a charitable remainder trust was counted differently. The younger the giver at the time the deferred gift was made, the smaller the amount that was counted.

For campaign purposes, $1 million in life insurance might be discounted to $100,000 if the donor was younger than 45, or to $300,000 if the donor was 60 through 64 years old. A gift by will, then, also was discounted according to the donor's age. A $1 million bequest, for example, was valued at $700,000 if the donor was 60 through 64 years old; the same bequest was counted as $100,000 if the giver was younger than 40.

Charitable remainder trusts allow donors and a beneficiary to receive income throughout their lives. When the donor and the beneficiary die, the trust assets go to the Endowment Association. Such gifts were counted based upon the age of the youngest life beneficiary when the trust was established. If the principal was $1 million, the gift was valued at $500,000 if the youngest beneficiary was 60 through 64 years old; it was worth $400,000 if that person was 50 through 54 years old.

Many of the larger university fund drives going on at the same time as KU's counted the full value of their deferred gifts into their campaign totals, says Jack Sieffs, senior counsel to Campaign Kansas. "So some campaign totals looked much larger than they actually were," he says.

The Endowment Association developed its campaign guidelines five years ago in accordance with the Management Reporting Standards established jointly by the National Association of College and University Business Officers (NACUBO) and the Council for Advancement and Support of Education (CASE).—JG

How gifts pay off

Because 63 percent of the gifts to Campaign Kansas came in the form of cash, many members of the University family have felt immediately blessed. The Presson Scott Shane Memorial Scholarship, the Donald Sloan Curatorial Internship, the Jordan L. Haines Professorship in Business, and more than 58 million in grants from the Wesley Foundation in Wichita are representative of hundreds of gifts that are working right now for students, faculty and departments on the Lawrence, Kansas City and Wichita campuses.

At the University of Kansas Medical Center campus in Kansas City, the Sutherland Institute for Facial Rehabilitation, started by a $1.5 million gift from Dwight, '45, and Norma, '45, and the late Robert O. Sutherland, '42, will open its doors this fall to patients disfigured by birth defects, burns and accidents.

On the Lawrence campus this August students moved into the Amini Scholarship Hall, made possible by a $1 million gift from K.K., '49, and Margaret Wenski Amini, c'46, of San Antonio.

In the electrical and computer engineering laboratories, gifts from Duane E., e'52, and Marlene Dunwoodie of Los Altos Hills, Calif., and the Hughes Aircraft Co. of Los Angeles took under-equipped and marginally effective facilities and turned them into state-of-the-art labs.

"Campaign Kansas significantly benefitted both labs," says James Roberts, c'66, chairman of the department of electrical and computer engineering.

The Dunwoodies' gift of $500,445 established the Dunwoodie Laboratory Equipment Fund, which gives the department about $254,000 each year to spend. The $100,000 Hughes pledge, paid over four years, provided specialized equipment, such as communication and digital signal work stations and two spectrum analyzers, for the telecommunications lab.

The Dunwoodie money revamped the 30-year-old microwave lab. "Some of that equipment was so old, it was there when I was a student," Roberts says and shakes his head. "Students complained because the outdated equipment thwarted them during experiments."

No more. With the Dunwoodie money, plus matching funds from the National Science Foundation, cash from Allied Signal, software from Tektronix, equipment from Hewlett-Packard, and some money from KU, the microwave laboratory is now one of the best in the country.

Roberts credits Sivaprasad Gogineni, associate professor of electrical and computer engineering, with orchestrating and fine-tuning the lab and the equipment purchases.
"One day Gogineni came to me all excited,' Roberts recalls. 'He showed me a piece of paper with squiggles—a design circuitry. I'd seen electrical design circuits before, so I said, rather vaguely, 'that's nice.' But then he told me the drawing was the first of its kind to ever be made in our lab."

The telecommunications lab, on the other hand, wasn't so much outdated as ineffective and unfocused, Roberts said. So, with the Hughes funds the department bought equipment that enabled students to demonstrate the more sophisticated ideas of systems engineering.

"We're constantly getting rave reviews on the lab," Roberts says. "Students love it, because now their experiments demonstrate principles on a much higher level than if they had to work with more elementary equipment."

Gifts like the Dunwoodie endowment, when combined with other funds, give the department significant buying leverage. "We'll try to use that money to match funds and attract other resources so we can double, triple or quadruple our buying power," says Roberts.

That kind of power buying is critical for the School of Engineering, which increasingly finds itself mercilessly squeezed between the pressing need for sophisticated equipment and the realities of a state budget that doesn't stretch far.

State funds, Roberts says, are hopelessly inadequate for modern engineering education. "State money helps with maintenance contracts, software, repairs and upgrades, but you need gift funds to purchase pieces like a network analyzer at close to $200,000."

The figures prove Roberts right. His $24,000 equipment line, plus another $20,000 he can scrape from the department's budget, doesn't begin to meet his needs.

"With eight teaching labs you can barely do a butter spread to buy equipment at about $5,000 a lab," he says. "We'd be nowhere if it weren't for grants and donations from individuals and companies." —JG

**Gifts to benefit KUAA programs**

Three recent gifts have pushed the total in campaign gifts and pledges for the Alumni Association to $3.6 million.

Kenneth M., b'39, F'47, and Ruth E. Hamilton, La Jolla, Calif., committed $252,000 to the Alumni Association as part of a $1.2 million to the University that also will fund the schools of business and law, the athletics department and the University's unrestricted purposes. Ken Hamilton is a director of the La Jolla Bank and Trust Co. and former leader of the San Diego alumni chapter. He is a life member.

William M., b'52, and Carolie Miller Houglund, assoc., Wichita, have committed $276,852 to the Association as part of a $1.2 million gift through a charitable remainder trust. The rest of the funds will benefit the athletics department, the Spencer Museum of Art and the business school.

Bill Houglund, who became the Association's national chairman July 1, is a consultant to Koch Industries and former president of Koch Oil. He served on the Association's board from 1980 to 1985 and has led the Wichita alumni chapter. A member of the Kansas Sports Hall of Fame, he played on KU's 1952 national-champion basketball team and is a two-time Olympic gold-medalist. He and Carolie are life members.

William R., c'32, and Avis Rae Taylor Hagman, d'32, Pittsburg, have given and pledged $306,743 to the Association as part of a $250,000 gift to KU that will support the Williams Educational Fund and the University's unrestricted purposes. Bill Hagman is former chairman of Hagman's Inc. of Pittsburg and F.S. Edwards Tobacco Co. of Kansas City, Mo. He served the Association as national president in 1972-73 and has led the Crawford County alumni chapter. For his longtime service to the University, he received the Fred Eilsworth Medallion in 1978. The Hagmans are life members. —JG
Fast on the field, slow in the classroom. Not long ago, the Kansas football program typified the dumb jock stereotype. Jokes flew around rival campuses: “Student-athlete” had become an oxymoron in Lawrence, they jeered.

How bad was it here? You could have played an 11-on-11 pickup football game—with substitutes, to boot—if you’d assembled all the Jayhawk gridiron alumni who dropped out or were declared ineligible from 1983 to 1985.

Seven years and three football coaches later, the Kansas department of intercollegiate athletics can tell a different story. A commitment to academics, backed up in word, deed and dollars, has restored meaning to “student-athlete.” The Jayhawks now are fast afield—and up to speed in school.

The Kansas academic regimen appears to contain the right ingredients. Athletics Director Bob Frederick recalls that the tide of ineligible players and subsequent on-field disasters brought rumblings from some boosters that the University should follow some other schools and create an easy graduation track for academically at-risk student-athletes. Kansas couldn’t hope to win any other way, they argued.

Fortunately, he says, that notion was dismissed. “We knew we didn’t have an easy curriculum here,” says Frederick, d’62, g’64, EdD’84, who in May 1987 succeeded Monte Johnson, b’59, g’67. “But we found a way to work within the institution and not sacrifice the meaning of a KU degree.”

Frederick points to the Strategic Learner Apprenticeship Program, a pilot project since 1988 with KU’s Institute for Research in Learning Disabilities. “Strategic tutors”—trained in the Institute’s methods—help academically at-risk student-athletes do more than pass courses and stay eligible for competition. They teach students skills they need to survive and prosper in college and in life. Their students learn how to
MAEN

study efficiently, take notes, manage their schedules, and read textbooks and apply the information meaningfully. The goal is independence from tutoring.

Overseeing the work is Mike Hock, a research scientist at the Institute who receives half his salary from the athletics department. Hock is associate director for the Academic Achievement Center, the umbrella over the strategic learner program. Before coming to KU two years ago, Hock had spent 18 years in Iowa as a teacher and counselor, specializing in learning disabilities. "He is every bit our Glen Mason or Roy Williams," says Don Deshler, director of the Institute for Research in Learning Disabilities. "He's first-class all the way."

Guided by the experiences of the strategic tutors, Hock has tailored study approaches for most of KU's introductory "weed-out" courses, including English 101 and 102, Math 002 and 101, and Western Civilization 234 and 235. Academic background, college entrance exam scores, GPA and diagnostic testing measure the academic assistance a student may require. All freshmen and transfers take diagnostic tests in algebra, reading and writing.

By targeting at-risk students, Hock says, there's a better chance to teach them the skills they need to make it through college on their own. Now entering its fifth year, the alliance between researchers and the athletics department has inspired new studies at the institute and has helped dozens of student-athletes stay in school. It has grown from serving 14 varsity men in 1988-89 to 75 Jayhawks from various sports in 1991-92.

The Academic Achievement Center also provides tutors to student-athletes who are not at-risk. Last year another 75 athletes who needed help in specific classes used the center's "content tutors"—good students who are hired for their knowledge of math, English, physics, economics. This fall many of the content tutors will receive instructional training researchers want to see if it raises their effectiveness.

These services are not cheap. Paul Buskirk, the assistant athletics director who oversees the academic support and counseling—called Student Support Services—notes that, in the past seven years, annual departmental funding for his area has increased nearly 250 percent, from $120,000 to $395,703. He says the investment is grading well. About 40 percent of all student-athletes now receive some tutoring, he says, and, in the past 2.1/2 years, the number of Jayhawk Scholars—varsity athletes with 3.0 or higher semester grade-point averages—has increased from 153 to 157. This year the Academic Achievement Center will employ 12 strategic tutors and about 35 content tutors to serve more than 200 student-athletes.

Mike Hock's counterpart in Buskirk's camp is Wayne Walden, who runs the Counseling Center. Walden says too many athletes, especially in football and men's basketball, can't see past the Saturday glory. He hits them with reality: The average NFL career is less than 4 1/2 years. Only 260 players make NBA rosters each year. Even if an athlete has the talent and luck to survive the cut, an injury can end a career in an instant. And one or two bad investments can shatter any financial security provided by a fat pro sports contract.

Walden asks each student-athlete to imagine that he or she is 75 and dying. What is it you have to do now to look back on a successful life? "I'm trying to get them to look long-range, beyond athletics," Walden says. "I help them plan their next move after KU and after their playing days are over."

He also arranges workshops on subjects like drug and alcohol abuse, eating disorders, sexually transmitted diseases, suicide prevention and date rape. And, when students need listeners, he and his staff lend their ears.

"We're interested," he says, "in seeing these men and women develop fully as human beings."

Like any comeback story, this one began with despair. In fall 1984 the Jayhawk gridiron was declared academically ineligible. The following fall 13 players were kept academically; many more teetered dangerously close, as later evidenced by a 2.08 team GPA. In October 1984 Kansas Alumni reported that of the 19 junior-college players Coach Mike Gottfried had signed in spring and fall of 1983, three remained on campus; of the 37 players signed overall, only 16 were eligible.

Gottfried tended to blame faculty for the problems; he invoked the United Way "people helping people" motto, which to many sounded like a plea for special treatment. When the University of Pittsburgh courted Gottfried after the 1985 season, he eloped in a heartbeat.

Left in the lurch with recruiting season looming, KU promoted assistant coach Bob Valesente.

Philosophically, Valesente and Gottfried differed considerably. Valesente drew an academic hard line with his players, setting the tone for change. He instituted mandatory class attendance and study halls and penalized players who broke the rules. He wanted players to stay for four to five years and graduate. His recruitment, he said, would focus on signing at least 100 per cent high-school seniors. With an eye toward long-term success, he redshirted most of his two freshman classes, hoping they would start well academically and socially and beef up physically.

Vai's plan worked off the field: The team progressed from the 2.08 cumulative GPA of fall 1985 to 2.48 by spring 1987. At the time, Paul Buskirk said, "Considering you are talking about (averaging) 90 to 95 people, that's quite a jump."

But there was just one problem. Valesente lost too many games. The Jayhawks may have performed better in class, but they flunked on the field. Attendance plummeted. Valesente was fired after KU limped to a 1-9-1 record in 1987—a move protested by many faculty members who were impressed by his commitment to academics.

When he hired Glen Mason that December, Frederick hoped he'd found a coach who could win in both arenas.

By the time Kansas started 1988 fall drills, however, Mason worried whether he'd have enough players to field a team. Eighteen players had left for various reasons, including poor grades. KU had only 64 scholarship players, 31 below the NCAA limit. Twenty-five of those were freshmen and transfers.

Mason knew about the past ineligibility problem and, with a thin roster, he knew he couldn't afford to lose players to grades.

He went to Frederick with his concerns. Frederick knew precisely where to turn. Chancellor Gene A. Budig, he says, has been his constant ally. "His commitment to winning the right way never has wavered," Frederick says. "Leadership in this kind of effort has to come from the top of the institution."

With Budig's blessing, Frederick called Judith Ramaley, then the executive vice chancellor for the Lawrence campus. Phones started
jangling. Eventually Don Deshler answered the call. Until then, work at the Institute for Research on Learning Disabilities had focused on junior-high and high-school students. Deshler was willing to try applying the methods to college. In one weekend, he and research scientist Jean Schumaker designed a pilot program.

A dozen football players formed the initial group; two men's basketball players soon joined. Two years later, women's basketball players were welcomed and, last year, the program opened to all scholarship athletes judged to be at risk.

Mason has not had to announce a single academic ineligibility, and attrition has been negligible. This fall, counting walk-ons, Kansas will suit up 100 football players.

The term "at risk" simply refers to the potential for struggle in class. But varied obstacles can force a student to play catchup.

Many inner-city young people are underprepared for the college classroom. Cultural differences, limited finances, poor schools and developmental disabilities all can contribute. So can emotional and physical turmoil: The death of a loved one or breakup with a love can send a good student into a tailspin. A health problem—a sports injury, perhaps—also can hobble studies.

At-risk college students also often lack role models. They may be the first family member to attend college; some may be the first to finish high school.

Traditional tutoring emphasizes course content. But many at-risk students don't understand, for example, how to read a textbook, extract the important information and put it in their own words. Strategic tutors show them how to do it in the context of each course. In English, for instance, they may begin by having the student read a paragraph or section out loud, say what they think it means, then write down the key ideas. The approach is more intensive and time-consuming, but it works, Mike Hock says.

"Using traditional methods, if you tutor an at-risk person as a freshman, you're probably going to be tutoring that person as a senior," he says. "We're trying to develop an independent learner so we won't see as much of him or her as a junior or senior."

Men's basketball player Richard Scott, for instance, has progressed miles. "He's at the point where he's driving the system now," Hock says. In fact, he's become a role model for younger student-athletes.

"I feel very fortunate that I got the help," says Scott, Little Rock, Ark., junior. "I wasn't ashamed to ask for it. I could never be ashamed because I'm here to learn. And I tell that to the younger guys. I tell them, 'If it worked for me, it can work for you.'"

Scott sounds a lot like his coach, Roy Williams, who speaks to players about academics every day. "The night I was interviewed for this job," Williams says, "I said it would be fine if some day they told me they had no money for new uniforms or for taking a plane somewhere, but it won't ever be OK if they told me they couldn't hire tutors for the student-athletes. With me, failure to make a free throw is never as important as failure to make a class."

Like Williams, Don Deshler wants players to make both foul shots and class. In fact, he's intrigued by the imagery exercises sports psychologists use to calm athletes for repetitive moves like free throws. He wants to try such techniques to quell academic anxieties.

Such research issues, Deshler says, would not have occurred if the program had remained within the athletics department. Also, Bob Frederick notes, skeptics might dismiss it as window-dressing if it were in-house. "Keeping Mike Hock's appointment 50-50 gives the program integrity," he says. "It keeps us continually on the cutting edge. I feel incredibly fortunate. They're the best in the country—maybe the world—at what they do, and we're a part of it."

When he talks about the program, Deshler likes to quote an old proverb: "Give me a fish and I can eat for a day; teach me to fish and I can eat for a lifetime." At many schools, he says, academic-support programs for athletes are content to serve fish. "There is not," he charges, "a great deal of thought given to making them fishermen."

Now in its 15th year, the Institute is devoted to turning out fishermen—and women. Based in the Dole Human Development Center, it has landed more than $8 million in grants during its existence and has trained more than 50,000 teachers throughout the United States, Canada and Australia.

Ultimately, the researchers hope the athletics department's light-hose program can shine across campus and to other schools. But they remain cautious. "We're still in the developmental stage," says Deshler. "We've had to accelerate and streamline methods that proved successful at the high-school level. Every semester has presented a new challenge. We need to analyze where we've come and think some more. But the results are definitely encouraging."

Many at-risk students, Jean Schumaker says, believe that their ability to learn is fixed. "We have to convince them they can change as learners," she says.

Schumaker is sharpening her focus on student-athletes' self-image. This fall she'll ask freshmen how smart they think they are and what they expect to do in college. She wants to track changing thoughts throughout their KU years, perhaps to find intervention methods that can reach reluctant scholars.

"Some of these student-athletes are two totally different persons," she says. "They walk onto the court or the football field and they are confident; they believe they can win. They walk into the classroom and they are reeled with anxiety." One hypothesis is that some athletes believe they are smooth, naturally gifted physical competitors who turn into klutzes in the classroom. "We have to convey that it's the hard work in practice that
Mike Hock knows struggling students need encouragement—fast. For those lacking study savvy, certain tools can produce quick, tangible results.

To emphasize his point, Hock demonstrates a technique called visualization. 'Let's say that for an English class you need to remember that Joseph Conrad wrote a book called Victory,' he says. 'It's easy to get a mental image of victory: fingers forming a V. It's not so easy to get Joseph Conrad, but then maybe you remember the fat actor who played the detective Cannon on TV, William Conrad. You picture him raising his hand in the courtroom, you see the victory sign and you make the connection: Conrad and Victory.'

It sounds ridiculous, but Hock says it's not: "Our studies have demonstrated that the more bizarre the image is, the better it seems to work." Most important, once students know they can complete varied tasks, they begin modifying them to suit their needs—a first step toward becoming independent learners.

Memorization stunts alone, of course, won't get anyone through college or life. Neither will hand-holding. So the strategic tutors are trained to ask pointed questions.

Danette Knowlton, a graduate student in anthropology, is in her third year as a strategic tutor. Instead of doing the homework for a student, Knowlton says, 'We ask, What's your plan? How do you study? How do you read a textbook? How do you take notes? We identify what they're doing that works, then build on that.'

She has seen the program work. One student who once was dangerously close to failing KU, she says, recently turned in a Western Civilization paper anyone would be proud to have written. After absorbing the writings of philosophers like Nietzsche, Huxley and Darwin, she says, he wrote a paper expressing his personal thoughts about natural rights, applying those ideas to the May riots in Los Angeles.

Lonnie Worthington, a Topeka senior in electrical engineering in his second year as a strategic tutor, says he sets high expectations for students, then celebrates each step forward. "I think that the cheers they receive from tutors when they've been working hard on a math concept and finally understand it are just as important as all those voices from the stands," he says.

Richard Scott concurs. "When I get a good grade, it's even better than making a good play on the basketball court. I have to work hard at both, but school comes tougher for me. To do it on my own is a special feeling.

"You only have two semesters a year to show what you can do in school. In a game, if I mess up, I know I've got another half or another game. In the classroom, there's more pressure."

Stories like Scott's balance the occasional letdowns. Paul Buskirk admits not all athletes buy into the program immediately; some, spoiled by special treatment, never will. "There are some days when I want to throw some of the freshmen out of the building," Buskirk says, "and these are the same kids who two years later are among my favorites. They can be nightmares, but they're just 18-year-olds and they're growing up. Most times, your patience is rewarded tenfold."

Early last fall, Kansas swimming coach Gary Kempf challenged his women's team to reach three goals: the Big Eight title, a Top 15 finish in the NCAA championships, and a record-high team grade-point average.

The Jayhawks went three for three. They won KU's 12th league title, splashed to 19th at the national meet, and banded together for a 3.08 GPA in the spring that was the best of any Kansas varsity team. The men swimmers, with a 2.97 cumulative GPA, weren't far behind. With 25 members on each squad, Kempf points out, a slowpoke or two can sink the GPA fast.

'I talk a lot about our tradition of success in and out of the pool,' he says, 'I'm not asking them to do something that hasn't been done before.'

Senior Barb Pranger, a four-time All-American, responded with a 3.97 GPA that led the team. She is one of two KU women athletes in 1992—basketball's Kay Kay Hart, a 3.71 pre-med major, is the other—who won NCAA Postgraduate Scholarships, and she's the Kansas nominee for NCAA Woman of the Year, which rewards academic and athletic accomplishment and community service.

Kempf says he doesn't hesitate to recruit at-risk student-athletes. 'If the individual has a good work ethic,' he says, 'I know he or she can make it here if they buy into the support program. Our program gives us a definite recruiting advantage.'
Coaches vow to improve mid-'80s graduation rates

All college coaches say they stress the "student" in "student-athlete." After all, it's their job to say so. Thanks to the NCAA's toughening standards, there are so many born-again educators in the coaching ranks that even the sincerest can sound hollow.

Glen Mason, who has consistently backed up tough words on academics with tough actions, clearly sees reality. Graduation rates, attrition rates, GPAs all are important, he says, but no one wants to hear about those things once the season starts. "From the first week of September until Jan. 1," he says, "it's Tell me how many games you won."

Few coaches, he says, will keep their jobs if they graduate 90 percent of their players but win only 40 percent of their games. "But if you graduate only 40 percent but win 90 percent of your games," Mason says, "you will be coach for a long, long time." It's much easier, he adds, to win in one area than in both.

This summer, when the NCAA released its six-year graduation rate statistics from the freshman classes of 1981 and 1984, Kansas fell somewhere in the middle at 50.3 percent overall. The graduation for all KU freshmen in the same period was 54.2 percent. Compared to the majority of schools, KU looked just average.

Recruiters now must show a recruit their institution's rates before the recruit signs a national letter-of-intent. The rules will chiefly affect football and men's basketball recruiting, and Mason and Roy Williams know schools with better graduation rates will use the numbers against them, even though neither coach was at Kansas in '83 and '84. They say they'll let their records speak for today's program. KU's graduation rates, they say, will improve.

In his five KU recruiting classes, Mason points out, all 14 players he has signed from Detroit are still in school and on track to earn degrees. In the same time at other major-college programs, he notes, 50 percent of Detroit football recruits have dropped out. And, not including transfers, 81 of the 95 seniors (85.3 percent) Mason has coached since 1988 have graduated or are continuing to pursue their degrees.

Williams can point out that 14 of the 16 seniors he has coached in his four years at KU have either graduated or are still working toward a degree. In addition, he has helped several Jayhawks who didn't play for him return to resume work on their degrees.—BW

New attitude helps Stubblefield sack Proposition 48 label

Dana Stubblefield is one of the best football players from the Cincinnati area in recent years. In 1988, his senior season at Taylor High School in Cleves, dozens of coaches courted him. The 6-3, 260-pound 17-year-old made 52 unassisted tackles despite playing in only five games. Recruiters drooled.

But Stubblefield didn't hit the books. "I barely did the work to get by," Stubblefield says. "I wasn't serious about school at all."

As a result, the blue-chip prospect was thrown for a loss. He failed to meet Proposition 48 requirements.

When Glen Mason visited Stubblefield and his mother, he didn't talk about football. "He talked about me as a person, as a student," Stubblefield says. "That opened my mom's eyes, because he was the only coach who did that."

Stubblefield signed with KU. He sat out as a freshman, forfeiting a year of eligibility and struggling in class. Expecting favors, he was unprepared for the responsibility his tutor handed him.

"When I first came here and they said, This is going to be your tutor, I said, Cool. She's going to do all my work for me," Stubblefield recalls. "I was surprised when she said she could help me, but I had to learn to do it on my own."

Now a senior and pre-season All-American, Stubblefield is ranked among the top five defensive linemen nationally. Barring serious injury, he will be an early-round NFL draft selection. He also is on track to graduate in spring 1994 with a degree in human development and family life. After his football career, he says, he hopes to work with disadvantaged children. He has stayed in Lawrence the past two summers counseling kids in the National Youth Sports Program.

He now earns B's and C's. Last spring his GPA climbed to 3.18. "I wouldn't have believed it," he says, "if you'd told me I could do that three years ago."

Now, he says with a grin, he's as confident in class as he is when terrorizing quarterbacks.—BW
Offices assist non-athletes

How does the University help struggling students who aren't athletes? One place they can turn for free academic help and general counseling is the Center for Academic Support, formerly called Supportive Educational Services.

Director Karen Seals, Ph.D., says CAS currently serves about 250 students annually. Because the program is federally funded and monitored, it is limited to low-income, first-generation college students and students with disabilities who have demonstrated a need for academic assistance, either through entrance exam scores, GPA or diagnostic testing. The program was created by the 1965 Higher Education Act.

If a student does not qualify for CAS help, he or she can take advantage of the Student Assistance Center, which maintains lists of tutors for hire and conducts free workshops on stress reduction, time management, essay-writing and note- and test-taking.

Seals became CAS director last November and began revamping the program. One of the first things she did, in fact, was call Paul Buskirk to ask about the athletics department's program. "We shared with her everything we're doing," Buskirk says.

Seals has expanded CAS' counseling staff from one to three, hired two tutors who will specialize in English and math, added a lab for computer-assisted instruction and initiated study groups to complement the tutoring. Next summer CAS will abandon its quarters in the former Military Science Building annex for a more visible space in Strong Hall.

Seals also has worked with the Office of Admissions to identify first-generation college students. She hopes to work with the Office of Financial Aid to identify low-income qualifiers. Soon, she says, she'll have better lists of at-risk students to recruit, which will expand CAS' reach. Seals says the need is there. For instance, about 5,000 KU students annually receive federal Pell Grants, which are awarded to students from low-income homes. Not all of them need CAS' help, but Seals points out that the University of Missouri's CAS program is better-funded and serves about 1,000 students yearly. She has studied MU's program and hopes to expand KU's to a similar scale.

Funding this year comes to $304,556 in federal and state grants. CAS will employ 50 tutors in the academic year.

CAS counselors also meet with students to talk over financial concerns, part-time jobs and graduation plans—or sometimes just to listen. "We think of it as advocacy," Seals says. "We're helping them learn to survive in a large institution that they aren't necessarily equipped to deal with right away."—BW
3 alumni to receive Ellsworth medallions

The recipients of the 1992 Fred Ellsworth Medallion, the Alumni Association’s highest award for service to the University, are W.C. “Dub” Hartley, Mission Hills; Todd Seymour, Lawrence; and Deanell Reece Tacha, Lawrence. The Association’s Board of Directors will host a dinner in their honor Oct. 9 at the Adams Alumni Center.

The Association has awarded 92 medallions since 1975 in memory of Fred Ellsworth, the Association’s longtime executive secretary, who retired in 1963 after 39 years of service. Recipients are chosen by a committee of representatives from the Chancellor’s Office and the Alumni, Athletic and Endowment associations.

Hartley, b.46, is chairman emeritus of the Miami County National Bank, Paola. He was president of the Kansas Bankers Association from 1978 to 1979. He also chaired the Communications Council and was on the board of directors of the American Bankers Association.

As investment director for the Louis W. and Dolphia Baehr Charitable Foundation Trust, he has helped arrange many generous contributions to the KU Medical Center, the Baehr Auditory Research Center and the Doile Human Development Center. He serves on the Medical Center Advisory Council.

In 1990 he, his wife, Pat Ferguson Hartley, c.47, and their three daughters established a fund for the W.C. Hartley Family Center for Hearing Impaired Children in the Medical Center’s department of hearing and speech.

The Hartleys are joint life members of the Alumni Association and members of its Development Committee, which communicates the needs of higher education to the Kansas Legislature.

He is a past member of the Greater University Fund Advisory Board, the Campaign Kansas National Council and Medical Center Fund-raising Committee. He and Patricia have been Chancellors Club and Williams Educational Fund members since the funds began, and they supported the building funds for the Anschutz Sports Pavilion and the Sumner Hall Addition.

He also serves on the School of Business Board of Advisors and is a former trustee for the School of Religion.

His daughters are Elizabeth Winetroub, d.71, g.73, Leavenworth; Laura Lintecum, d.75, Mission Hills; and Anni Bush, j.79, Lawrence.

Seymour, j.50, is former president of the KU Endowment Association. He enjoyed a 32-year career with the association, beginning as assistant director of the Greater University Fund in 1959 and rising to GUF director, managing director for the Program for Progress, assistant executive secretary, corporate secretary and president, the leading management role for the organization. He was elected president of the Board of Trustees in 1974 and served until he retired in 1991.

During his term as president, the Endowment Association’s investments increased from $44 million to $287 million and annual direct support to the University grew from $7.5 million to $33.6 million. He also served on the Executive Board and Steering Committee for Campaign Kansas, which raised $262.9 million between July 1, 1987, and June 30, 1992.

As president, he was instrumental in founded the Alumni Association’s Kansas Honors Program, which honors the top 10 percent of Kansas High School seniors, through identifying funds for the program’s Crowell Book Award. The award provides a personalized American Heritage Dictionary to each Kansas Honor Scholar.

He also led the Endowment Association’s support for construction of the Adams Alumni Center as a member of the center’s planning and building committee.

He is a former director for the Ameri-

For Members Only

Making a list and checking it twice: It’s not too late to order the 1993 Directory of Members and Graduates. The Alumni Association will accept orders through Nov. 1 and deliver the directories in spring 1993.

The directory will list all KU graduates and Association members alphabetically, by class year and degree, geographically and by occupation. For members, the cost is $29.95 (softbound) or $39.95 (hardbound). Non-members pay $69.95 (softbound) or $79.95 (hardbound).

Even if the directory isn’t on your wish list, please return the order form we sent you to update your address, phone number and job title. Please return the form even if the information we sent is current: we’d like to verify our accuracy. If you’ve lost the form, call (913) 864-4760 for a replacement.
can Alumni Council, now known as the Council for Advancement and Support of Education (CASE). He received the 1976 Distinguished Service Award from the Mid-America District of CASE for his fund-raising and alumni relations achievements.

He and his wife, Jeannine Barnes Seymour, ’53, are joint life Alumni Association members and Chancellors Club and Williams Educational Fund members. Their daughter is Ann "Bunny" Seymour, ’80, Amsterdam, the Netherlands.

Tacha, ’68, is a judge on the 10th U.S. Circuit Court of Appeals and a former KU law professor and administrator. After earning her law degree at the University of Michigan, she was named a White House Fellow for 1971-72 and practiced with a Washington law firm before returning to KU in 1974. She directed the Legal Aid Clinic and served as a professor and associate dean in the School of Law. She became associate vice chancellor and, in 1981, vice chancellor for academic affairs. President Ronald Reagan appointed her to the federal court in 1985.

As a KU volunteer she has been especially involved with the Alumni Association. She was national president from 1988 to 1989, executive vice president the previous year and served on the Membership Development and Services, Awards and Recognition, Campaign Kansas Liaison, Development, Finance and Adams Center Director’s Search committees. She continues on the Executive, Communications and Information Systems committees and is a member of the Task Force on Corporate Sponsorship. She also has served on the Adams Alumni Center Board of Governors and its Long Range Capital Needs Task Force.

She has assisted the Endowment Association as a member of the Campaign Kansas Steering Committee and School of Fine Arts Fund-raising Committee. She is an Alumni Association life member and she and her husband, John, are Chancellors Club and Williams Educational Fund members. She also serves School of Fine Arts, Hall Center for the Humanities and College of Liberal Arts and Sciences advisory boards.

**ALUMNI EVENTS**

**October**

12 Sedgwick County: Kansas Honors Program
14 Salina: Kansas Honors Program
15 Omaha: Chapter Meeting

**Season opener**

The TV Guide to KU basketball pre-games and television parties is coming soon. For a schedule of games, see page 7. In the meantime, get ready for the first pre-game of the season in Indianapolis.

**EVENT:** Pep rally before the KU-
Indiana basketball game Dec. 5
**TIME:** 2-3:15 p.m. (EST). Tipoff at 3:45
**PLACE:** White River Ball Room of the Indiana Convention Center (connected
to the Hoosierdome)

**COST:** $/$ per person, includes hot dogs, hot wings, chips, pretzels, fresh
veggies and dip, raffle ticket and pop corn.

**RSVP** by using the form below.

**GAME TICKETS:** Call 1-800-34 HAWKS.
Ask to sit in the KU section.

**ANY QUESTIONS?** Call Larry Heck at
(317) 929-8361. Mal Applegate at
(317) 633-9135 or Jodi Breckenridge at
the Alumni Association. (913) 864-4760.

KANSAS ALUMNI MAGAZINE 31
Prime Times by Calder Pickett

If you are like some students to whom I taught History of American Journalism for 30 years, then you probably shudder when you hear the very word "history." Maybe you, like Henry Ford, think history is "bunk." All those names, all those dates, all that dull detail.

Or maybe you’re like a few of my students who could tell you every batting average going back 100 years but who didn’t think of that as history. Maybe all the family memories, all the reminiscences of your years on Mount Oread haven’t yet registered in your mind as "history."

But history they are—University history, which will fill this and articles to follow in future issues of Kansas Alumni. My source is a vast repository of KU lore, the Oral History Project of the KU Retirees’ Club. The club meets in the Adams Alumni Center in space provided by Paul Endacott, ’23. The volumes now sit on shelves in the club library and in the University Archives in the Kenneth Spencer Research Library.

The project, which began in 1982, was the inspiration of Chancellor Emeritus Raymond Nichols, c’26, g’28. He has been assisted by a committee that after 10 years has succeeded in recording and transcribing the stories of many people who helped make history at the University.

I have done about 75 of these interviews. Many other people have been at work, laboriously transcribing and editing the conversations before they are bound and placed on the shelves.

I survey the volumes and see all the familiar names. I think about the people who aren’t there: journalism colleagues Dean Burton Marvin, Elmer Beth, Emil Telfe; deans such as George Waggoner and Ken Anderson; people such as Phog Allen. But I also see those we have interviewed and all the insights that emerge in each story.

How did people happen to come to KU? How did they get the jobs they held for so long? One of the people interviewed, of course, was Raymond Nichols.

"I had a call from the Chancellor [Ernest Lindley]. I was playing handball at the YMCA. He somehow found me and said, I’ve got something I want to talk to you about. So we made an appointment, and he offered me the job. John Dyer was a key to that. John Dyer, the dean of men, with whom I’d worked, had confidence in me. So I was... to be the permanent secretary of the budget committee, which... the Chancellor had established when he came here in 1920 from Idaho... I kept all the records, made up the budget, submitted it to the Board of Regents... made all sorts of analyses."

The oral histories try to reach back to childhoods. What made a person such as Charles Michener one of the world’s most distinguished entomologists? Michener shared this memory:

"I somehow found out that at the University of Colorado there was a man named T.D.A. Cockerell, who was the principal bee specialist in North America, and so I wrote him and said in a naive sort of way that I had identified these things, or tried to, and could I send him some to see if I was right. He wrote back with some enthusiasm and said, yes, of course, and so I sent 15 or 20 kinds of bees, and he sent them back after a few weeks. Some of them were wrongly identified and he had given me the right names and some of them I had right."

The interview manuscripts are filled, of course, with details on teaching and administrative duties. One unusual job belonged to Henry Fitz, professor emeritus of systematics and ecology, who operated KU’s Natural History Reservation (now named for him) northeast of Lawrence:

"The area had been used, mainly free of charge, by local farmers for pasturing their livestock. Parts of it were quite heavily overgrazed. When it was taken over for biological studies domestic animals had to be taken off. We tried to exclude all such unnatural influences. In fact, our family has never kept a dog or a cat even, because they might disturb the ecology."

"The vegetation changed a great deal in the first year. Part of this 590 acres had been under cultivation for corn and other crops. A different type of natural vegetation appeared and has been changing ever since so that now those old corn fields have grown up into a forest with trees 40 feet high."

Interviewers for the project have tried to obtain insights into more recent years, including the student protest and counter-culture of the 1960s and early ’70s. Some illuminating stories emerge. One is that of Ambrose Saricks, professor of history and former vice chancellor.

"Tom Rehorn [g’72; local activist and former director of the Methodist Wesley Foundation] came forward with the thought that to prevent a strike, which some were threatening, there should be a big meeting in the Ecu-
menical Christian Ministries center. We agreed that the Chancellor [Laurence Chalmers] and Bill Balfour, who was then in student affairs, and I was chairman of the Senate Executive Committee would sit down and meet with the students....The result of that kind of tense meeting...was that the spokesman for the students agreed that we should...take my suggestion and appoint a joint student-faculty committee and spend the summer going over the whole Senate Code and maybe redoing it...."

Russell L. Wiley, the band director who originated the Midwestem Music Camps for high-school students, told of the impact of protest days on the camp:

"The camp took a beating that one summer [of 1970]... For a thing like this to happen...two students to get killed and the Union to get burned...it certainly frightened a lot of people. But people settled down and, in another year, things were back to normal."

Many retirees we interviewed earned distinction as teachers. One of them is Clark Bricker, professor of chemistry, who received the HOPE award four times.

"After all, the students were my customers. I don't think I got these awards for being soft. Because I have had many students tell me that General Chemistry was the hardest course they ever took. Just recently, I had an occasion to be at a wedding where the groom had been in my course some 15 or 18 years ago and he said, I failed your course, but it was a good course."

"I don't think you get recognition by being easy. You gain recognition by letting everyone know that high standards are expected but being fair and tolerant in dealing with students."

Bricker's and other KU voices echo throughout the oral histories assembled by the retirees' club. In future articles I'll share more about eras, departments and individual memories of the University.

Kansas Alumni Magazine
Jayhawk Generations

When they saw the Kansas Alumni advertisement requesting information about sons and daughters entering KU as second-, third- and fourth-generation Jayhawks, Jeff, c'69, d'71, and Sandy Hesser Dolezal, n'68, g'75, eagerly sketched a four-tier KU family tree with their daughter Megan at the top. "Sandy and I have waited about 20 years for this opportunity to have our daughter in Kansas Alumni," Jeff wrote.

Megan is among nine featured freshmen whose great-grandparents walked the Hill. Eighteen freshmen are third-generation Jayhawks, and 47 are second-generation Jayhawks, for a total of 74 students in this year's edition.

Some families have left indelible imprints. Catherine Collinson's great-grandfather was Oscar S. Stauffer, '12, founder of Stauffer Communications Inc. for whom the School of Journalism's Stauffer-Flint Hall is named. Tucker Harrington's parents endowed a Williams Educational Fund scholarship in honor of his grandfather, Richard L. Harrington, b'32.

Many students join brothers and sisters on campus. Marnie Dodson provides a special Jayhawk welcome for her brother Dave: She performs as Baby Jay. Bryce Southern, a fourth-generation Jayhawk, carries on family tradition by playing golf for KU; his dad played in the 1960s.

Many of the students bring awards and scholarships. They will pursue diverse fields and spread to all corners of the United States and the world when they graduate.

Kansas Alumni hopes to receive news about their Jayhawk descendants in 20 years or more.

Fourth-generation

MOLLY BUKATY participated in American Field Service at Arkansas City High School, where she was a member of the Fellowship of Christian Athletes. Students Against Drunk Driving, student council and drama club. A recipient of the Presidential Academic Fitness Award, she was a delegate to Girls State and has received numerous regional awards for public speaking and journalism, which she plans to pursue at KU. Her parents are Steve Bukaty, I'75, of Kansas City, Kan., and F. Regina Pringle Smith, d'73, of Arkansas City. Her grandparents are James, c'47, I'50, and Mary Asher Pringle, c'47, of Arkansas City. Her great-grandparents are James, I'20, and Minnie Mayer Pringle, '77, and Clinton Asher, c'21.

Catherine Collinson will study business at KU in preparation for a career in marketing. She participated in the spirit, Spanish, philosophy and drama clubs at Pittsburg High School and was a

the South Texas College of Law. He lives in Houston.

Charles Kopke, b. received the Addison B. Scoville Award last summer from the American Diabetes Association (ADA). He's former senior vice president of Commerce Bank in Kansas City and a national director of ADA.

1948

Virnelle Jones Fletcher, d. and her husband, James, 79, continue to live in Overland Park after retiring last spring. Virnelle was a counselor at Shawnee Mission West High School, and James taught at Highlans Elementary School in Mission.

Jean Irwin Johnson recently received a distinguished researcher award from the Oncology Nursing Society. She's associate director of nursing oncology at the University of Rochester (N.Y.) Cancer Center.

Earl O'Connor, b. I'50, is a senior U.S. District Court chief judge. He lives in Lenexa.

1949

Charles Davidson, c. retired earlier this year as director of oil and gas conservation for the Oklahoma Corporation Commission. He lives in Oklahoma City.

Jordan Haines, c. f'57, a director of Fourth Financial Corp. and KN Energy Inc., recently was elected an outside director of the Coleman Co. He lives in Wichita.

Herman "Joe" Hale, c. is chairman and chief executive officer of ADM Milling in Leawood. He and Joyce Vanier Hale, assoc., live in Overland Park.

Charles, d. and Shirley Sloan Kassinger, f. play in the six-piece Charlie Kassinger Dance Band in Mesa, Ariz.

Daniel Merriam, c. g'53, PhD'56, recently received the William Smith Medal from the Geological Society of London. He's a geologist at KU's Kansas Geological Survey in Lawrence.

William Nelligan, j. has moved from Damascus, Md., to Kansas City, where he's vice president of professional education and scientific communications at Marion Merrell Dow.

John Stauffer Sr., j. recently was elected chairman of the board of Stauffer Communications, where he also serves as president and chief executive officer. He lives in Topeka.

Anna Prettyman White, c. retired last spring from Western Farm Bureau Insurance in Denver.

1950

Hugh Gillin, c. has retired from movie and television acting. He lives in San Diego and operates several oil leases in Eastern Kansas.

Bob Timmons, d. g. coaches the girls' volleyball team at Baldwin High School. Bob, former KU men's track and field and cross-country coach, continues to live in Lawrence.

1951

James Bennett, c. studies in Austin, Texas, to become a licensed professional counselor and chemical dependency counselor.

Paul Coker Jr., f. a cartoonist for Mad magazine and Hallmark Cards, taught cartooning to children last summer at the Lawrence Arts Center.

Alita York Cooper, c. g'72, received the Wallace Galluzzi Volunteer Award from United Way of Douglas County for her work with the county Child Development Association. Alita lives in Lawrence, where she's associate director of KU's Edna A. Hill Child Development Center.

Jack Dalton, c. g'51, is a lawyer in Dodge City and chairs the Kansas Supreme Court Nominating Commission.

Logan Holye, c. m'55, serves as president of the American Urological Association. He lives in Annapolis, Md.

Sam Jones, c. lives in Belleville, Ill., where he recently completed his first novel, Mini Mum's Boarding House.

1952

Sarah Vancil Brunk, f. a retired reading teacher, recently received a Citation of Merit from McPherson College's alumni association. She and her husband, Homer, live in McPherson.

Marilyn Ward Chittenden received a patent last year on a line of garments called "Vestpurr of Scottsdale." She and her husband, Bruce, live in Scottsdale, Ariz.
James Glass, c, is a controller for Essilor of America. He and his wife, Bertha, live in Chihuahua, Mexico.

Marie Bevan Kiersch, d, works as a career counselor for Career Development in San Luis Obispo, Calif., where she and her husband, Theodore, make their home.

Harry Levinson, PhD, recently received an award from the American Psychological Association for his discovery and development of information in applied psychology. He lives in Cambridge, Mass., and is a clinical professor emeritus of psychology at Harvard Medical School and chairman of the Levinson Institute.

Wilbur "Pete" Peterson, g, and his wife, Mary, continue to live in Belle Plaine, where Pete recently retired as superintendent of USD 357.

Ivan Pfauser, e, retired earlier this year as a principal civil engineer with Phillips Petroleum. He and his wife, Viola, live in Caney.

1953

Constance Achterberg, i, practices law in Salina and serves on the Kansas Supreme Court Nominating Commission.

Justo Bravo, PhD, and his wife, Aurora, celebrated their 50th anniversary last spring. They live in Rio Rancho, N.M. Justo is a professor emeritus of chemistry at West Chester (Pa.) University.

Knox Jones Jr., g, PhD'62, is a Horn professor of biological sciences and museum science at Texas Tech University in Lubbock. He recently received honorary membership in the American Society of Mammalogists.

Robert Stewart, j, serves as executive counselor for Dan Pinger Public Relations in Cincinnati.

Max Thompson, j, d'57, g'62, retired last summer after 36 years of teaching high school. He continues to live in Davenport, Iowa.

1954

Future generations

If you know an upcoming freshman who will be a second-, third-, fourth- or fifth-generation Jayhawk, plan to send us information about the student for upcoming editions of Jayhawk Generations. We do not have a system for tracking freshmen whose parents and grandparents attended the University, so we can include only those names provided by readers. Look for advertisements about next fall’s feature in spring issues of Kansas Alumni. We look forward to hearing from you.

Gary M. Patterson, f'71, 43. July 5 in Chicago, where he was an art director for Nobart Inc. He is survived by his mother, Pauline; two brothers, Richard, c'75; and Donald, d'77; and five stepisters.

Dennis R. Schmidt, d'72, 40. May 13 of cancer in Wichita, where he was a salesmen for Varsity Sports. Surviving are his wife, Kyle, a son; a daughter, her parents; two brothers, one of whom is Dick, 71; and his grandmother.

Stanley E. Wilson, f'74, 39. May 15 in Chicago, where he owned and published Second City Scout, a high school basketball recruiting service for area schools. Surviving are his father, Max, 83; and his mother, Maxine; a sister; and two brothers, one of whom is Terrance, d'77.

1980s

W. Russell Brooks, b'86, 60, April 28 in Lawrence, where he had been principal at Indus/Kaw Valley Elementary schools until retiring in 1990. Survivors include his wife, Patricia; a daughter; two sons, one of whom is Mark, 87; his mother; a sister; and two brothers, one of whom is Roland, c'50, m'53.

Jarl J. Smith, c'87, c'90, 28. June 19 of injuries suffered in an automobile accident. He lived in Lawrence and was a computer analyst and programmer for Kansas City, Kan., Community College. Surviving are his parents, Jimmy and Joelle Smith, and his grandparents.

The UNIVERSITY COMMUNITY

Ernest Griswold, c'27, PhD'34. May 6 in Lawrence, where he was a retired professor of chemistry. A memorial has been established with the KU Endowment Association. He is survived by his wife, Marvel Legg Griswold, 31; three daughters, Mary Griswold McMechan, d'58, Virginia Griswold Fearing, d'64, and Catherine Griswold Person, 69; three sons, Norman, c'57, William, d'67, and Stephen, c'73, m'76; 11 grandchildren; and seven great-grandchildren.

Charles A. Leone, 73. May 1 in Fayetteville, where he was retired vice president of the University of Arkansas. He had been an assistant professor of zoology at KU from 1949 to 1968. Among survivors are his wife, Madelyn; two sons, one of whom is Timothy, 69; a daughter, Patricia Leone Moore, d'69; two brothers; and seven grandchildren.

Gilbert Ulmer, g'33, PhD'39, 88. April 10 in Lenexa. He was a retired professor of mathematics and education and had been associate dean and acting dean of the College of Liberal Arts and Sciences. He is survived by his wife, Jean Pruitt Ulmer, b'37; five daughters, Susan Ulmer Snyder, c'64; Nancy Ulmer Spencer, c'67; Becky Ulmer Pinzott, d'69, Janet Ulmer Koertig, c'71; and Judith Ulmer Leon, c'73; a son, John, c'72; and nine grandchildren.

KANSAS ALUMNI MAGAZINE
Business

Tim Shaftel, associate professor of accounting, has been named the first Jordan L. Haines professor of business. As the Haines professor, Shaftel will oversee the introductory accounting course. He will begin his duties Dec. 1, after he returns from a semester at Japan’s Kanagawa University.

Shaftel’s research crosses disciplines, including accounting, finance, economics, marketing and information systems. KU accounting students recently selected him as the 1992 Outstanding Accounting Educator.

The Haines professorship was established by a Campaign Kansas gift from Nancy, assoc., and Philip Anschutz, b’61, of Denver. The Anschutz family has made many significant contributions to the University, including a $6.5 million endowment for library acquisitions.

Haines, b’49, f’57, is immediate past chairman of the Fourth Financial Corp. in Wichita, the largest bank holding company in Kansas. He has a long history of service to KU, including the national chairmanship of Campaign Kansas.

Bubb, b’28, established the awards in 1970. Bubb, who died in 1989, was chairman of the Topeka-based Capitol Federal Savings and Loan Association. He served on the Kansas Board of Regents, was a member of the business school’s advisory board and was active in the Alumni and Endowment associations.

Joy now has won the award four times. He joined the faculty in 1969 and specializes in finance. Koch came to KU in 1988; his interests include international finance, investments and financial markets and institutions.

Engineering

Wind tunnels, which engineers use to test experimental aircraft, sometimes yield distorted results that can blow a project. But C. Edward Lan, professor of aerospace engineering, has developed a computer program that increases reliability by factoring in tunnel effects on air flow.

Lan began his research after scientists at the National Aeronautics and Space Administration complained that their wind tunnel results didn’t correspond to tests in other tunnels or to actual flight test data. Wind tunnel testing is critical in aircraft design because corrections are cheaper to make before a full-scale model is constructed.

Lan in September traveled to Beijing to present his findings to the International Council of the Aeronautical Sciences. He now seeks funding to extend his research to high-speed aircraft.

Lan says a NASA researcher told him he was the only person in the country doing this kind of corrective research.

FINE ARTS

A $165,000 grant from the Andrew W. Mellon Foundation will fund development of the Spencer Museum of Art’s educational programs. The Spencer is one of 10 museums nationally to receive the three-year grants. The money will support research, interdisciplinary activities and special exhibitions.

A portion of the grant will fund a new program, “The University in the Art Museum,” which will train faculty members to incorporate museum collections into their courses. Marilyn Stokstad, University distinguished professor of art history, will develop the program, which KU eventually will share with other colleges and universities.

The grant also will fund summer fellowships and two Mellon internships for graduate students.

Swarthout Recital Hall will be the site for the American round of the first International Harpsichord Competition Nov. 17-21. The top three finishers will win cash prizes and compete in the international finals April 18-26, 1993, in Warsaw, Poland. Michael Bauer, assistant professor of organ and choral music, will direct the competition.

JOURNALISM

Magazines have been piling up in the school since 1977, when the Magazine Publishers of America named KU its official repository for unusual and first editions. Tucked into filing cabinets behind the Reading Room reference desk are 3,152 magazines, among them a Feb. 21, 1925, first issue of The New Yorker; a Nov. 9, 1967, first edition of Rolling Stone; an 1865 Harper’s; Time’s 1922 prospectus; and dummy issues of Life and Look magazines.

Carol Holstead, assistant professor since August 1990, this summer used her new faculty grant to set up a database that organizes the collection by editor, publisher, art director, subject and issue date. When she completes the catalog—she hopes by next summer—a researcher will be able to analyze magazines launched the same year or study works by one art director or editor. "Such meaningful, comparative studies are now virtually impossible," she says, "or at least extremely daunting."

Much of the MPA collection was
YESTERDAY'S NEWS: Holsteed has set up a database so researchers can access
the 3,922 rare and first editions in the journalism school's MPA collection.

Donated by John Suhler, '69, former
president of CBS publications, who in
1977 established the Lester Suhler Mem-
orial Fund to honor his father, Lester
Suhler, '30, former circulation-promotion
director at Look. For many years Pro-
Fessor Emeritus Lee Young maintained and
built the collection.

Garland Thompson, columnist and
editorial writer for the Baltimore Sun,
has left the newsroom for the classroom
as this year's Freedom Forum profes-
sional in residence. Thompson is the 18th
journalist at KU on a stipend from the
Freedom Forum, established in 1935 as
the Gannett Foundation, Arlington, Va.
A journalism and law graduate of
Temple University, Philadelphia, Thomp-
son from 1975 to 1984 worked as a
reporter, editorial writer and copy editor
at the Philadelphia Inquirer. He worked
one year as executive editor of the
Philadelphia Tribune, the nation's oldest
black news weekly. He redesigned the
Tribune before moving to the Baltimore
Sun staff in 1985. At KU he will teach
reporting, editing and a graduate course
in editorial writing.

LIBERAL ARTS
AND SCIENCES

Dennis Karpowitz, associate professor
and associate chairman of psychology,
on June 1 became interim chairman of
computer science. He replaces William
Bulgren, who resigned April 2.
Two outside consultants had advised
that Bulgren leave KU because of person-
al conflicts with Zamir Bavel, professor
of computer science, who they also said
should leave. Both men remain on the
college of arts. The consultants
had suggested that if conflicts
continued, the
department

JOHN S. KELLY, c'49, professor emeritus of law, received the school's
distinguished alumni award during the Kansas Bar Association meeting June 11.
Kelly practiced law in Kansas City for
seven years before returning to Green
Hall to teach. He taught courses in 15
areas of law before his 1984 retirement.
He is president of the KU Retirees' Club.

For the second year in a row, Regi-
nauld Robinson, c'80, l'87, associate pro-
sessor of law, in June received the
Frederick J. Moreau Award from the Stud-
ent Bar Association. The award, begun
by Jeanne Moreau in honor of her late
husband, law dean from 1937 to 1957, rec-
ognizes a faculty member who excels as
a student adviser.
Robinson, who joined the faculty in
1988, teaches constitutional and race-
discrimination law.

SOCIAL WELFARE

Brenda Crawley, associate professor of social welfare, is using a Fulbright
award this fall to teach at the National
University of Lesotho in Roma. Lesotho
(pronounced Lay-SUE-to) is an independ-
ent country surrounded by South Africa.
A faculty member since 1984, Crawley
is helping to create a graduate program
there. To prepare for her assignment,
she in July left for Africa to attend the
International African Women's Confer-
ence in Enugu, Nigeria, to present a
paper on 21st century policy issues for
older African-American women. She
then visited East African universities
to study social services. Before leaving,
she said she expected to find that African
social services focus more on the entire
family than on the individual, as in the
United States.
"I do not want to export American or
Western notions of a social-services sys-
tem," she said. "I want to be culturally
specific."
Achilles Discovered with the Daughters of Lycomedes had been under wraps for 15 years when Forrest Bailey finally got a look at it in 1990.

The Spencer Museum of Art had kept the 18th-century Italian oil painting from public view because, as Bailey bluntly puts it, "it was a wreck."

Syrupy lacquer, chipped paint and an ugly dent had nearly ruined the canvas. But beneath the mess, Bailey knew, the bravura strokes of a master, Giovanni Antonio Pellegrini, awaited rediscovery.

So Bailey, an adjunct professor of art history at KU during 1991-92, studied Pellegrini before he began the painstaking rescue. He applied moisture, heat and pressure to pop out the dent; stripped away varnish and overpaint; removed crude additions to the picture edges; restretched the canvas; and filled and "inpainted" missing sections.

Inpainting consumed many of the 175 hours Bailey spent over 18 months. He likens the process to constructing an intricate jigsaw puzzle. "You have to envision where a missing stroke begins and ends," he explains. "You line it up with an area maybe two or three inches away and study it until the form is revealed."

Color presented another riddle. Pellegrini, Bailey says, liked to push the palate. "He was inventive. He would take an earth color and make it look like a bright red."

To inpaint, Bailey wears surgeon's glasses that magnify an image 2 1/2 times. He uses "spotter," sable-bristled brushes a scant 1/8-inch in diameter. For "paint" he grinds color into polyvinyl acetate, a non-yellowing adhesive that can be removed. "You never permanently alter a painting," he stresses.

The $10,500 restoration was the first to tap the Samuel H. Kress Foundation's $150,000 endowment, which the Spencer used to match a National Endowment for the Arts grant. Now Pellegrini's reclaimed painting hangs in the Spencer's 17th- and 18th-century gallery.

"When I finished, I felt uplifted and enlightened," Bailey says. "With a good painter, restoration is a revelation. It's like getting a lesson from a master."

—Bill Woodard
Curl Up in the Arms of An Old Friend

The Best Seat in the House
• Upholstered in custom-woven University of Kansas tapestry fabric
• Crafted from selected maple hardwoods and finished in cherry
• Constructed with hand-tied coil springs for years of wear
• Treated with Scotchgard® Fabric Protector to resist spills and stains

Special Prices for Association Members
• Chippendale Wing Chair
  Members $605
  Non-members $765
• Ottoman
  Members $255
  Non-members $295
• 20" x 20" Pillow
  Members $44
  Non-members $49
• Upholstery, 54" wide (per yard)
  Members $44
  Non-members $49
  (Shipping and handling charges will be added according to weight of items.)

And when you're on the go, take along
• The KU Director's Chair
  • Sturdy frame is constructed from select North American hardwood, with heavy-duty, corrosion-resistant steel braces and hinges.
  • KU tapestry seat and back slip conveniently on frame—no tools needed.
  • Folds compactly for complete portability.
  • Plastic self-leveling glides assure even seating and prevent marring of floors.
  Members $69
  Non-members $79
  (Plus shipping and handling charges)

To order, use the attached postcard—or call the KU Alumni Association at 913/864-4700.

Your KU chair will comfort you—no matter how rough your day has been.
PUT A HAWK IN YOUR POCKET

The Jayhawk bank card helps you help your alma mater—painlessly.

If you’re a would-be KU benefactor but lack the extra loot, the Jayhawk VISA or MasterCard offers the perfect solution. Just charge your purchases to the card, and First Bank Card Center in Wichita will contribute to the KU Alumni Association.

You’ll help the Alumni Association serve its members and the University. And you’ll also save—because Alumni Association members receive a lower interest rate and annual fee on this very competitive card.

For full details, call the First Bank Card Center in Wichita at 1-800-222-7458. Or call the Alumni Association at 913-864-4760, and we’ll send you an application.
