WE'LL PACK THE PICNIC. YOU PACK THE STADIUM.
Homecoming 1995 / October 13-14

HOLLYWOOD ON THE HILL
Commemorating 100 years of American film

Join the Alumni Association for lunch at the 11th annual Picnic-Under-the-Tent Saturday before the 1 p.m. kickoff against Iowa State.

The Alumni Association will serve bratwurst and fixings at the big tent south of the stadium from 11 a.m. to kickoff. For tickets, complete the form below or call 913-864-4760 (Have credit card number ready). For game tickets, call 864-3141 or 1-800-34-HAWKS.

Other Highlights:
• Homecoming Parade down Jayhawk Boulevard, 2:20 p.m. Friday
• KU Volunteer Day for Kansas Honors Program and alumni chapter leaders, Friday and Saturday
• "Five Guys Named Moe," 8 p.m. Saturday, Lied Center. Call 864-2787 for tickets
• Late Night with Roy Williams. Doors to Allen Field House open at 10:30 p.m. Saturday
• SUA Feature Films, Friday and Saturday nights. Call 864-3477 for details.
• Open Houses. Call your school or living group for details.

PICNIC TICKETS ★ $8 per adult $3 per child, 10 and under

Out near Garden City in southwestern Kansas, where the rain gauges drink only 15 inches in a normal year, water is worth fighting for.

Since 1985 Kansas has argued with Colorado over the Arkansas River—or lack thereof—in western Kansas. By the time the Ar-KANSAS reaches Garden City, it is a puny puddle in a parched streambed. Kansas blamed the dwindling water in part on 1,500 irrigation wells that Colorado farmers have drilled since the states signed a water agreement in 1949. Colorado pointed its finger at irrigation supplied by the University.

In May the U.S. Supreme Court ruled that Colorado owes Kansas compensation for water drained by those 1,500 wells. The Court also denied Colorado’s claim that Kansas irrigation had drained the river. To poke holes in Colorado’s case, Kansas attorneys relied on evidence supplied by the University.

In our cover story, Rex Buchanan explains how satellite images analyzed by researchers at KU’s Applied Remote Sensing program disproved Colorado’s irrigation argument.

Although the Court still must decide how much our western neighbors owe, the legal victory demonstrates the power of researchers. Those who look for tangible proof of scholars’ impact on the state can measure the gallons and dollars that Colorado eventually will repay. Considering that those 1,500 wells drained an estimated 48 billion gallons a year, those dollars don’t go as far as they used to.

Several paragraphs follow regarding the importance of water rights and the legal battle between Kansas and Colorado over the Arkansas River. The text continues to discuss the significance of the Supreme Court’s decision and the implications for both states.

Boys, in the former Soviet republic of Kyrgyzstan. During seminars in the capital of Bishkek, faculty members explained the foundations of a free press and modern marketing to Kyrgyz journalists. On weekend tours, they listened as the Kyrgyz explained the majesty of the scenery and the economic struggles of their young nation. Chuck captures the humor and poignancy of this unusual field trip.

The novelty of free press and capitalism in Kyrgyzstan unsettles Americans, for whom such ideas are second nature. For 50 years at KU, the origins of Western thought have been required reading for undergraduates in the Western Civilization program. Among academic rituals Western Civ is perhaps the most fearsome.

Assistant editors Bill Woodard and Jerri Niebaum Clark celebrate the anniversary of a down-to-earth tale of the program’s methods, student short-cuts, and varied readings. Once a bastion of traditional Western ideals, the program now is more worldly. Read on and take heart. There’s no comprehensive exam.

The story also marks a sad milestone for Kansas Alumni. It is Jerri’s last as a staff member. In July she and her husband, Matt, g’93, moved to Vancouver, Wash., where they will begin new careers, he with Hewlett Packard and she in motherhood and free-lance writing.

Jerri joined the staff in 1988 and hung her new KU journalism diploma on the wall, along with a postcard from a 5-foot-old, red-haired ballerina toting in a plié. In her seven years here, Jerri’s pliés and prose rarely wobbled. She could report gracefully and precisely on rural medicine, then sashay into a silly parody of Dr. Seuss.

Oh, the places she’ll go.

—Jennifer Jackson Sanner—
Who's in charge?

What cave have researchers Aletha Huston and John Wright [June/July] been living in for the last 40 years?

To make a statement about kids watching TV like "so we (parents) must assume responsibility for the (children's) TV diet" is pure heresy in this liberal land where everybody has "rights" with no personal responsibilities and the government (read taxpayers) has all responsibility.

Now the new leadership in Congress is trying to change that paradigm and the liberals call them "mean spirited" and wanting to hurt children. What the new leadership in Congress is trying to do is exactly what researchers Huston and Wright are suggesting: people must start taking personal responsibility for themselves and their children and get government out of the way.

Write or call your Congressional representative and demand that personal responsibility be stressed and written into law if necessary.

Larry Miller, e'62, g'64
Poughkeepsie, N.Y.

Skeptical of success

I was surprised at the seemingly overboard promotion of a part of the curriculum labeled KULAC [April/May]. While I appreciate the good intent of the promoters, I will have to predict its eventual falling flat on its face.

In my earlier years I studied Latin along with other subjects. At KU I took at least two courses in German. Many years later I lived in Indonesia for two years and there studied the Bahasa Indonesia language. Still later I studied Swedish in a night course. When I knew I would be in Europe after I retired I began studying German again.

I have spent about four years of my life outside the United States. I have tried to learn the language of each country I visited. Yet I have only a passing knowledge of a number of phrases in each of the languages. Why? Because as soon as I left that country I no longer could recall the language.

How is KULAC going to impress upon its students the language of the country that is being studied in such a way as to have an enduring understanding of the language? Will Kansas University set up branches in various foreign countries so that students can hear the language of their interest all the time? Only a few in this world are so gifted at multi-linguacity that they can speak different languages interchangeably. We can't afford to tailor KULAC classes for this few.

While I wish Mr. Weidner good luck I do not hold much confidence in good results. There are better ways to teach foreign commercial customs.

Reverence for reference

It is too bad that the current Jayhawker carries so few senior portraits and isn't purchased by all the students [June/July]. I was shocked when I learned recently that neither of my sisters had bothered to buy Jayhawkers for the years they were in school. It is their loss. I would be writing a much different account of the war years [in a book about growing up in Lawrence] if I didn't have the material from the Jayhawkers to tell me what really happened. I have found them far more interesting 50 years later than I did at the time.

Family war lore

When I read the article, "War of a Lifetime" [April/May] it seemed important for me to get other facts in writing as well, especially as we celebrate the 50th anniversary of V-J Day this Aug. 15. "Dad ended World War II" was the message relayed to me shortly after I married into the Jarvis family. You see, the man who received the cease fire command Aug. 14, 1945, from President Truman was my father-in-law, John Jarvis, c'31.

A Navy lieutenant, John had trained as a communications specialist at Harvard. He was a member of Admiral Chester W. Nimitz's staff stationed in Guam during the war and received numerous dispatches under his voice call of "Orangejuice." One somber message received marked the death of Franklin D. Roosevelt April 12, 1945.

Four months later John Jarvis was on duty when the message from President Truman came across the teletype: "Cease fire, but stay diligent. Keep alert for any subversive behavior." Having delivered the message to Admiral Nimitz, he was advised to relay the cease fire to the entire Pacific fleet.

John, who lives in Winfield, fondly recalls his days on the KU campus. His husband and I do too; in fact, one highlight for me was taking Carillon lessons in the WWII Memorial Campanile. In the spring of 1975 I performed my senior carillon recital 30 years after the end of WWII and also coinciding with the cease fire in Vietnam. At the base of the carillon were my parents, Pat Harris Chaney, c'49, and William R. Chaney, c'49; my husband, Paul, c'75, his mother, Shirley, and John Jarvis.

John recently spoke of a KU football game, and we asked if KU had won. "Yes, we certainly did!" was the reply. The 86-year-old man who ended WWII still had victory on his mind.

Buffalo, Wyo.

Jayhawks down under

I know KU is good at marketing itself, but... during the past summer one of the national petroleum companies had a banner marketing promotion: Buy $10 worth of petrol and buy a "genuine American college cap" for just $7.95. Not so unusual, you say, but this was in Melbourne, Australia.

My husband, Greg (an adopted Jayhawk), was so delighted that he bought one for each of us. My son, Ted, proudly wears his cap to school and I've noticed several other children wearing them, too. It is truly a wondrous sight to see Jayhawks wander past in suburban Melbourne!

This marks the inaugural season of women's soccer as an athletics department-sponsored sport. Home matches are played on Fridays and Sundays at the new KU Soccer Field, just south of Jayhawk Field and Allen Field House. Admission is free.

---

The gargoyles perched on Dyche Museum of Natural History command a spectacular view of Jayhawk Boulevard and the Kaw Valley.
We can rebuild him. We have the technology.

The Jayhawker mascot is already spoken for

A few folks thought naming Lawrence’s upcoming second high school “Free State High” would be tasteless because the phrase already adorned a popular local microbrewery. (Never mind that “Free State” is used by other businesses, including a glassblowing operation, a credit union, a mental health service and a housepainting company.)

Blessedly, such concerns didn’t stop the school board from honoring Lawrence’s Civil War heritage. The name “Free State” traces to the mid-1860s, when abolitionists from the Massachusetts Emigrant Aid Co. founded Lawrence. As a cradle of the anti-slavery movement, the town became a target for pro-slavery raiders.

History in mind, the board selected “Lawrence Free State High School” after considering more than 70 nominations. Some suggestions were quickly eliminated, including Quantrill (after murderous pro-slavery marauder William Quantrill), Oz (no explanation necessary) and New Millennium (sounds like a “Star Trek” spinoff). Among the 15 finalists were Oregon Trail (the runner-up), Mount Oread, Langston Hughes, Naismith and Kaw Valley.

“As we enter the next century, my concern is we’re going to forget what happened in the 1860s,” says board president Jerry Hannah, Ph.D. ’80. “I’m very proud of what the state did when it had to make some tough decisions.”

Remembering that heritage may be easier come fall 1997, when Lawrence Free State High School opens.

Did you ever wish to switch campus sidewalks for sand, walnuts for palms, squirrels for squirrel monkeys? For a dozen students the fantasy comes true next fall, when they head to class in Golfito, Costa Rica.

KU's new tropical studies program in southwestern Costa Rica offers courses in natural history, marine biology, rural development, applied cultural anthropology, ecology and Latin American culture and art—all taught in Spanish. With nearby beaches, rural villages and virgin forests, Golfito classes will be outdoors three days out of five, says Mary Elizabeth Debicki, director of study abroad.

"Students will do on-site interviews, excavations, specimen collections," she says. "They'll be applying the skills they learn in class to become first-rate scientists."

KU's outpost on a University of Costa Rica branch campus is equipped with a small library and Internet access. Kansas and Costa Rica at San José have exchanged students and research for four decades. Tropical studies is the first attempt at a permanent Golfito program, Debicki says, although KU researchers have based projects there and a class of student archaeologists spent a semester there in 1992. The cost to students is $4,400, and 24 positions are available—12 had been filled by mid-June.

Debicki cautions that Golfito isn't Palm Springs. "This is for students who have a sense of adventure," she says, "It's really getting back to nature—not sanitized nature."

After all, it's a jungle out there.

The Boresow Brood makes the Brady Bunch look downright dinky. Donald and Harriet Boresow, of Prairie Village, have reared 14 children—all of them Jayhawks. In fact, for nearly 20 years the couple have had at least one child continuously enrolled at KU. The youngest, Danny, at pretime was planning to attend KU this fall. "The kids have all gotten scholarships and loans," Mom assures. "The older ones are making payments now."

Now aged 37 (Mike, d'81) to 18 (Danny), the Boresows lived all together in their eight-bedroom Prairie Village home in 1977—the year Danny was born and Mike started college. Dad Don, an ex-Marine corporal and retired mail carrier, and Mom Harriet, a master at multi-tasking, are wistful as they watch their final hatchling fly. "I'd like to turn the clock back and have them all home in diapers with bottles and playpens," Harriet admits. "It was fun."

The brood so far has expanded by eight grandchildren, although families of five are the biggest. Grandpa Don has promised $14,000 to a new gang of 14. He expects to keep his cash.

The last time Don and Harriet Boresow and their 14 children posed for a family portrait was in 1989 for youngest son Danny's bar mitzvah. This fall Danny is the last to enter KU. His siblings are, from left: Rebecca, j'94, Larry, b'90; Sarah, c'95; Bobby, b'93; Mike, d'81; Steve, e'84; Mark, '88; Jerry, '93; Amy, KU sophomore; Jennifer, d'93, a KU graduate student; Lori Boresow Glaser, j'89; Susan, j'82; and Danny, '86.
Hemenway spreads word that KU serves Kansans

In his first few weeks on the Hill, Chancellor Robert E. Hemenway proved that the University’s top job doesn’t stop at Strong Hall. With a goal of visiting all 105 Kansas counties early in his tenure, Hemenway in June toured the state’s western corridor to chat with folks from Dodge City, Garden City, Liberal, Larned, Hays and other towns in 11 counties.

tell him hello. She wouldn’t have had any idea who he was if he hadn’t been out here.”

Hemenway’s visits corresponded with KU Days, events sponsored by the Alumni Association with KU representatives from the offices of admissions and governmental affairs, the athletics department and the Endowment Association. Fred B. Williams, Alumni Association president, says alumni and non-alumni were grateful for a chance to question the new chancellor. “All citizens of Kansas have a stake in KU’s programs,” he says, “and the chancel-

WESTWARD BOUND: Chancellor Hemenway made Garden City a stop on his June tour of western Kansas towns.

Bette Jo Jones Roberts, c’50, a longtime alumni volunteer from Garden City, says Hemenway’s visit gave a face to a place that’s hard to personalize long-distance. “The alumni out here keep trying to sell the University,” she says, “but we have a hard time getting that across. When someone like the chancellor comes out and people can see that he’s just a regular person they can visit with, it’s a huge help.”

Roberts says many of the 100 guests at Hemenway’s talk June 7 were parents of prospective students. One dad saw Roberts again a few weeks later. “He had taken his daughter to summer orientation and she’d seen the chancellor on campus,” Roberts says. “She felt great about being able to

lor illustrated the ways in which KU benefits the state through its academic programs as well as research and public service.”

Helping Kansans understand the role that the University plays in statewide activities was a key reason for the chancellor’s tour. “I think KU has a pretty good story to tell,” Hemenway says. “You can certainly point to a number of ways in which KU is significant to people throughout the state. But I’m not sure we’ve always been as effective as we might be in communicating that story.”

Three recent examples of direct KU service include the Medical Center’s $15 million grant to boost the number of primary-care doctors in Kansas (Kansas
Alumni, June/July), the remote-sensing research that helped the state win a multi-million-dollar water rights lawsuit against Colorado (see cover story) and a National Science Foundation grant won by KU computer experts to build KANREN, a statewide information superhighway (Kansas Alumni, October/November 1993).

"I have stressed that KU has a statewide responsibility for the health and well-being of Kansans," Hemenway says. "We are the only academic health center in the state. We are the vehicle by which primary-care will be delivered to rural communities in the state. If we don't do that I don't think it's going to get done."

The state also benefits when KU alumni go to work in Kansas towns. Hemenway notes that 60 percent of Kansas doctors attended KU, as did 90 percent of pharmacists and 60 percent of city managers.

Hemenway also talked about the importance of state support. "I'm very concerned about what seems to be an attitude in Kansas and the country that says, 'Let the student pay for it,' " he said in Garden City. "If we keep raising tuition a lot of people who want to go to college aren't going to be able to."

He encouraged alumni to be ambassadors for the University. "I would ask for your help in joining with KU and the Alumni Association and others who talk with legislators to encourage them to think about higher education as an investment in the future," he said, "not just an expense in the present."

Hemenway got personal with western Kansans by telling stories about his childhood in Hastings, Neb., and his Midwestern family. His father, he recounted, rode to high school by horse and entered college with $25. When Hemenway told the story to the Garden City crowd, he finished by adding, "Growing up in a place like Garden City I think you get a certain perspective on the world that serves you well."

And Kansans who also are Kansas graduates, he decided, have an extra special set of values. "There's a feeling about KU that you see at these events," he says, "that you don't see at other institutions."

Former Navy surgeon to lead Med Center

When Donald Hagen first landed in Vietnam during the war, he couldn't safely send the injured to hospital ships offshore. So when the gunfire started, the young doctor set up a clinic in his tent. He struggled all night to save one soldier's life. "I vowed then," he says, "that if I could make a difference I was going to do it."

Hagen devoted his career to improving military medical services, advancing to surgeon general of the Navy in 1991. His latest challenge was bringing the armed services into medicine's modern age by developing one of the largest managed-care programs.

Now Hagen, 57, will command KU's medical center as the new executive vice chancellor. He begins his post Sept. 1.

Chancellor Robert E. Hemenway, who announced the appointment June 6, commends Hagen for his commitment to patient care in today's turbulent medical climate. "Dr. Hagen brings experience that is critical as academic medical centers adjust to the growing managed health-care environment," Hemenway says.

A priority for Hagen is to build a network of faculty and staff who can work with the health-care conglomerates. If the Medical Center doesn't connect with the big carriers, he says, the number of patient referrals—particularly of difficult cases that provide teaching models—will decline.

Hagen sees academic centers as watchdogs for the evolving system. "We have to be careful in American medicine that we don't neglect research," he says. "Managed-care programs are being developed by business people whose bottom line is the dollar. There's no incentive for education and research. So it's imperative that someone be an advocate for the balance of clinical care, education and research."

A vice admiral, Hagen earned his medical degree from Northwestern University, Chicago, in 1963 and earned his Navy commission in 1964. After Vietnam he completed his residency in general surgery at the Naval Hospital, Portsmouth, Va., in 1973. He served as commander of the National Naval Medical Center in Bethesda, Md., and as commanding officer of the Naval Hospital at Camp Pendleton, Calif. His four-year presidential appointment as Navy surgeon general ended this summer.

Although he doesn't start work in Kansas City until September, Hagen through the summer received regular mail from acting executive vice chancellor A.L. Chapman and other administrators. For example, he has begun a file on the heart-transplant program, brought under scrutiny by a Kansas City Star article in May (Kansas Alumni, June/July). A committee is investigating allegations that the program turned down all donor hearts while admitting new patients needing transplants. "Our position is to wait until all of the details are brought to the office so you have credible material to review," Hagen says. "Then you take appropriate action."

Hagen also is prepared to hire a new nursing dean: Eleanor Sullivan resigned the post July 1 (Kansas Alumni, June/July). He'll seek a dean who, like Sullivan, is eager to promote the expanding role of nurses, he says.

Two days before his Navy retirement ceremony June 29, Hagen already was focusing westward. On his mind were the Medical Center's recent achievements in

KANSAS ALUMNI MAGAZINE 11
DISCOVERY

AIR SUPPLY

Civil engineer DENNIS LANE clears the air about what we breathe.

The offenders are so tiny that a million fit on a pinhead. They're molds, pollens and manmade pollutants and, to persons with allergies, they're suffocating—but stealthily. "It's not a green fog coming over the horizon so you can run," says Dennis Lane, N.T. Veatch distinguished professor of civil engineering.

So Lane has built a tool to detect the minuscule malefactors. His "particle sampler" measures air gunk 10 micrometers or smaller—the right size to sneak through the nose's filtering system and invade the lungs. Larger stuff lodges in the nose and we sneeze it out. The lungs can't sneeze so they constrict to keep culprits out, causing asthma or bronchitis in persons with allergies.

Lane is applying for a patent for his contraption, which is smaller than a four-cup coffee pot and made of Teflon-coated aluminum. The Environmental Protection Agency already is using a prototype to test toxins in California, New York, Texas, Germany, Yugoslavia and Sweden, says Lane, who has won more than $500,000 in grants from EPA, the National Science Foundation and the Midwest Research Institute.

Lane's device sniffs out problems that make other samplers only about 80 percent accurate. By accounting for changes in wind direction and wind speed, he has made his sampler 90 to 95 percent accurate.

teleconferencing, continuing education and residency programs statewide. "All of these build a network," he says, "with potential to solve a significant number of the problems in medicine today."

$3.5 million to benefit biomedical research, arts

The Lied Foundation of Las Vegas in July pledged $3.5 million to the University for biomedical research and performing arts.

The gift includes $1 million for a biomedical research endowment at the Medical Center and $1 million for performing arts programming at the Lied Center, which was funded primarily by a $10 million gift from the Lied Foundation in 1988. The foundation's latest gift also will contribute $100,000 annually for five years to the Lied performance fund.

"I am pleased that the Lied Foundation, through this endowment, is able to assure access to world-class performances—especially for audiences who might not otherwise have this opportunity," says Christina Hixson, trustee of the Lied Foundation.

About the gift for biomedical research, Hixson says, "It is our hope that the endowment...will contribute to the discovery and prevention of disease and will thereby help create a greater quality of life."

As part of the recent gift, the foundation has agreed to provide an additional $500,000 each to the Lied Center and to biomedical research if the University secures matching funds within five years for Lied programming and by Aug. 31, 1996, for the medical research fund.

Chancellor Robert Hemenway announced the gift July 7. "The gift continues the Lied Foundation's tradition of investing in projects that affect the well-being of humanity," he says.

Renowned botanists sinking roots at KU

For only the second time in University history, a member of the National Academy of Sciences is joining the faculty. Tom Taylor, formerly a paleobotanist at Ohio State University, begins work this fall as Roy A. Roberts distinguished professor of biology and a curator of the Natural History Museum. His wife, Edith Taylor, also a nationally renowned botanist and former Ohio State faculty member, also joins KU as a professor and museum curator.

The only other National Academy member to teach at KU was Charles Michener, professor emeritus of entomology.

The Taylors bring with them a collection of more than 250,000 fossilized plants that will make KU's paleobotanical collection second in the nation—after only the Smithsonian Institution, says Chris Hauffler, chairman of botany.

Hauffler is thrilled to face the imposing challenge of finding a home for the five truckloads of rock. "This is huge," he says. "The fact that KU was able to attract these people here says volumes about the quality of the kind of science that we do."

The couple will spend the fall establishing a research base in Haworth Hall, where their collection will be kept until funds are found to renovate a suitable home in the Museum of Natural History.

In November the Taylors will make their annual excursion to Antarctica, where, with ongoing grant support from the National Science Foundation, they have collected many of their prized specimens.
ROCK CHALK REVIEW
MILESTONES, MONEY AND OTHER MATTERS

● THE UNIVERSITY TIES WITH YALE UNIVERSITY for the most undergraduates who will study abroad next year with scholarships from the National Security Education Program. Eight KU students are among 300 nationally who will receive up to $8,000 a semester for studies worldwide. Funded through the Department of Defense, the program began last year for students who need international experience to compete in their chosen fields. KU recipients are: Jennifer Cavanaugh, Prairie Village, who will study Spanish literature in Costa Rica; Jeffrey Lonard, Topeka, who will study Ukrainian in Ukraine; Linda Ly, Wichita, who will study biology and Chinese in China; Nancy Rideout, Liberty, Mo., who will study Chinese in China; John Roberts, Lakin, who will study music in Poland; Jennifer Shevmake, Overland Park, who will study sustainable development in Bolivia; Jason Unrein, Hays, who will study business and Spanish in Costa Rica; and Angela Warren, Ottawa, who will study Russian in Russia.

● WORK IS UNDERWAY on a $4 million expansion of the Watkins Health Center. RMT Construction Company of Olathe broke ground July 5 on a four-phase renovation that will add 20,000 square feet to the existing 60,000 square feet. Planned for completion in fall 1997, the renovated structure will more than double the space for urgent care and will add 30 examination rooms. The pharmacy, gynecology, counseling and psychological services, physical therapy and reception areas also will be renovated. Funding is from a $15 per semester student fee. "We've had over 300 percent growth in 10 years," says James Strobl, health center director. "We've just run out of space."

● J. MICHAEL YOUNG DIED JUNE 17 after a two-year battle with brain cancer. Young, professor of philosophy, associate dean of liberal arts and sciences and director of the College Honors Program, was featured in the December/January issue of Kansas Alumni after he participated in clinical trials of a promising new therapy being tested by the KU Medical Center. Survivors include his wife, Carolyn; his three children, T. Jason, '89; C. Bryan, '95; and A. Michelle; his parents; and two grandchildren. A memorial service will be held at 3 p.m. Aug. 27 in Murphy Hall.

Edith Taylor currently investigates fossilized tree rings on the frozen continent, where forests grew 300 million years ago. "As we talk about changes in our climate," she contends, "the only way we can see what plants looked like when the climate was warmer is to go back in geologic time."

Tom Taylor currently studies fungi, which aid other plants by absorbing water and helping to anchor plant roots; scientists believe fungi may have enabled plants to move from homes in water to land during prehistory. Tom spent this summer in Germany working with a researcher who has collected a rare assortment of fossilized fungi. Based at Westfälische Wilhelms University in Münster, he received an Alexander von Humboldt fellowship from the German government for the work.

Both Taylors will teach in the spring, he in paleobotany and she in biologic diversity. They're excited about KU's commitment to using collections for research and teaching. "The University seems to really support the museum and wants to continue supporting it in the future," Edith says. "The other attraction was the strong program in systematic biology, for which KU is world renowned."

DISCOVERY
OUTER LIMITS

With EXPERIMENTS ABOARDS THE HUBBLE, two scientists follow leads to the stars.

Studying the universe from Earth is like seeing clouds from the bottom of a swimming pool, says Adrian Melott, professor of physics and astronomy. The Hubble space telescope, which orbits 360 miles above Earth, is providing a better vantage point for two KU projects, one by Melott and one by Keith Ashman, post-doctoral researcher.

Melott views light beams emitted by quasars, which mark the universe's outer edges. Between the quasars and Earth, the beams pass through light-absorbing clouds, Melott explains. By looking at what's missing from the light spectrum, the scientists hope to map the clouds. "We're trying to piece together a period I like to call the dark ages," he says, "when galaxies were just forming."

For 45 hours late this summer, Hubble lenses will point toward objects of interest to Melott and a dozen colleagues at other study sites.

For the second project, Ashman and worldwide collaborators are using a dozen Hubble hours to identify tightly packed star clusters called globular clusters. By spotting the youngest clusters, the scientists can study merging galaxies. Spiral galaxies such as the Milky Way, Ashman theorizes, can crash into one another and form larger, elliptical galaxies. "If we're right, and results so far suggest that we are," he says, "it means our own galaxy hasn't yet suffered a major collision."
IN HIS FINAL LAPS as a Jayhawk, senior Michael Cox became an All-American in outdoor track for the first time.

In early June at the NCAA Track and Field Championships in Knoxville, Tenn., the Hannibal, Mo., native charged to fourth in the 1,500-meter run. His 3:40.69 clocking was less than a second off his career-best 3:40.1 effort that won him the Big Eight title earlier in the season.

It was the fourth All-America honor overall for Cox; he had previously been cited in cross country and in indoor track.

HOOPS PROFESSOR
Roy Williams will test his eighth KU men’s basketball team early and often. The 1995-96 schedule still isn’t final, but already the slate is easily one of the nation’s most rigorous. In fact, it’s difficult to imagine another schedule being tougher—particularly in the first week of the season:

• The Jayhawks will open play Nov. 25 in the Black Coaches Association Classic, tentatively located in Kemper Arena. KU will play Memphis, and Utah will play Purdue.

• Then they play in the Great Eight tournament Nov. 29 in Auburn Hills, Mich. Pairings haven’t been announced for ESPN’s eight-team, four-game showcase, but it is known that Ole Stale, Michigan State, U Mass., Arkansas, Kentucky, Virginia, and Wake Forest will participate.

• Then they come home for a Dec. 2 tussle with defending national champion UCLA.

Other notable non-conference dates include a Dec. 16 battle with Indiana in Kemper, a Dec. 22 date with Temple at the Meadowlands in East Rutherford, N.J., and a Jan. 11 visit to Florida. As well, KU will most likely travel to Paris, France, for exhibitions Dec. 28-29 against European professional teams at the Buckler Challenge.

'Hawks aim for balanced offense, stingier defense

Last year Kansas’ football team see-sawed to 6-5 and spent the bowl season in Barcaloungers. Coach Glen Mason finds little consolation in the fact that all five 1994 defeats came to bowl-bound teams. In losses to Texas Christian University and the University of Oklahoma, the Jayhawks squandered fourth-quarter leads—the difference between an 8-3 record and 6-5.

"I guess you could say I’ve replayed those a few times," Mason admits. Specifically, he has replayed Kansas’ defensive pass coverage. Air traffic control problems against the Horned Frogs and Sooners sent Kansas crashing to defeat: TCU converted 13 of 15 third downs and OU eight of 15; many came in third-and-long situations.

Considering those numbers, it was no great surprise that Kansas in 1994 ranked 84th nationally in pass-efficiency defense, allowing 14 touchdown passes and sweeping only eight interceptions. Overall, the KU defense rated 80th.

Those dismal numbers led Mason to shake up his staff in the offseason. He fired defensive coordinator Bob Fello and defensive backs coach Mark Dantonio and changed the assignments of every assistant but offensive coordinator Pat Ruel and quarterbacks coach Dave Warner.

Now in charge of the defense is Mike Hankwitz, who jumped from the University of Colorado to Kansas after helping the Buffaloes develop one of the country’s better defenses. In the spring scrimmage, Kansas revealed a new 3-4 alignment. "It’s not only a change of philosophy," Mason says. "You hope to see a difference in execution. We were not very good at executing when we had to defensively last year. We have to improve upon our pass defense, which includes everything from our pass rush, under coverage by linebackers and coverage in the secondary."

On the other side of the ball, Mason begs to differ with those who would cast him as a rigid advocate of the ground-oriented attack he learned from Woody Hayes at Ohio State University. "I’ve always thought I should adapt to the abilities of my players," he says. "A lot has been said about us planning to throw the ball more this year. Well, why is that? The main reason is we’ve got two quarterbacks in Mark Williams and Ben Rutz who are strong passers."

Mason’s plans to pass more often contrast significantly with last season, when option-oriented Asheikey Preston led the offense and KU

MARK THIS DOWN: Coach Glen Mason made senior quarterback Mark Williams No. 1 in spring. The eighth-year coach thinks KU’s new two-back offense will balance better between ground and air—last year Kansas ranked 91st nationally with only 140.9 passing yards per game.
threw the football only 196 times—the fewest attempts by a Jayhawk team in 17 years. In the spring, senior Williams emerged as the top quarterback. But Rutz, a transfer from Northeastern (Okla.) A&M Junior College who started his career at Nebraska, showed a strong arm and quick release and still could challenge for starting honors.

Mason stresses he mainly wants better balance between ground and air offense. Kansas last fall averaged 247.1 yards rushing per game, eighth best in the country, but the Jayhawks were 91st in passing (140.9 yards).

Kansas is a bit thin in receivers, but senior wide-out Aashaundai Smith is one of the league’s best (22 catches for 426 yards in 1994) and senior tight end Jim Moore (16 catches for 242 yards) is a steady target. Look also for running backs I.T. Levine, June Henley, Mark Sanders and Eric Vann to catch more passes from a new two-back offensive set. “We’ve got some darn good running backs and you’ve gotta figure out ways to get them in the game,” Mason says. “If you just play in 1-formation, that means I’ve just got one in there and a bunch of good ones standing by me trying to help coach.”

Mason enters his eighth season at KU with a 33-45-1 record. The Jayhawks have had winning seasons three of the past four years, but only once earned a postseason bid. If Mason feels any urgency about bowling in the upcoming season, he’s not letting on.

“I’m worried about our first ball game,” he says. “That’s all I ever worry about this time of year.”

That will come soon enough, when the University of Cincinnati invades Memorial Stadium Sept. 2.

NCAA grants Kansas full certification

The Kansas athletics program has become one of the nation’s first to earn full accreditation from the NCAA, following a rigorous self-examination and peer review process that began in October 1993.

The self-study program was among reforms approved by Division I schools at the 1993 convention. Each school was asked to review its athletics program’s goals and missions and to consider how the program complemented the mission of the institution as a whole.

“I am pleased that the NCAA has recognized the fundamental integrity of the University’s athletics program,” Chancellor Robert E. Hemenway says. “The process has reaffirmed the pride we all can take in the way we operate our program.

“As I begin my work as chancellor, I pledge to build on our proud tradition and to ensure that our student athletes continue to receive the support they need in their academic pursuits.”

The self-study review process was conducted by a steering committee and four sub-committees comprising faculty, staff and administration as well as alumni, students and community members. They studied the athletics program’s academic and financial integrity, commitment to equity and governance, and commitment to rules compliance.

The results of their labors were published in September 1994 and forwarded to the NCAA. A peer group of administrators from other NCAA member institutions visited KU in November 1994 to meet with the self-study committee and others. It reported to the NCAA Committee on Athletics Certification, which grades programs on three levels: certified, certified with conditions or not certified. The latter two designations stipulate that schools must meet compliance or face restriction and, possibly, dissolution of membership. Kansas earned full certification; the NCAA committee found KU to be operating in substantial conformity with principles adopted by the Division I membership.

CITING FIRST AMENDMENT PROTECTIONS, a
U.S. district judge in late July dismissed women's basketball Coach Marian Washington's $10 million defamation suit against television analyst Dick Vitale and others for comments made about her in a pre-season publication bearing Vitale's name.

Washington is president of the Black Coaches Association and has amassed a record at KU of 410-242. She sought damages for a paragraph previewing the Jayhawks in the 1993-94 edition of Dick Vitale's Basketball magazine.

In the article, Women's Basketball News Service director Joe Smith wrote, "The Jayhawks are loaded with talent, with swingman Angela Aycoc and guard Charisse Sampson headlining the list. But Coach Marian Washington usually finds a way to screw things up. This season will be no different."

EMRQUE ABAVARO was just a freshman, but he did something no Jayhawk tennis player had done since 1977 when he advanced to the third round of singles competition at the NCAA men's singles championships in Athens, Ga.

Abaroa closed his first season with a 12-8 singles record, Big Eight No. 1 singles silver medal. Big Eight team championship and All-America honors.

On his way to the Sweet Sixteen, Abaroa upset junior Wimbledon champion Scott Humphries of Stanford in straight sets, a feat Coach Michael Center called "the best win we've had in the Kansas program."

Join the Alumni Association in cheering

PUT SOME EXTRA KICK IN YOUR SEASON

Help initiate a new home football tradition by joining the Alumni Association for pre-game tailgate parties.

The fun starts outside the Adams Alumni Center three hours before kickoff of every home game—

Homecoming festivities will move to a tent near the stadium (see inside front cover). All members and their families and friends are invited to dig into feasts that will include hamburgers, hot dogs, bratwurst and other tailgate favorites at reasonable prices.

Children can learn the Rock Chalk chant while you listen to live music and toast the season. Your Alumni Association membership card will admit you and your guests to tailgates throughout the season.

Bring your Jayhawk spirit and your appetite!

Corn dogs, nachos, cones of Snoop—
you stay down, no one knows

One brave diner’s dash across the state fairgrounds

not a picky eater. During a visit to Japan a few years ago, I ate a six-inch-long fish, the preparation of which can probably best be described as “sun-dried.” I’m the only person I know who displays a collection of canned variety meats on their bookshelf. One can contains something called “potted meat food product,” and among the ingredients is, I swear to God, “partially defatted beef fatty tissue.”

So I can say with all honesty that I have no fear of the food at the Kansas State Fair. Each September KU operates a booth at the fair in Hutchinson, rotating in a division or two of the University for a few days at a time. I’ve been going for 10 to 12 years, representing the Kansas Geological Survey. Last year we shared the space with staff from the School of Pharmacy, the Biological Survey, and the School of Medicine at Wichita.

Now your average academic can find symbolism just about anywhere, but I’m not real good at it. My wife once pointed out that if I can figure out the symbolism in a movie, it must be heavy-handed. Still, I think that changes in the food offerings at the fair reflect (ahem) an evolutionary societal change.

For starters, fair food symbolizes the growing diversity in the state’s population. When I first visited in the 1950s, fair fare was pretty much limited to hot dogs, hamburgers, and cotton candy. Today there’s Mexican, Greek, Chinese. I’ve eaten a pork enchilada that was as good as any Mexican food I’ve ever had, although I’ll admit that it’s hard to match the special ambiance created by bored carnies who yell remarks as you stuff your face while walking past the air rifle games and kewpie dolls (NOTE TO MYSELF: Next year, remember to take off your name tag while strolling the midway). With all the different foods available, I don’t know why anybody would go to the state fair to eat chicken and noodles. I mean, you can eat chicken and noodles at home, but how often do you get a chance to eat an entire French-fried onion?

The fair may be a little behind the curve when it comes to society’s concern about healthy eating. A few years ago, we shared the KU booth with some folks from the School of Engineering, and I remember that one of them ate a lunch that consisted of a hot dog and nachos. I pointed out that he was hitting most of the major food groups—bread in the hot dog bun, meat in the hot dog, milk in the cheese on the nachos, and vegetables in the jalapeno peppers. “Have a cherry Sno-cone for desert, and you’ll cover the fruit group,” I pointed out helpfully. “Then you can go eat junk food the rest of the day.”

by Rex Buchanan

Illustration by Jean Holmgren

Today a couple of places offer salad bars, but when I’ve been there, the lettuce looked like it had spent several years buried beneath the food pyramid. This year I saw one booth advertising “Healthy Food.” They sold baked potatoes. When I stopped by, they were out of baked potatoes. But they did have plenty of funnel cakes. One of the Wichita hospitals has a booth at the fair offering to check your blood for cholesterol, which is about like checking for sand in Saudi Arabia.

In fact, the fair’s most cholesterol-laden food isn’t even for sale. It’s at a booth sponsored by one of the ag organizations where they fashion some sort of sculpture entirely out of butter. One year it was a butter cow. Another year it was a butter lunar landscape (I think. Maybe I dreamed that one). My favorite year was during the Eisenhower centennial, when they displayed a life-sized butter Dwight and Mamie Eisenhower. Last year’s display was a butter draft horse, with a little butter cat sitting alongside. Very impressive, but it was no butter like and Mamie. The display was protected by armed guards, ready to wrestle to the ground anybody who approached too close with a box of crackers.

The most famous fair food is, of course, the corn dog. The Hutchinson version is known as “pronto pups,” and their motto is “The Banquet on a Stick,” which I think leaves something to be desired in the motto department. Maybe they should try “A Sliver in Every Bite” or “Fried Before Your Eyes.” Now I have several rules about eating (Rule I: Never eat anything you have to change the water on), but I find it impossible to resist any food that involves a paint brush (that’s what certain state fair vendors use to apply mustard to the corn dogs). Jim McCaulley, a Survey geologist, once used his scientific acumen to observe that the fair’s corn dog stands are spaced so that when you buy a corn dog and eat it while walking slowly, upon finishing you will invariably find yourself standing in front of another corn dog stand.

Even corn dogs carry their own significance. A few years ago, I noticed that the corn dog places had added spicy German mustard, along with the traditional neon-yellow kind. While this obviously represents a shift away from our xenophobia and suspicion of the exotic, I find it troubling that we’ve lost something traditional in the process.

Kansas still has a few new food vistas to explore. A few years ago, I heard that the Oklahoma state fair has a House of Carp. They serve broiled carp, fried carp, carp casserole, carp-on-a-stick. I have to admit to being a little jealous. Besides, carp probably beats the can of “Imitation” Vienna Sausage sitting on my bookshelf.

—Rex Buchanan is a science writer and assistant director of the Kansas Geological Survey.
PAY US A VISIT

SENIORS: This fall the Office of Admissions will host the sixth annual Crimson and Blue Preview days. Last October the program attracted 1,200 high-school seniors and their families. Students attend mock classes taught by award-winning faculty, dine at Mrs. E’s cafeteria in the residence halls, meet current students during panel discussions, and tour the campus, residence halls and scholarship halls. Dates for this fall are Oct. 2, 16, 23 and 30, and Nov. 13 and 20.

JUNIORS: In April admissions will host high-school juniors and their families for the fifth annual Junior Days. Last spring’s event attracted 1,000 students. These four days provide a brief overview of what KU offers academically and socially. Dates for next spring are April 8, 12, 22, and 26.
SELLING POINTS

• KU is one of the best values in the nation. U.S. News and World Report magazine last fall ranked KU 17th among public and private universities for price and quality of education.

Undergraduate tuition and fees for the 1995-96 academic year:
- $2,182 for Kansas residents
- $7,900 for out-of-state residents

Room and board for double occupancy in a residence hall:
- $3,544

• The typical class size is 25 students. Although a few lecture classes serve hundreds of students at once, about 90 percent of classes serve 50 or fewer students. Seventy percent have fewer than 30.

• KU ranks in the top 20 among public universities for the number of National Merit finalists who choose to attend each year.

• KU grants 2,400 academic merit awards that range from $100 to full-tuition scholarships, presenting about $4.2 million annually in scholarships to undergraduates.

• Teachers are distinguished in their fields. Ninety-five percent of faculty have PhDs or the highest degrees offered by their disciplines, and they teach 70 percent of undergraduate class sections. The other 30 percent of classes are led by some of the nation’s best and brightest graduate students.

WANT TO SURF?

You can reach KU by e-mail through the following addresses:

Admissions

Be sure to take a campus tour on the Internet.

BE A H.A.W.K.

Alumni may assist KU recruitment through the H.A.W.K. program (Helpful Alumni Working for KU). Through college fairs, letters, phone calls and special send-offs for freshmen, H.A.W.K. members help link students from their communities to the University. By sharing their college experiences, alumni provide proof that a KU education is invaluable.

To volunteer a few hours a month to the recruitment and enrollment efforts of the University of Kansas, you may join the H.A.W.K. program by contacting the Office of Admissions at 913-864-3911.

SUGGESTED ADMISSIONS TIMELINE

August - Receive KU Viewbook (includes application for admission, scholarship and housing).

September - Begin application for admissions, scholarships and housing.

February - Apply for financial aid using the Free Application for Federal Student Aid (FAFSA), available at your local high school. Also receive and complete housing contract.

March - Receive and complete New Student Orientation registration.

June - New Student Orientation begins.

August - School starts.

ADMISSIONS REQUIREMENTS

KU will admit Kansas residents who have graduated from accredited Kansas high schools. Out-of-state freshmen must have a cumulative "B" grade-point average, or an above-average ACT or SAT score, or have taken a college-preparatory curriculum.
The legal battle between Kansas and Colorado over water in the Arkansas River took a turn when KU scientists proved where the river ran dry. After winning the case, Kansas awaits the decision on how much Colorado owes in water and in dollars.

BY REX BUCHANAN
Every few years, after a wet spring or a snowy winter, a trickle of water inches its way down the dry riverbed of the Arkansas River in western Kansas. Locals come out to watch the stream's arrival. Newspapers track its progress, the way they would follow some exotic animal that had chanced into western Kansas.

Water in a river should not be a surprise.

But it is in western Kansas, where flow in the Arkansas River declined in the late 1960s and early 1970s, then stopped altogether, except for rare interludes when flow resumes for a few days or weeks, then stops, leaving a bone-dry river of sand, choked with tumbleweeds and bordered by dead or dying cottonwood trees. Fish and swimmers have been replaced by dirt bikes and farmers who argue over the right to grow crops in the riverbed.

If the Ark River ever routinely carries water across western Kansas, its rebirth will be caused, in part, by a combination of water lawyers, single-minded state officials, and scientific talent, including some KU experts in satellite imagery.

Many Kansans would like to blame the lack of water in the Arkansas on a large, rectangular villain just to our west: Colorado. At its headwaters near Leadville, the Arkansas is a clear, coursing mountain stream; by the time it reaches the plains of eastern Colorado, it is silt-filled, sluggish. By western Kansas, it's gone. Colorado must have done something, Kansans reason. Why, Colorado doesn't even pronounce the river’s name right—they say AR-kan-saw, we say AR-KAN-ZUS. Some Kansans point particularly to John Martin Reservoir, just west of the Kansas line, where a dam stops water that should flow into Kansas.

In reality, the reasons for the dry river are, like many environmental issues, multiple and complicated, and probably don't have much to do with John Martin. For starters, agriculture has changed dramatically in the past few decades. Farmers use terraces and stubble mulching and other practices that keep moisture on the ground.

That’s good. Except that by reducing runoff, less water is left to flow into rivers and lakes.

Another cause, like it or not, is irrigation. Rivers are self-regulating systems. During times of flooding, water moves from rivers into surrounding deposits of sand and gravel, called alluvial aquifers. During dry times, groundwater moves out of those deposits and recharges the rivers, sustaining the flow. Alluvial aquifers are the liquid equivalent of a savings account—during flush times the river puts water in the bank; in dry times the aquifer supports the river.

In the past 30 or 40 years, lots of irrigation wells have been drilled into those alluvial aquifers. Heavy pumping has lowered water tables to the point that the groundwater no longer keeps the river flowing during drought. Wallace Stegner, one of the American West’s best-known writers, once wrote that "...surface and subsurface water are not two problems, but one." We've proved it along the Arkansas River. In spades.

Farmers have been taking water from the Ark since the late 1800s. In the early days, they dug ditches that diverted water directly from the river. With that irrigation came disagreements about the amount of Ark River water that should flow into Kansas. Kansas filed one lawsuit against Colorado in 1907, another in 1943. Then, in 1949, with the completion of John Martin Reservoir, the two states formed an agreement, a compact, to help resolve disagreements and head off future arguments.

In 1949, with the completion of John Martin Reservoir, the two states formed an agreement, a compact, to help resolve disagreements and head off future arguments.

The compact worked for a time, at least until flow decreased, then all but stopped, in the early 1970s. About that time, David Pope lived in Garden City, where he was head of the Southwestern Kansas Groundwater Management District. "I had a firsthand view of the problem," Pope says. "Flows across the state line were low, there was no recharge. There was very little water in the river."

In 1978 Pope moved to Topeka and joined the Division of Water Resources, a branch of the state agency that is now known as the Kansas Department of Agriculture. In 1983 he became chief engineer for the Division (called, in state agency lingo, the DWR). That made Pope, for all intents and purposes, the final voice in water regulation in Kansas. And he was the driving force when, in 1985, Kansas filed suit against Colorado again for failing to live up to terms of the 1949 compact.

Suing another state is no ordinary day in court. The rules change. For one thing, the case goes straight to the U.S. Supreme Court. And because such cases can be so technical and time consuming, the Court appoints a "Special Master" to hear the case and, in effect, make a

---

Areas delineated in red are irrigated fields, as identified by Colorado. The infrared image provided by KU scientists shows that many of these areas were in fact not actively irrigated. The area represented is 20 miles west of Garden City in Finney County, including Lake McKinney in Kearny County.

The work was funded by the Kansas Department of Agriculture's Division of Water Resources and KU's Center for Research Inc.
Colorado let farmers drill about 1,500 “post-compact irrigation wells,” that is, wells drilled after the 1949 agreement, in the Ark River alluvium. Those wells, Kansas claimed, were taking away huge amounts of water that should have been recharging the river.

In its case, Kansas claimed that Colorado reduced the river’s flow in three ways. First, Colorado was keeping too much water in Trinidad Reservoir, a lake in southeastern Colorado on the Purgatoire River, a tributary of the Arkansas. Second, Colorado was storing and using too much of the Arkansas River flow into Pueblo Reservoir. Third, and most telling, Colorado let farmers drill about 1,500 “post-compact irrigation wells,” that is, wells drilled after the 1949 agreement, in the Ark River alluvium. Those wells, Kansas claimed, were taking away huge amounts of water that should have been recharging the river.

Once the suit was filed, both sides began preparing for trial, discovering evidence, analyzing data. “Colorado fought us on everything,” says Leland Rolfs, 1/26, a DWR attorney and the liaison between DWR and the lawyers hired by the Kansas attorney general’s office to argue the case.

One way Colorado fought back was through a counter-claim that Kansas had created its own water problems. In particular, Colorado said, an irrigation boom along the Kansas portion of the Arkansas, especially in the area west of Garden City, caused the river to go dry.

“Colorado claimed that Kansas had developed many more irrigated acres after 1949,” Rolfs says, “and if the wells to irrigate those acres hadn’t been sucking water out from under the river, you would have more surface flow in the Ark.”

Colorado came into court with topographic maps showing areas of new irrigation in Kansas. Those maps were based on aerial photographs, or those taken by airplanes from 30,000 feet above the ground.

David Pope contacted the Kansas Applied Remote Sensing program at KU; associate director and geographer Kevin Price checked Colorado’s methods and figures. Price, who had just come to KU from Utah State University in 1989, was one of the few people in the state who’d never heard of the case. But he quickly saw the problems with Colorado’s methods.

“Black-and-white photography is inherently difficult to interpret,” Price says. “It’s not just a case of counting irrigation circles. You have to be able to determine where the soil was wet, even when photos were taken in August. They were only about 50 percent accurate.”

Instead of using aerial photography, Price and Re-Yang Lee, Taipei, Taiwan, graduate student, used more precise images, taken from the Landsat satellite, launched in 1984 by NASA and now operated by EOSAT, a firm in Lanham, Md. The infrared photos from Landsat show where plants are actively growing, so Price could delineate not just the circles from center-pivot irrigation but rectangular fields that have been flooded for irrigation.

The high-resolution infrared images allowed KU researchers to pinpoint irrigated ground. Price showed that Colorado’s methodology had led to inflated claims about the number of irrigated acres in Kansas. The Colorado counter-claim went belly up.

“We discredited Colorado’s information ... during cross-examination,” DWR attorney Rolfs says. “We used this information to help make sure that their counter-claim wasn’t correct.”

David Pope concedes that “we do have problems in

In 1989 the Kansas Applied Remote Sensing program contracted with the Kansas Water Office to produce a landcover map that would serve as the basis for water usage plans. The map also is used by wildlife and parks officials and county planners. The work was funded by the Kansas Water Plan administered by the Kansas Water Office and the Department of Wildlife and Parks.

24 AUGUST/SEPTEMBER 1995
southwestern Kansas. But that’s not the issue. [Pumping in southwestern Kansas] doesn’t cause problems in Colorado. We needed something as a crosscheck on evidence provided by Colorado.”

Price’s work provided that crosscheck, but it was just one part of the trial, held in Los Angeles from September 1990 until December 1992. The Special Master submitted a draft report to each side in early 1994, then a final report in July 1994. The Supreme Court reviewed the report and Chief Justice William Rehnquist wrote the opinion that, in May 1995, upheld the Special Master’s view that the Kansas complaints about Trinidad and Pueblo weren’t relevant. But Rehnquist agreed with the Special Master that those post-compact wells were a problem.

Nobody knows for sure how much water those 1,500 wells take away from the river. Most of the wells don’t have meters. The best guess is that they’ve been removing 150,000 acre-feet of groundwater every year. That’s enough to cover 234 square miles with a foot of water, or more than 48 billion gallons. That’s a lot of water in a country that averages 15 inches of precipitation per year.

Having determined that Colorado was at fault, the trial now moves into its next phase, one to determine remedies for the current problem and compensation for the past. The phase, just gearing up and likely to last several years, will determine a way for Colorado to deliver Kansas’ share of water as agreed upon in the compact. Colorado must also reimburse Kansas for the water—however much that is—that it should have delivered.

"There will be compensation and remedies," Rolf says. "Compensation could come in the form of more water or money or both."

For his part, Pope seems determined to see more water back in the river.

“They will probably pay in money for past damages," says Pope, "but I expect water, too. They would probably buy water rights in the area (southeastern Colorado) to assure future supply. Or they might have some transmountain water (water from the west slope of the Rockies) that they could use. At some point, we'll see incrementally more water than we get now."

 Plenty of issues remain, including concerns about the quality of the water that will be returned to the river. And Kansas irrigation wells will continue to affect the Ark.

"Nobody envisions a return to the days of bank-to-bank flow," says Rolfs. "There are six active irrigation ditches between the state line and Garden City, and they have water rights, too. But this should put tens of thousands of acre-feet of water back in the river."

Don’t think this closes the book on Great Plains water wars. For the past several years Kansas officials have been talking with their counterparts in Nebraska about the Republican River, which enters the state in northern Kansas and dumps into the Kansas River at Junction City. Just downstream are several cities that depend on the Kaw for their water. Kansas and Nebraska have a compact concerning water in the Republican. But lately, Kansas claims, Nebraska’s been delivering too little. Folks in Lincoln undoubtedly took notice of the Supreme Court’s decision on the Ark.

"I hope we can resolve this and there’s some chance that we can, but the window’s closing," Pope says. "We’re committed to getting our water."

Meanwhile, inside Nichols Hall on West Campus, Price continues to refine remote sensing techniques. In a long, windowless room decorated with maps, satellite photos, and a lone Garfield the Cat poster, graduate students use powerful computer workstations to call up and analyze images. "Now we can determine different crop types, not just irrigated versus non-irrigated land," Price says. He shows days-old satellite photos of the nation and describes their uses.

And out in western Kansas, a trickle of water creeps down the Ark River streamed, created by 1995’s above-average snowpack in the Rockies and heavy rains late in the spring. The river, left for dead, hasn’t surrendered. Give it time—and more water. Maybe someday it’ll be back for good.

"For our discussion is on no trifling matter, but on the right way to conduct our lives."

—From Plato's Republic

As a student you thought Western Civ was trivial, maybe even torturous. But now the ideas in those lofty books perhaps seem clearer, more connected to real life. Western Civ can grow on you as you grow up.

This year the program turns 50.

But another challenge awaits. Western Civilization, known in KU shorthand as Western Civ. Older friends have more colorful names for it. They get queasy at the mere thought of the two-semester gauntlet of great books.

You stare at the volumes. The authors' names sound vaguely familiar. Isn't Machiavelli an Italian sports car? Don't Mom and Dad have a dining-room set by Wollstonecraft?

Hope glimmers in the fact that each semester more than 2,000 students face the same imposing task. Since the program began 50 years ago, more than 75,000 students have endured it. If you want a degree in liberal arts, journalism or social welfare, you either take Western Civ or transfer to another school. So you open covers and start reading.

Your instructors hope you'll discover that the words, even the archaic ones, still resonate. Start with Plato. His favorite character, Socrates, says that admitting ignorance is the only way to gain new knowledge.

Plato also writes that if you don't first learn who you are and what you believe you'll stay dumb as a rock.

Teachers in the program say that's the point—and the reason Western Civ has persisted all these years. This is personal. It tells us why we go to church or synagogue, why we gather at the dinner table, why we send law-breakers to jail.

Jim Woelfel, a professor of philosophy and director of the program, says Western Civ exposes our roots. "A well-educated person," he contends, "should have at least a basic acquaintance with some of the more important authors, writings and ideas that shaped the values, the thoughts, the institutions of the Western world."

Framers of the course, still reeling from World War II, were equally adamant about the need. The first manual included this statement: "Several times within a generation the United States and many other countries have suffered from economic depressions...unemployment, poverty and hunger...The motive of the administration and faculty in requiring a reading course in Western Civilization is precisely that of bringing this situation and its problems more consciously to the minds of students today, that they may be ready to live constructively in a complex world tomorrow."

Kansas was among the first public universities to require Western Civ. James Seaver, who started teaching in the program shortly after coming to the Hill in 1947 and served as director from 1957 to 1984, says the program was modeled after great books courses at Oxford University in England and Columbia University in New York City. The first students had to read on their own from library texts (compilations that had been printed for the Columbia program), then pass a comprehensive exam worth three hours' credit. Proctors offered help on demand. But in the 1950s faculty recognized that students were bypassing the library and their proctors and instead were buying notes from test veterans.

In response, director Seaver, with new liberal arts dean George Waggoner and faculty, added regular discussion sections to the readings program. The Kansas Union Bookstore started selling paperback copies of the classics, and works unavailable in paperback were gathered in the program's own Collected Readings, which endures today. "The idea was that students would form a little library of their own," Seaver recalls. "And they had no more excuses for not reading the materials."

Seaver and the Western Civ committee also discarded secondary writings and instead assigned primary texts with supporting materials only to add historical context. "It seems to me that you're viewing through a glass darkly if you don't go through the source itself," Seaver says.

Despite the new format, the comprehensive exam still loomed—keeping the notes business thriving. The Nov. 6, 1959, University Daily Kansan reported that a group of four students had netted nearly $1,500 in a year by selling 100-page mimeographed notes for 84 each.

The underground notes business blossomed in the '60s, recalls Bill Getz, c'65, assistant manager for books at the Kansas Union Bookstore who took the class in '61. The most popular set of notes then came from a campus fraternity, he recalls. "It was just on the border of legality."

From 1967 until 1993 Western Civ notes went above ground with the publication of The Analysis of Western Civilization, a controversial collection edited by Roger Doudna, c'63, g'70, PhD'73. Faculty frowned on the softcover compilation, citing mistakes in both fact and philosophical interpretation.

Seaver says, "There were arguments that we shouldn't allow KU to continue to resist a national trend to rewrite Western Civ as a World Civilization program—what Woelfel calls "add non-Western and stir." Instead KU in 1987 added a requirement that students complete at least three credit hours in a non-Western culture course.

this to happen, but I've been against suppressing books all my life. We always warned students that there were serious errors in the Analysis and they used it at their own peril. One egregious error dubbed Adam Smith, a proponent of capitalism, the father of socialism.

Getz, who for three years has led an honors discussion group as an adjunct instructor, says students petitioned to have the Analysis stocked at the KU Bookstore; as a compromise, the store sold notes only to students who listened to a disclaimer.

"We basically recited a litany that the program did not approve and that the notes were not part of the approved class materials," Getz says. "We never had a single person who didn't buy them after being given that spiel."
Since Western Civ started in 1945, controversial texts have been added and subtracted while classical works have endured. The following lists from the first and the most recent classes are presented in order of assignment, omitting the readings from textbooks and other secondary sources. In most cases students read assigned portions rather than complete books.

1945-46

Niccolo Machiavelli, The Prince
Martin Luther, Address to the Christian Nobility of the German Nation
John Calvin, Institutes of the Christian Religion
Sir Thomas More, Utopia
Thomas Mun, England's Treasure by Foreign Trade
John Locke, Of Civil Government
Baron de Montesquieu, The Spirit of Laws
Voltaire, Religion
Jean-Jacques Rousseau, The Social Contract
National Assembly of France, The Declaration of the Rights of Man and of the Citizen
Bernard de Mandeville, The Fable of the Bees
Francois Quesnay, Natural Right
Adam Smith, The Wealth of Nations
Thomas Malthus, An Essay on Population
Karl Marx and Friedrich Engels, The Communist Manifesto
Percy Bysshe Shelley, Declaration of Rights
John Stuart Mill, On Liberty
Giuseppe Mazzini, Duties Toward Your Country
Lord Robert Cecil, The Moral Basis of the League of Nations
Pius XI, Encyclical Letter on Social Reconstruction
The Federal Council of Churches of Christ in America, Social Ideals of the Churches
John Dewey, Liberalism and Social Action
Roosevelt and Churchill, Atlantic Charter
United Nations Charter
The Declaration of Independence
The Constitution of the United States
James Madison, The Federalist
Alexis de Tocqueville, Democracy in America
Abraham Lincoln, First Inaugural Address
Walt Whitman, Leaves of Grass
Herbert Hoover, The Challenge to Liberty
Herbert Agar, Pursuit of Happiness
Stuart Chase, The Road We Are Traveling
Joseph A. Leighton, Social Philosophies in Conflict
Eric Fischer, The Passing of the European Age
Carol Becker, How Now Will the Better World Be?

1995-96

Epic of Gilgamesh
"The Weighing of the Pharaoh's Heart," from Egyptian funeral texts
"Song of Isis," from Egyptian tablets
The Hebrew Bible
Sophocles, Antigone
Plato, Apology, Crito, Phaedo and The Trial and Death of Socrates
Aristotle, The Politics
Seneca, Letters from a Stoic
The New Testament
The Acts of Thecla, A Second Century Christian Convert
Augustine, Confessions
"The Table" from The Koran
Moses Maimonides, The Guide for the Perplexed
St. Thomas Aquinas, On Politics and Ethics
Geoffrey Chaucer, "The Wife of Bath: Prologue & Tale" from The Canterbury Tales
Christine de Pizan, The Treasury of the City of Ladies
Niccolo Machiavelli, The Prince
Martin Luther, An Appeal to the Ruling Class of the German Nationality
John Calvin, Institutes of the Christian Religion
Galileo Galilei, The Starry Messenger and Letter to the Grand Duchess Christina
Rene Descartes, Discourse on Method
Jean-Jacques Rousseau, A Discourse on Inequality
John Locke, Second Treatise of Government
Edmund Burke, Reflections on the Revolution in France
Thomas Paine, Rights of Man
Mary Wollstonecraft, A Vindication of the Rights of Women
James Madison and Alexander Hamilton, The Federalist Papers
John Stuart Mill, On Liberty
Charles Darwin, The Origin of the Species and The Descent of Man
T.H. Huxley, The Struggle for Existence in Human Society
Auguste Comte, The Positive Philosophy
Albert Einstein, Ideas and Opinions
Jacob Bronowski, Science and Human Values
Karl Marx & Friedrich Engels, The Communist Manifesto
Adam Smith, The Wealth of Nations
Andrew Carnegie, Wealth
Charlotte Perkins Gilman, Women and Economics
W.E.B. Du Bois, The World and Africa
Octavio Paz, The Labyrinth of Solitude
John Neihardt, Black Elk Speaks
Aldo Leopold, The Land Ethic
Friedrich Nietzsche, Twilight of the Idols
Fyodor Dostoevsky, "The Legend of the Grand Inquisitor" from The Brothers Karamazov
Sigmund Freud, "Reflections Upon War and Death" from Character and Culture
Simone de Beauvoir, The Second Sex
Virginia Woolf, A Room of One's Own
Elie Wiesel, Night
Martin Luther King, Jr., Letter from Birmingham Jail

28 AUGUST/SEPTEMBER 1995
The ’60s and ’70s put Western Civ on trial nationwide; many programs were rewritten or canceled to appease rebellious students. KU modified its reading list and testing process but maintained the basic course structure. “At a time when Western Civilization programs were being discarded at major institutions all over the United States, including my alma mater, Stanford,” Seaver recalls, “we bowed a little but did not break.” At Stanford today, he says, “you can take a year of Western Civ in the feminist tradition, the traditional tradition, the black tradition and so on. There’s not much attempt at integration.”

Since the stormy ’60s the Kansas program has incorporated works by diverse writers. The current list includes Virginia Woolf, Elie Wiesel and Martin Luther King Jr. (see sidebar). With a grant from the Hall Center for the Humanities, Woelfel in 1990 offered course instructors workshops on African-American literature, writings of Islam, Jewish heritage and feminist theory.

KU has continued to resist a national trend to rewrite Western Civ as a World Civilization program—what Woelfel calls “add non-Western and stir.” Instead KU in 1987 added a requirement that students complete at least three credit hours in a non-Western culture course.

James Muyskens, dean of liberal arts and sciences who has led Western Civ sections, says the College has discussed developing a parallel program in Asian and African civilizations. Melding all into one year-long program would dilute the readings too much, he says. “It becomes so broad that it’s hard to know what your criteria for inclusion or exclusion would be.”

Testing methods, however, have changed. In 1978 KU replaced the comprehensive exam in most cases with final exams for each semester—although until 1987 the comprehensive exam remained an option for credit.

The reading list and course formats remain under constant review and revision. When Jim Woelfel became director in 1985, he helped win a two-year, $120,000 grant from the National Endowment for the Humanities to rework the curriculum. The funds enabled KU for the first time to employ six half-time faculty members; previously all faculty except the director had been volunteers, with graduate teaching assistants bearing the heaviest teaching load. In 1994 and 1995 the College appointed three distinguished lecturers in Western Civ: Jaroslav Pieckalkievicz and Paul Schumaker of political science and Robert Anderson of French and Italian.

Woelfel has brought national attention to Kansas. In 1990 and 1991 he served with Robert Anderson on an Association of American Colleges panel to help schools nationwide revive or revamp their great books programs. Supported by NEH, Woelfel and Anderson consulted with six universities; leaders from Auburn University, The State University of New York at Buffalo and the University of Montana visited KU for pointers.

Woelfel collaborated with Sarah Chappell Trulove, g’82, an adjunct instructor and his wife, to edit a textbook that provides in-depth context to the readings. Patterns in Western Civilization was published in 1991.

The couple in 1993 developed an independent study Western Civ program that now serves about 100 students annually.

Students in recent years have ventured beyond the classroom—and those tiny Wescoe Hall discussion rooms—for special films and field trips on campus and beyond. A self-guided tour of the Wilcox Classical Museum in Lippincott Hall, for example, reveals items that bring ancient pages to life: a weep lamp like the one that may have illuminated Plato’s writings, a replica statue of the Greek goddess Nike that was carved just after Sophocles wrote “Antigone,” coins Seneca might have spent in the Roman marketplace.

To ponder European thought at its source, students now can earn their six Western Civ credits during a semester in Florence and Paris. This spring 26 students peered through a lens from the telescope through which Galileo discovered four of Jupiter’s moons. They visited the Louvre and saw the original statue of the goddess Nike. They debated the assets of a good society in the Palazzo Vecchio, the seat of government in Florence for the past 700 years and site of Machiavelli’s office. Woelfel plans to make the spring semester abroad an annual event: Twenty students already have signed up for next year.

Such options may make alumni yearn for a chance to take the course again. But even in its old styles, Western Civ won admirers. During travels nationwide Muyskens has quizzed alumni about their experience. “Of all the courses we offer this one is unique in picking up fans years later,” he says. “A typical comment was, ‘I didn’t appreciate that course when I took it, but I thought more about the ideas in that course than any other.’”

Another comment was, “Boy would I like to take that course now.” Western Civ seems to build love-hate relationships. But with the right attitude, that pile of books turns from imposing to impossible to put down. Seaver recalls an honors student who crossed his arms and refused to embrace a single idea in the first semester. “He obviously thought some of this stuff was pretty much beneath him,” Seaver says.

“But at the end of the term, after the last discussion session, he broke down and wept. He said, ‘When I graduated from high school I thought I really knew what things were about. There are so many new ideas that I never conceived of; I’m not sure of all these things.’”

It took a semester, but Plato had broken through. Admitting ignorance is the only way to gain new knowledge.

production, Sartre’s “No Exit”

KANSAS ALUMNI MAGAZINE 29
When I was a boy, about 10, I confronted the question that eventually confounds all young boys: If I dig a hole from my backyard straight through the earth, where would I come out?

Being a cautious child, I decided to look into this before I sank a spade through the asparagus and wild strawberries.

I took a wad of string to school and wrapped it once around the equator of the classroom globe. I cut it there, and then cut it in half. In my palm lay half the circumference of the world.

Mashing one end onto central Kansas with my left thumb, I stretched the string down and across, as far as it would go. By some typical miscalculation, the frayed end played out near China's western border, and I savored the exotic names: Afghanistan, Tajikistan, Kirghizia....

Today, 30 years later, Kirghizia is Kyrgyzstan, a former Soviet republic closed to foreigners until 1991. I'm still in the classroom, now a professor in the William Allen White School of Journalism and Mass Communications. And to the delight of that 10-year-old and his wad of string, six colleagues and I spent two weeks in Kyrgyzstan this past summer. The United States Information Agency and the Eurasia Foundation sent us to teach the basics of a free press.

With me were journalism professors Tom Volek, Bob Basow and Mike Kautsch, dean of journalism. Terry Weidner, associate director of the Center for International Studies and Programs and a courtesy professor in the history department, accompanied us. We also took two of our Russian-speaking graduate students, Rodica Cinciceli from Moldova and Sveta Novikova from Kyrgyzstan itself. The Blazer Boys, we called ourselves, for the indestructible navy blazers that most of us packed and continually wore.

Bob had spent the past year taking Russian lessons, so on the journey over through seven cities in five nations on three continents, he and our grad students taught us the essentials: good morning, thank you, you're welcome and beer. During the four-hour drive from Almaty, Kazakhstan, to Kyrgyzstan, which lacks an adequate airport, he spoke Russian with our Kyrgyz guides.

What, they asked, was the dominant industry in Kansas?

"In Kansas," Bob replied carefully, "farmers produce flies to make bread."

A respectful silence gave way to gentle questioning, and Bob learned the difference between the Russian words for flies and flour.

Bishkek, the Kyrgyz capital, was once a beautiful city. Older homes are trim and elegant, and the snow-capped Ala-Too mountains to the south show why Kyrgyzstan was called the Switzerland of the Soviet Union. But a mid-century Russianization filled the city with shabby 8- to 10-story concrete apartment blocks. We stayed in such a building.

Street vendors peddle sausage, chocolate bars, vodka, pornographic bubble-gum cards... At sidewalk marketplaces we bought the bread, cheese and bottled water that made up much of our diet.

The vendors quietly try to catch your eye, almost looking away if they do. They rarely speak. Twice they refused to accept our mistaken overpayments.

Remnants of Soviet-style central planning plague Bishkek. Three days after we arrived, the city turned off its hot water. Bishkek heats water in a central plant, which could no longer pay its gas bill to Uzbekistan, a resource-rich neighbor.

After four days of ankle-deep baths in stove-heated water, Tom snapped, "Call

OYS IN BISHKEK

By Chuck Marsh

Uzbekistan,” he ordered, grabbing his wallet, “and see if they’ll take Visa.”

For our lectures at Kyrgyz Technical University, we used three laptop computers, a digital camera, a video camera, a projection pad that channeled images from the computers to an overhead projector and a few miles of cable. With all that strapped on our backs en route to our first lecture, we entered an echoing, gothic auditorium with nine unlit chandeliers and the dank odor of old theater curtains.

Terry stared at the auditorium, then at our backpacks. “I feel like the Ghostbusters,” he whispered.

Our lectures, via a translator, progressed from basic journalism to American communications law to advertising and public relations. We located a brighter classroom and soon had an overflow of professional journalists, beginning entrepreneurs and university students.

Their questions always returned to an alien notion: Were American journalists really free to pursue the truth no matter where it led?

Our answer, touching on rare restrictions such as national security, was yes—and that such freedom required a responsible news media.

Our finest hour was underscored by a joke one of us told when, exhausted from teaching all day and rehearsing for the next, we sat in our tiny kitchen over white wine and chocolate bars. The sanitized, condensed version: A man owns an octopus named Ollie that can play any musical instrument. Finally a cynic produces a set of bagpipes that baffles a curious Ollie.

“Aha,” says the cynic. “You lose.”

“Nope,” says Ollie’s owner. “As soon as he decides that he can’t make love to it, he’ll play it.”

The first Wednesday was our most important lecture day. We were moving into communications law, advertising and
public relations, the topics that most interested our students. Tuesday night, we discovered an unfixable technological error that prevented us from using our prepared videos. We worked most of that night modifying the lectures and building new computer charts.

The next morning, as Tom led off, Bob and Rodica frantically translated my new overheads, programming them into a computer for projection onto the large screen.

Four things then happened in short order: Bob finished my charts, Tom concluded, I rose to speak—and our intricate computer system crashed. "I'll just delete for five minutes," Bob whispered.

I stretched my introduction, furtively watching Bob push buttons and twiddle dials. He was beginning to sweat. Just as I felt the first beads on my own forehead, Bob smiled and my first chart, in Russian, flickered onto the screen behind me. Somehow, like my colleagues, I gave my best lectures that unnerving day.

Bob was up next, and as I dropped into my chair, he whispered proudly, "I feel just like Ollie."

"I feel," I whispered, "like the bagpipes."

Our weekends were our own, and with Sergei, Svetla's 18-year-old brother, as a guide and interpreter, we hiked in the Ala-Too mountains south of Bishkek and ventured to Issyk-Kul, a mountain-ringed lake in eastern Kyrgyzstan.

After urging us up a perilously steep trail in the Ala-Too, Sergei allowed us to stop at a tumbledown cabin wedged between two boulders. When we could breathe again, we asked Sergei about the cabin.

"Oh," he said, "Was for who broke the bones from climbing."

Our driver on the Ala-Too excursion had been an environmental engineer in Soviet Kyrgyzstan. "Now," he said, shrugging, "I am a driver." He spoke of his desire to emigrate to Vancouver, where his uncle lived.

Sergei shook his head and explained that ethnic Russians were leaving for Russia, Germans for Germany, and so on. "I cannot understand," he said. "Who will stay in our country?"

A radio journalist later told us that she too was leaving, returning to her native Poland. As an ant crawled slowly along the coffee-stained windowsill next to her, she explained the former allure of Kyrgyzstan. There is, she said, an old Russian proverb. It is better to see once than to hear 100 times.

The future troubles the Kyrgyz, so some ignore it. As we walked through a dusty, makeshift marketplace with two young Kyrgyz journalists, I asked them what life in Kyrgyzstan would be like in five years.

"In 1989, we dreamed that things would be better," said one young Kyrgyz.

"But—" and she gestured at the crumbling concrete, the smoldering trash heaps, an old man buying empty bottles to resell.

"But now we have no dreams," her companion said.

On June 2, 15 days after we arrived, Svetla, Tom and I left for the airport in Kazakhstan at 2:30 a.m.

Bishkek by night must be the world's darkest city. In fact, it becomes another city, where shadows move against shadows and lone street vendors hunker down in isolated slivers of light. As our car turned north toward the border, flames from a trash bin leaped toward the road. In the flickering light, young men wandered around an alcohol vendor. Two bent over a chessboard.

As the darkness returned, I recalled the measured words of an American diplomat I had met in a small restaurant. "We're building a completely self-sufficient embassy outside of town," he said. "Our official projection is that the Kyrgyz infrastructure will continue to decline. That's cold-blooded, but it's the official
CAPITALISM IN KYRGYZSTAN is an open-air affair. Street markets dominate urban commerce.

KU GRADUATE STUDENT Svetl Novikova, second from left, translates as the Blazer Boys interview a station manager at Radio Almaz.

THE LOGO OF RADIO ALMAZ, one of Kyrgyzstan's few successful commercial stations, shows the panache of English in a former Soviet republic closed to foreigners until 1991.

projection.

We continued north in silence, stopping only at a Kazakh-border checkpoint, where soldiers first eyed and then ignored us. We turned east toward Almaty and the dawn.

Mike, Terry and Rodica had left a week earlier. Bob stayed a week longer to practice his Russian with journalists, professors, street vendors, strangers—even, in the late hours, with a trained parakeet who shared his bedroom.

As his departure neared, he began to doubt his ability to talk his way through the bureaucracy and onto the plane to Istanbul.

"I began to consider who could go with me to translate," he said, "and that parakeet began to sound pretty eloquent.

"But I had visions of a Kazakh customs official glaring down at us and demanding

"Where did you get that?"

"And the parakeet would answer, 'Oh, I found him at the bazaar.'"

Bob returned safely, as did we all. I flew to Dallas to pick up my wife and 5-year-old son, who had been visiting relatives. On the drive back to Lawrence I told stories from the trip, all the while seeking an anecdote or a Russian proverb that closed the adventure. It's better to see once than to hear 100 times? The shimmering stars over Issyk-Kul? Sitting in an open window with Tom on the Istanbul layover, drinking ice-cold beer and watching the loud parade of Western luxury?

My story-crafting was interrupted by six words from the back seat that galvanize any parent: "I have to use the bathroom!"

We had just crossed the line into Kansas, so we pulled into the tourism center. Mission accomplished, I went to the information counter for coffee and a new map. A woman there offered me a Coleman cooler if I'd take just five minutes to answer a few questions about Kansas.

OK. Yes, I liked this tourism center. It seemed very complete, yes. Yes, I was a resident.

"One more question," she said. "Did you travel more than 100 miles from home on this trip?"

For a second, I considered telling her about the hole in the back yard, about Bishkek, Issyk-Kul, and the brave, generous Kyrgyz.

And then I said, "Yes."

Chuck Marsh, '77, '80, '83, Ph'D '85, is an associate professor of journalism.
Ellsworth medallions go to 3 KU loyalists

The Fred Ellsworth Medallion celebrates 20 years this fall as Max G. Falkenstien, Lawrence; Dale W. Gordon, Wichita; and William M. Houglund, Lawrence, receive the award, the Alumni Association’s highest for service to the University.

The three will be guests of honor at a dinner of the Association’s Board of Directors and University leaders Sept. 22 at the Adams Alumni Center.

Since 1975 the Association has given medallions in memory of Fred Ellsworth, the Association’s longtime executive secretary, who retired in 1963 after 39 years of service. Winners are chosen by representatives from the Chancellor’s Office and the Alumni, Athletic and Endowment associations.

Falkenstien, c’47, is known as the “Voice of the Jayhawks.” This season he begins his 50th year of broadcasting Jayhawk basketball.

His radio career dates back to his days at Lawrence High School, when he worked as a part-time announcer for WREN radio in Topeka while remaining active in band and other high school activities. His leadership abilities also developed during these years; he took on the duties of president of his freshman, sophomore and junior classes and Student Council President his senior year. The Lawrence High School Alumni Association recently honored him as one of the first two inductees into the Hall of Honor.

After serving in the U.S. Air Force in World War II, he entered the University of Kansas and studied mathematics. He established the KU Sports Network while working his way up through the ranks of WREN and WIBW radio stations. The Kansas Broadcasters bestowed the Hod Humiston Award on Falkenstien for his “outstanding contribution to Kansas sports broadcasting.”

For the University he was an Association Board member from 1969 to 1974, including service to the national Nominating Committee and the Kansas Honors Program, the Association’s program to honor academically talented high school seniors throughout the state. For the department of intercollegiate athletics he is a member of the Williams Educational Fund.

A leader of many organizations, he presently chairs the board of trustees of the Kansas Sports Hall of Fame and has served as a board member since 1988. He is a past president of the Kansas Broadcasters Association as well as the Topeka Park Board and the Topeka Rotary Club.

He has worked on the boards of the Topeka and Lawrence United Way, and has served on the statewide public relations committee of the Kansas Division of the American Cancer Society.

He helped plan and establish the cable television system of Lawrence before shifting to the banking profession in 1972. While serving as senior vice president of Douglas County Bank of Lawrence, he chaired the advertising-marketing council of the Kansas Bankers Association and the advertising committee of the American Bankers Association. He was also a member of the ABA Communications Council and the advertising council of the Bank Marketing Association.

Falkenstien and his wife, Isobel Atwood Falkenstien, c’50, live in Lawrence. They have two children, Jane Hart and Kurt, b’77.

Gordon, b’43, is the principal shareholder in Jungkind Photo-Graphic, a graphic supply, art, and photographic business with branches in Arkansas, Tennessee, Louisiana and Texas, and former owner of Lawrence Photosupply in Wichita.

He is an avid supporter of KU athletics and the School of Business, having contributed $1.1 million to Campaign Kansas in 1989 for these programs, in addition to pledging the proceeds from a $1 million life insurance policy. He is a Chancellors Club and Williams Educational Fund member. In the business school he established the Gordon Undergraduate Fellows Program, a faculty mentoring scholarship program for students. He is a member of the school’s Board of Advisors and the
School of Business Dean’s Club.

He was a 1992 recipient of the Alumni Association’s Mildred Clodfelter Alumni Award for his longtime volunteer work for KU in the Wichita area, including membership in the Jayhawks for Higher Education, the Association’s statewide group that communicates the needs of higher education to the Kansas Legislature.

Gordon’s career offers lessons for business students. Born in Waldo to parents who never attended school, he worked his way through high school and college selling shoes. In his senior year at KU he was elected to Beta Gamma Sigma, the business school’s honorary academic fraternity. Entering the U.S. Naval Reserve while attending college enabled him to complete his education at KU and earn him the rank of ensign, performing active duty on an assault transport in the Pacific in 1944-45.

He worked as a CPA for several years before purchasing a failing photo supply store in Wichita in 1961. By the second year of his ownership the store, Lawrence PhotoSupply, rung up healthy profits. He expanded operations, purchasing more floundering stores in the region and duplicating the success of his first store. When sold in 1981, Lawrence PhotoSupply had more than $49 million in annual sales.

In 1965 he acquired a similar operation when Eastman Kodak representatives contacted him about buying and improving one of their Little Rock franchises, Jungkind Photo-Graphic. Gordon employed his successful management principles to create a network of stores that now generates more than $84 million a year in gross sales.

Gordon and his late wife, Gladys B. Gordon, assoc., have two children, Stephen, b’71, and Pamela, c’72. He has two grandchildren.

Hougland, b’52, is best known for his contributions to KU basketball as a member of the 1952 NCAA championship team. He went on from KU to earn two Olympic gold medals as a member of the 1952 and 1956 U.S. Olympic basketball teams. At the apex of a successful business career, he served as president and CEO of Koch Industries in Wichita before retiring in 1991.

Hougland led the Association as chairman from 1992 to 1993, and he remains a member of the Board of Directors and its Executive and Corporate Sponsorship committees. He has served on the Finance Committee, Jayhawks for Higher Education and the committee to plan and build the Adams Alumni Center in the early 1980s. His earlier work for the Association included a stint as Wichita chapter leader from 1961 to 1962 and a term on the Board of Directors from 1980 to 1985. For the KU Endowment Association he was a member of the Campaign Kansas National Council. He also has helped guide the School of Business as a member of its Board of Advisors.

He and his wife, Carolie Miller Hougland, assoc., are Williams Educational Fund and Chancellors Club members. In 1993 their $1.2 million gift to Campaign Kansas established the William M. and Carolie Miller Hougland Fund to benefit the Alumni Association, athletics department, School of Business and the Spencer Museum of Art.

Hougland’s sports honors include membership in the KU Sports Hall of Fame and 1977 Silver Anniversary All-American team of the Du Pont National Association of Basketball Coaches. The 1956 Olympic basketball team, which he led as captain, was elected to the Olympic Hall of Fame in 1988.

He joined the Air Force ROTC while at KU and served in the U.S. Air Force for two years after graduating. He then took a job with Phillips Petroleum Company and played on the Phillips 66 Oilers basketball team from 1954 to 1958. In 1962 he moved on to Rock Island Oil Company before beginning a 28-year career with Koch Industries.

The Houglands have five children, Nancy Hougland Simpson, d’74; Janis Hougland Hartzler, c’77; Diane Hougland Ruder, d’79; William C. Hougland, c’84; and Sam Hougland, c’87. They also have a granddaughter who is currently a KU student.

For Members Only

The October/November issue will be a keeper: If all goes well, the next Kansas Alumni will include essential inserts for members:

- The 1996 color calendar, a favorite for office walls and home refrigerators, will be mailed as part of the magazine to save postage costs. Negotiations with printers are underway, but rest assured that the calendar will include the traditional color photos of Mount Oread scenes along with other handy telephone numbers for campus and alumni leaders.

- The TV Guide to Kansas Basketball will be your vital reference for men’s and women’s basketball schedules and watering holes around the nation where you can cheer the Jayhawks in the company of KU friends. The Association is working with the athletics department to confirm schedules and with chapter leaders to check locations and dates for special events.

- The Jayhawk Collection Holiday insert will ease your shopping woes by offering lasting KU keepsakes to order for family members and friends.

If your annual membership is due for renewal in August or September, please don’t hesitate to send it in. Members on the rolls as of Oct. 1 will receive their October/November issue, the calendar and the other special items.
Alumni Events

AUGUST
17 Denver: KU Night at the Rockies
19 Chicago: KU Night at Ravinia
19 Boston: Whale Watch and Pub Crawl

SEPTEMBER
2 Lawrence: KU v. Cincinnati tailgate at the Adams Alumni Center
9 Dallas: KU v. North Texas Pep Rally
14 Lawrence: Douglas County Chapter Kick-off (as part of the KU v. Texas Christian tailgate at the Adams Alumni Center)
23 Lawrence: KU v. Houston tailgate at the Adams Alumni Center

OCTOBER
7 Boulder, Colo.: KU v. Colorado Pep Rally
9 Denver: Chapter meeting
10 Colorado Springs: Chapter meeting
13 Lawrence: Kansas Honors Program and Chapter Volunteer Conference
14 Lawrence: Kansas Honors Program and Chapter Volunteer Conference
14 Lawrence: Homecoming Picnic Under the Tent, KU v. Iowa State
21 Norman, Okla.: Bus Trip from Lawrence to KU v. Oklahoma

Chicago
Colleen Lawler, J'91, chapter leader

A Sunday afternoon cruise highlighting the Windy City's famous downtown architecture drew more than 30 Jayhawks June 25, according to chapter leader Colleen Lawler.

The tour, which chugged along the Chicago River through the middle of the city, was organized by Beth Foley, c'92, and attracted Jayhawks of a variety of ages.

"We had recent grads on up to sixtysomethings," Lawler says. "We had some folks who hadn't been to alumni events ever, but this caught their eye and they gave it a try.

"They have these cruises from April through October. A local architect leads them. He points out the major buildings of interest and talks about them."

Upon returning to shore, the flock hit Dick's Dock, a local waterfront establishment, for drinks and hors d'oeuvres.

"It was just a beautiful day and a fun group," Lawler says. "We feel like we brought in some new people to the fold by offering something out of the ordinary."

The cruise was the first of three Chicago chapter summer outings. Alumni also attended a White Sox baseball game July 31 and gathered at Ravinia in Highland Park Aug. 13 to picnic and enjoy the music of Harry Belafonte.

Administered by the Alumni Association, the Kansas Honors Program each year recognizes about 3,000 Kansas high school seniors in 38 regions. At a local event students who rank academically in the top 10 percent of their class receive special editions of The American Heritage Dictionary. To become involved with the program, call the Alumni Association, 913-864-4760.
Kansas City
Lewis Gregory, c'75, chapter leader

A sunny summer day, a chance to play the Kansas City area's newest golf course and an opportunity to raise scholarship money compelled 131 Jayhawks to lace up the spikes July 17.

The tournament at Leawood's Ironhorse Golf Course raised $1,200 for a National Merit scholarship fund established by the Association's Kansas City chapter.

Scott Smith, c'85, organized the event, which was open only to Alumni Association members and their guests and was attended by University representatives Jodi Breckenridge of the Alumni Association, Betsy Stephenson of the athletics department and Kent McCarthy of the School of Business. Kansas City chapter board president Lewis Gregory welcomed the duffers at a breakfast buffet before they teed off at 8 a.m.

The foursome of Kristopher Bruso, c'83; Chuck Henderson, Phil McAnany, c'85; and Jerry Maier, b'83; shot 60 to win by a stroke. Three groups were two back at 62.

"We were really low-key about this—we didn't even name it so people wouldn't feel like it was a big deal golfwise—but we still had some friendly and strong competition," Smith says. "We want to make this an annual event. In fact, we'll start the planning for next year soon."

The first eight teams received prizes, including Ironhorse pro shop gift certificates and Jayhawk merchandise donated by Prairie Graphics' Jon Hofer, c'89. Prizes also were awarded for the longest drive that stayed in the fairway, for closest to the pin and for longest putt made.

KU Days

Nearly 1,000 Jayhawks attended a dozen KU Days in communities across Kansas this summer.

Good will from the Hill was carried to Kansas' four corners—plus Joplin, Mo.—for the fourth year in a row by representatives from University administration, the Alumni Association, the Office of Admissions, the athletics department, the Endowment Association and the offices of Governmental Relations and University Relations.

The events, coordinated by the Alumni Association and a generous contingent of alumni volunteers, typically centered on summer picnic food and food for thought from Mount Oread as University officials visited Emporia, Salina, Manhattan, Garden City, Liberal, Dodge City, Hiawatha, Colby, Hays, Larned and Wichita along with Joplin.

The events not only served to bring together alumni, friends and prospective students but also introduced Chancellor Robert E. Hemenway to Kansas alumni. Within his first 15 days in office, he attended five KU Days in western Kansas (see Hilltopics, p. 10).

Los Angeles
Dean Brush, j'86, chapter leader

To send freshmen from the Los Angeles area off to the Hill in style, LA Jayhawks gathered July 15 at the Hermosa Beach home of Curtis Estes, j'91, for Kansas City-style barbeque and Kansas-style conversation.

This marks the third year Alumni Association chapters and the Office of Admissions have co-sponsored the Summer Sendoffs, which introduce incoming out-of-state freshmen to new classmates and Jayhawk alumni from their home areas.

The Los Angeles chapter was the first of five nationally to host Summer Sendoffs. In late July and early August, similar gatherings took place in: Chicago, coordinated by Charles Hansen, c'70; Denver, coordinated by chapter leader Tracey Biggers, j'92; Minneapolis, Minn., coordinated by Diane Dolginow, d'65; and Lincoln, Neb., coordinated by chapter leader Dave Polson, c'71.
DeNeen Brown, lover of words, graduated from the School of Journalism intending to be a copy editor. She landed a summer internship with the Washington Post that turned into a permanent job, and Brown—the youngest copy editor the Post had ever hired—thought she'd found her niche in the newspaper world.

Then one night everything changed.

Because she had a lot of energy and no life outside work, Brown went out on an assignment with the Post's night police reporter. It was 1988, the crack epidemic had begun and Washington, D.C.'s homicide rate was soaring. What Brown saw that night stunned her: a dead man, shot, lying on the sidewalk in a pool of blood, with an eerily calm group of people gathered around.

"I will never forget that scene," says Brown, j'86. "I was fascinated by this homicide epidemic. I thought it was really important to find out who these people getting murdered were. These were black men dying, and they still are."

Brown started writing night police stories. She soon became a full-time reporter for the Post, and in 1993 she earned a Pulitzer Prize nomination for a story about how young people in violent D.C. neighborhoods were planning their own funerals.

For Brown, a homicide story details a life, not just a death. As a night police reporter, she knocked on doors in crack neighborhoods at 3 a.m. to find family members to tell the story—however short—of the murder victims she saw. "I was just trying to make them human," she says. "There's a burning desire in me to help explain the violence and help people understand that these are men who are dying, not just numbers."

Growing up in Wichita as the daughter of airplane factory workers, Brown experienced little violence. But she did encounter racism that, she says, "felt like daggers stuck in me." As a fifth-grader bused across town from the black section to the white section, Brown attended a class for gifted children. One day she questioned the teacher by asking, "Why come?" instead of "How come?" and the class burst out laughing at her unorthodox grammar.

Brown silently vowed, They will never laugh at me again. I'm going to learn how to speak proper English. She spent the summer in the basement, reading the encyclopedia and the dictionary. At KU, she decided on a career as a copy editor partly because "I was very shy."

For several years as a general assignment reporter for the Post, Brown focuses on young people and the African-American middle class. This summer she began covering local schools. She shares a home with her husband, Rob Lee, b'86, with whom she married two years ago.

Brown feels she has found her place as a journalist.

"The real mission for me is to write a more complete picture of black people so they're not perceived as stereotypes," she says, "and so little children out there can have a better sense of who they are."

—Ellen Walterscheid

Walterscheid, j'85, c'85, is a free-lance writer who lives in Lenexa.
MARRIED
Blaine Hardesty, c'52, to Louise Luhrs, Feb. 18 in Boulder, Colo., where they live.

1954
Mary Mahoney, d'54, lives in Brighton, Mass. She's a professor of English at Merrimack College in North Andover, and wrote an essay for the recently published book, *It's a Print! Detective Fiction from Page to Screen.*

Robert Stephan, c'54, is counsel with the law firm of Stephan, Harris, Yost & Cunningham in Wichita, where he lives with his wife, Marilyn.

1956
P.J. "Jim" Adam, e'56, is chair and chief executive officer of Black and Veatch in Kansas City.

LaVerne Foss, c'56, is one of the first to be elected to the board of United Methodist Youthville, a not-for-profit childcare agency. He lives in Johnson.

Bruce Rogers, c'56, manages exhibits at the Kansas City Museum.

1957
Norman Arnold, b'57, and his wife, Lola, recently celebrated their 50th anniversary. They live in Mission, and Norman works as marketing manager for the Kansas City Star.

1958
Edmund Fording Jr., e'58, recently became president of Crompton & Knowles Colors in Charlotte, N.C.

Jerry Siler, g'58, teaches physical geology at Chester County High School in Henderson, Tenn.

1959
David Kohlman, e'59, g'60, is vice president and director of aeronautical engineering for Engineering Systems Inc. in Colorado Springs.

1960
Norb Garrett III, c'60, is senior director of international operations for Kroll Associates in New York City.

John Shideeler, e'60, g'62, retired last spring after 33 years with NASA. He lives in Yorktown, Va.

1961
Rochelle Beach Chronister, c'61, recently was appointed secretary of the Department of Social and Rehabilitation Services in Topeka.

Sidney Harrison, a'61, recently joined the sales staff at Stephens Real Estate. He lives in Lawrence.

Kenneth Rothrock, d'61, PhD'68, and his wife, Joan, own and manage Silver Spoon Antiques in Waterville, Ohio.

1962
Kathleen Barbott Botts, d'62, is director of education and community relations at Atchison Hospital in Atchison, where she and her husband, Jerry, make their home.

Rita Clifford, n'62, has been named interim dean of the KU School of Nursing. She lives in Leawood.

1963
Richard Dodder, c'63, d'66, g'67, PhD'69, a professor in the departments of sociology and statistics at Oklahoma State University, recently was named the outstanding college or university teacher in the state by the Oklahoma Foundation for Excellence. He and his wife, Geraldine Gunther Dodder, d'64, g'69, live in Stillwater.

Robert Eaton, e'63, is chair and chief executive officer of the Chrysler Corp. in Highland Park, Mich. He lives in Bloomfield Hills.

Alice Boyer Matuszek, PhD'63, lives in Stockton, Calif., where she's a professor of medicinal chemistry at the University of the Pacific. She's also president elect of the American Institute of the History of Pharmacy.

1964
John DiLoreto, c'64, is first vice president and investment officer at Dain Bosworth Inc. He lives in Bellevue, Wash.

Eugene Donaldson, e'64, retired in July from a career with Boeing. He and Mary Alice Hofen Donaldson, g'63, live in Mulvane.

Robert Kane, c'64, recently was appointed to the Oklahoma Turnpike Authority. He continues to practice law in Bartlesville with his father, Richard, c'39, his brother, Mark, c'75, and his brother-in-law, Pat Roark, e'64, a'67.

Pack St. Clair, d'64, is president and chief executive officer of Cobalt Boats in Neodesha.

1965
Darrel Cohoon, c'65, owns Darrel Cohoon & Associates, a consulting firm. He and Sharon Pfeiffer Cohoon, d'66, live in Huntington Beach, Calif.

Daniel Foss, c'65, g'69, practices medicine at the Hutchinson Clinic, and Patty Brill Foss, n'67, directs independent living at Wesley Towers in Hutchinson.

Nancy Kellogg Harper, d'65, g'74, chairs the education department at Bethany College in Lindsborg. She and her husband, Jerry, c'65, g'74, live in Lawrence.

1966
Gary Hunter, b'56, g'69, heads Rocky Mountain Entertainment in Denver. He lives in Golden.

Will Price III, c'67, is managing partner of KPMG Peat Marwick in Wichita.

1968
Jerry Decker, b'68, directs sales and is a senior vice president at Paramount Liquor in St. Louis, where he and his wife, Anne, make their home.

Cheryl Lunday, c'68, is minister of Faith United Presbyterian Church in Yates City, Ill.

Amanda Ross, e'68, is a corporate associate publisher for Family Journal Publications in Altamonte Springs, Fla. She and her husband, Larry, live in Longwood.

1969
Jerome Kootman, b'69, a partner in the Metuchen, N.J., firm of Israel, Goldenfarb & Kootman, recently was elected vice president of the New Jersey Society of Certified Public Accountants.

Diana Laskin Siegal, g'69, works for the Massachusetts Department of Public Health. She lives in Brighton and recently wrote an article, "Managing Menopause," for *Modern Maturity* magazine.

BORN TO:
Mike, c'69, g'71, and Linda DeMarais Wildgen, c'77, S'86, daughter, Anne Elizabeth, Feb. 24 in Lawrence, where she joins a brother, Christopher, 4, Mike's city manager of Lawrence, and Linda is a transition facilitator for USD 497.

1970
Jack Braun, g'70, recently became vice president for advancement at Tabor College in Hillsboro.

Bille Kirkland Douglass, f'70, owns Douglass Designs, an interior design firm in El Dorado, where she and her husband, Bill, make their home.

1971
David Anderson, j'71, received the National Cable Television Association's Vanguard Award for Public Relations last spring. He's vice president of public affairs for Cox Communications in Atlanta.

Julie Waite Dinmore, c'71, received a doctorate in counselor education last spring from the University of South Dakota. She teaches in the department of counseling and school psychology at the University of Nebraska in Kearney, where she and her husband, John, t'78, make their home.

Abdul Ghaffoor, g'71, is president and chief executive officer of Hybrids International in Olathe. He lives in Leawood.

Jo Ann Hrebek, c'71, teaches and does counseling for the Peninsula School District in Gig Harbor, Wash.

John Lubert, e'71, g'72, works on the technical staff of AT&T's Network Cable Systems in Omaha, Neb., where he and Paula Lanoy Lubert, 70, live.

Maureen "Twick" O'Malley Lynch, g'71, PhD'81, received the Governor's Arts Award last spring for her work in community theater development. She lives in Topeka.

Michael Welch, e'71, has been elected president of the AGC Kansas Contractors Association. He's president of BRB Contractors in Topeka.

MARRIED

1972
Robert Myers, d'72, 76, has been elected president of the Harvey County Bar Association. He owns a law firm in Newton.

Ronald Parker, c'72, j'72, wrote the screenplay for the TV movie, "The Possession of Michael D.," which was shown last spring on the Fox network. He owns Ronald Parker Productions in Los Angeles.

Kirk Underwood, c'72, g'75, moved recently from Kettering, Ohio, to Springfield, Va. He is an attorney adviser who handles labor and employment law for the U.S. Department of Justice in Washington, D.C.

1973
Shelley Bock, c'73, f'79, recently was elected vice president of the Douglas County Bar Association. He lives in Lawrence.

William Freyta, m'73, directs emergency medical services at Andalusia Hospital in Andalusia, Ala., where
George Detsios dishes up friendship

George's Cheese and Sausage Shop dispenses cheese and sausage, for sure. It also offers Hungarian specialties—beef goulash, chicken, stuffed red peppers—in a setting of mismatched tables and chairs, festooned flags and classical music wafting from the radio. But walk into the little Kansas City, Mo., restaurant and meet its proprietor, George Detsios, and you'll see what George's Cheese and Sausage Shop really provides: a sense of community.

"Where are you guys from?" sings out Detsios, b'58, in a voice tinged with the accent of his native Cyprus. Fresh from bidding goodbye in Hungarian to a customer, Detsios greets two musicians from Mississippi who have stepped into the shop this warm June day to ask for directions. At first uneasy, the men start to smile in Detsios' presence. An hour later, they wave like old friends.

Another day, another link.

For Detsios, bonding with people from different backgrounds is a way of life. When he was 8, he fled Cyprus with his family to avoid the Nazis. The family went to East Africa, where his father supervised the German and Italian prisoner-of-war camps in Kenya, then part of the British Empire.

After the war Detsios came to the United States on a Fulbright scholarship. His first stop was New York City. Shortly after he arrived, Eleanor Roosevelt invited him and four other Fulbright scholars to her Hyde Park, N.Y., home for tea. The young scholars told Roosevelt where they were from, where they were going and what they planned to study. Most told proudly of plans for Harvard or Yale or the University of California at Berkeley. Detsios said simply, "I am George Detsios from Cyprus, Greece, and I am going to the University of Kansas to study economics." The former first lady smiled at him and said, "You're the luckiest of the whole group. You are going to meet the farmer, the true American."

Once in Kansas, Detsios found the topography strange. "But the people were as open as Eleanor Roosevelt had predicted," he says.

In 1973 he opened his cheese and sausage shop in Kansas City's Crown Center. He moved to his present location near the Country Club Plaza in 1982. His mother, Elizabeth, helped him run the restaurant until ill health forced her into a nursing home last year.

The drive to engage people, to make them feel welcome and wanted, sends Detsios into his restaurant seven days a week, selling his home-cooked meals for $4.50 a plate.

"There's a lot of cross-table talk here—young, old, gay, straight, male, female. We have a lot of lonely people that come in here for that particular reason," he says with a quiet smile.

"We are not here to make a million dollars. Here we want to sell humanity."

—Ellen Walterscheid

Walterscheid, f'85, c'85, is a freelance writer who lives in Lenexa.

he's also a weekly columnist for the Times-Courier newspaper.

1975

Kirk Bradford, b'75, is president of Citizens State Bank in Marysville, where he and Anne Peterson Bradford, s'74, make their home.

Kenneth Butler, e'75, manages facilities for Selectron Technology in Charlotte, N.C. He and his wife, Patricia, live in Concord with their daughters, Katherine, 12, and Jennifer, 10.

Karen Hunt Exxon, d'75, g'82, PhD 90, lives in Topeka and is an associate professor of history and political science at Baker University in Baldwin. She also teaches a continuing education history course for KU.

Roger Morgenstern, c'75, is vice president of Converse Inc. He and Linda Soest Morgenstern, d'75, live in Lawrence.

Joseph Moore, c'83, U.S. Marine Corps captain, recently completed a six-month assignment off the coast near Bosnia-Herzegovina. He's stationed at Camp Lejeune, N.C.
Murguia monitors legislative wrangling

Janet Murguia is doing her best to answer a reporter's questions during a phone interview.

"Can you hold on one second?" says Murguia, ever polite. Soon she gets back on the line. The U.S. Supreme Court has just announced a decision that may affect affirmative action and minority set-aside programs. "There's a lot of stuff breaking on that morning," she explains. "This is a crazy time."

Life has been like this for Murguia, c'82, j'82, l'85, ever since she became special assistant to President Clinton for legislative affairs. In the White House and on Capitol Hill, she routinely spends 12- and 14-hour workdays tracking policy issues and advocating the president's positions.

A given day might find her following issues as diverse as telecommunications reform, health care, Superfund reform and trade. The 10-member legislative affairs staff covers at least 20 Congressional committees. "We have to keep the president aware not only of activities going on but how they affect his agenda," Murguia explains.

She came to Washington 10 years ago, fresh from law school. A fellow law graduate, Becky Benton Weber, l'85, invited Murguia to stay with her in Washington while she looked for a job. "It was a very scary time for me," Murguia recalls. "It was the first time I had left home, and I was the first one in my family to leave."

She gave herself two weeks to find a job—and she did. She landed on the staff of former U.S. Rep. Jim Slattery, D-Kan., handling legislative correspondence. With the help of Slattery, Murguia quickly moved up the ranks.

Now Murguia can recite a long list of memorable experiences. Among them: She watched the signing of the Brady Bill. She helped organize last December's Summit of the Americas in Miami. And she flew to Kansas on Air Force One during Clinton's health-care reform tour, where she participated in town hall meetings. "My folks got to meet the president. That was very exciting," she says.

Murguia's tightly knit family gives her strength. She grew up in the working-class Argentine neighborhood of Kansas City, Kan., the daughter of a Mexican immigrant. Of the seven Murguia children, four are KU graduates with law careers.

One of her greatest rewards, Murguia says, has been getting to know the Clintons. She describes them as "very special people. They're very talented, intelligent, caring. Seeing more of that side of them than most other people see is a special opportunity."

But her roots are firmly set. Murguia's office in the East Wing of the White House contains a prominent display of KU paraphernalia: a poster, a silver Jayhawk statuette, a "Rock Chalk Jayhawk" screen-saver on her computer. "You've got to remind people of who you are and where you come from," she says.

Janet Murguia, for one, knows who she is—even on the crazy days. "You can't let every big event get blown out of proportion," she muses. "It's just part of your job to be here when big things are happening."

—Ellen Walterscheid

Walterscheid, j'85, c'85, is a free-lance writer who lives in Lenexa.

Marlene Witt Thompson, b'83, works as a controller for Winning Ways in Shawnee Mission. She lives in Lee's Summit, Mo.

Richard "Rick" Worrell, c'83, is vice president of Larkin Associates, a consulting engineering firm in Kansas City. He and his wife, Susan, live in Overland Park.

David Keller, PhD’88, directs special education for the Kaskolokin School District in Bethel, Ala.

James Latimer, c’88, recently became an associate and vice president of the consulting engineering firm of Latimer, Sommers & Associates. He lives in Topeka.
Producer Vickers lives for ‘Tonight’

When Debbie Vickers was much too young to be awake past late-night news, she would sneak her mini TV under the covers. Johnny Carson would keep her giggling until all hours.

Now Vickers, c'76, is responsible for entertaining millions of pajama-clad viewers as executive producer of NBC's "The Tonight Show with Jay Leno." She manages a staff of 50 to ensure that each show runs smoothly—and that ratings stay high. "It's like your report card at the end of the week," she says.

Vickers, 41, scores high as a workaholic. "It's a very dysfunctional personality that flourishes in this business," she admits. "We're all from these families where you're an obsessive, perfectionist worker." Leno fits the stereotype too, she says, plotting with writers past midnight, then showing up at the office at least by 8:30 a.m.

Her break with NBC came after a break in her leg. After completing her general studies degree, she'd gone to Colorado to work and work out on the slopes. She took a tumble and so did her plans when her doctor advised that the broken bone needed at least two years of ski-free healing time. She moved to California to hang out with her brother, Mike, c'78. Her father, who operated the family's Vickers Oil business in Wichita, connected her with an acquaintance at NBC.

Vickers started as a page—giving tours, seating studio audiences—and won a job with "Tomorrow," hosted by Tom Snyder. In the early 1980s she moved to Carson's "Tonight Show" as a talent coordinator (She was hired by Peter Lassally, now executive producer of "The Late Show" with David Letterman). She was promoted to executive producer of Leno's show in November 1994.

Vickers sells spontaneity. "You have to do remotes, have drop-ins and walk-ons," she says. She has been accused of copying Letterman. "My answer to that is that Johnny did the show like nobody else will do it again," she says. "Once he left we had to take the time to redefine this hour to fit Jay. And in this age of MTV I don’t know if we’re emulating Dave or just admitting that people don’t have long attention spans."

A disappointment for the show was the resignation of Branford Marsalis: Guitarist Kevin Eubanks now leads the band. "Branford was artistically frustrated," Vickers says. "This is a real commercial thing, and there were decisions made in the interest of being commercial that made his hair stand up on end. I don't think TV is the place for a real artist."

"I don't know if I should admit that."

Frank and spunky, Vickers doesn't shy from risk when the cameras roll. "I'm not a proponent of cutting anything," she says. "If people say, 'Why didn't you cut that?' I answer, 'I wouldn't have thought of it. It was fun.'"

If it isn’t fun, she figures, viewers won’t stay up past bedtime.

—Jerry Niebaum Clark
tive with Reilly and Sons Insurance and Real Estate.

Susan Beck Richart, b'89, is a presentation writer for the U.S. District Court in Kansas City. She and her husband, Scott, live in Liberty, Mo.

Sharon Stolte, b'89, practices law with Perry Hamill & Filmore in Overland Park. She and her husband, Tommy Howell, live in Shawnee Mission.

The Alumni Association invites all members and their families and friends to party outside the Adams Alumni Center before home games. Join us Sept. 2, when the Jayhawks face the University of Cincinnati. The fun will start at 10 a.m., and the feast will include hamburgers, hot dogs, brats, and other tailgate favorites at reasonable prices.

Children can learn the Rock Chalk chant while you listen to live music and toast the season. Your Alumni Association membership card will admit you and your guests to tailgates throughout the football season.

Bring your Jayhawk spirit and your appetite!

1995

1990s

Robert Nye, c'95, 23, May 14 in Lawrence. He was vice president of Theta Chi Fraternity and is survived by his parents, a sister and his grandparents.

The University Community

Clyde Babb, d'48, April 25 in Lawrence, where he was an assistant to the dean of continuing education for many years. A sister survives.

James Terry, g'77, 79, March 27 in Lawrence, where he had been assistant director of the KU Computer Center. He is survived by his wife, Wilma, assoc.; two daughters; two sisters; and six grandchildren.
Nationwide 65 percent of anesthetic services are provided by nurse anesthetists: In rural Kansas the percentage climbs to 85, and hospitals in remote areas struggle to find enough help. They suffer a 34 percent deficit in anesthesia services, says Carol Elliot, '72, '82, chair of nurse anesthesia at the Medical Center.

A new KU program will begin to fill the void. Elliot and colleagues in June launched a satellite training program in Pittsburg. Four students this summer attended class via compressed video at the Mount Carmel Medical Center, where they also will receive their clinical instruction. Tim Powell, '78, M.S., '85, director of anesthesia at Mount Carmel, is satellite program director.

Elliot says the Pittsburg program is ideal for established community nurses. "It is very difficult for nurses in rural areas to leave that area and come to the mecca, as we call it, for 2 1/2 years," Elliot says. "They simply cannot do it."

The cost of duplicating facilities and faculty in the past made a satellite site impossible, she says. "Then I was introduced to interactive compressed video, and I thought, 'Aha, this is a way to move education into the 21st century.'"

Elliot in 1993 received a $430,000 grant from the U.S. Department of Health and Human Services to launch the program. She plans eventually to open satellite training sites in Garden City and Hays.

**"UNPAINTED TO THE LAST" EVENTS AND TOUR SCHEDULE**

**Aug. 19-Oct. 8:** Exhibit at the Spencer Museum of Art

**Aug. 21-Nov. 30:** "Images of Moby-Dick," exhibit of illustrated editions of Melville's novel in Special Collections of the Spencer Research Library

**Aug. 31:** Gallery talk by Elizabeth Schultz, professor of English who organized the exhibit

**Nov. 4-Dec. 24:** "Unpainted to the Last" on display at University of Michigan Museum of Art

**Jan. 12-March 3:** "Unpainted to the Last" on display at Northwestern University's Block Gallery

Log cabins in Montana and historic Kansas City homes have something in common: Both were designed by award-winning KU architects who were honored this spring as distinguished alumni. Cynthia Frewen-Wuellner and Becky Cotton Zahner, both advisory board members, shared the honors.

They now work in Kansas City, Mo., where Frewen-Wuellner is founder, president and owner of Frewen Architects Inc., and Zahner is president and majority shareholder of Mackey Mitchell Zahner Associates.

Frewen-Wuellner, '77, started her career designing log cabins and similar structures in the Montana mountains and later worked for Burns & McDonnell Engineers-Architects-Consultants in Kansas City. She formed Frewen Architects in 1982 and was an adjunct professor at KU from 1982 to 1984.

Zahner, '80, '81, got her start as a staff architect for the Historic Kansas City Foundation, where she assisted in the purchase, renovation and resale of homes in central-city neighborhoods; she continues as a volunteer with HKCF. She joined Mackey Mitchell Associates in 1985 and in 1993 became president.

Following the resignation June 1 of Dean L. Joseph Bauman, the school named as interim dean Thomas W. Sarowski, distinguished lecturer and executive in residence in information systems.

Sarowski, who holds a bachelor's degree in civil engineering from the Detroit Institute of Technology and a master's in industrial administration from Purdue University, teaches graduate-level management information systems.

Before joining the faculty in 1981, Sarowski served 26 years for Arthur Andersen & Co., including 10 as a managing partner of Andersen Consulting in Kansas City, Mo.

"The past four years have given me an inside perspective of the dean's role and a
view of the school through the eyes of the faculty," Sarowski says. "I also can provide a degree of continuity that will minimize disruption in implementing the new MBA programs and other current initiatives."

Dean Karen Symms Gallagher hit the highway this summer. "I want to learn firsthand from superintendents what is going on in education in their communities," she says. She plans to use her new insights to shape education of future teachers.

Gallagher visited Emporia State and Pittsburg State universities and met with school superintendents from Frontenac, Pittsburg, Parsons, Independence, Neodesha and Winfield. She also visited Crawford County's Southeast Kansas Education Service Center.

U.S. News and World Report ranked KU's graduate program in education 17th nationally for 1995; the graduate program in special education ranked first.

With her June 14 visit to Pittsburg State, Gallagher met her goal of visiting all Kansas Board of Regents campuses as well as Washburn University in Topeka during her first year at KU. At PSU she discussed a plan for a joint doctoral program in educational administration to be offered by KU and PSU for superintendents in southeast Kansas.

The school has given three alumni Distinguished Engineering Service Awards.

Adam was recognized for his contributions to the electric-power industry and his leadership of one of the country's largest engineering firms. Daily was honored for his leadership in the design of electric-power units and waste-treatment systems that protect the environment. Eaton was lauded for his leadership in the auto industry—and his longtime passion for cars.

After a year as interim director of choral activities Simon Carrington has accepted the post permanently.

A 25-year veteran and founding member of The King's Singers, Carrington toured worldwide to give more than 3,000 recitals during his performance career. He also was music director and business administrator for the sextet.

Carrington says that although he hadn't planned to stay for more than a year, he was impressed by the quality of KU faculty and students and by the warm welcome he and his wife, Hilary, received in Lawrence. They moved last year from their home in Wiltshire, England.

Steve Anderson, chair of music and dance, says Carrington brings an entrepreneurial spirit to the school. "Entrepreneurship in the arts is something that we don't talk enough about," he says. "If you're doing serious art music and it's not part of popular culture, how do you carve out a niche for yourself?"

Carrington uses his own career as an example. Anderson says, noting that audiences 25 years ago weren't beating down doors to hear six men sing classical works: "He and his colleagues created a market for themselves—and thrived. I'm interested in that mentality, that creative thinking and enthusiasm being part of my faculty."

Shari Baron Sokol still giggles when she recalls the broken English of her maternal and paternal grandparents, who were first-generation American immigrants from Poland and Lithuania. Around the family home in Providence,

INFLUENTIAL VOICES: Sokol's interest in language acquisition was inspired partly by her immigrant grandparents, who learned English as adults. Sokol is one of six graduate students to win Self Fellowships, created by Madison, e'43, and Lila Selk, '43, Hinsdale, Ill.

R.I., her elders would say things such as "Open the light."

"I always thought that as you grew older you started speaking English with a funny accent," Sokol says. "I thought everyone's grandparents came from somewhere else. It was quite a revelation in my early school years when I met the grandparents of friends and they spoke English without an accent."

Once she grasped why her grandparents spoke differently, Sokol became fascinated with foreign language and, ultimately, the way language works. She learned French and Spanish and studied linguistics as an undergraduate at Wesleyan University, Middletown, Conn. She earned her master's in teaching from Brown University, Providence. R.I. Now, as one of six graduate students to win prestigious Self Fellowships beginning in 1995-96, she enters KU's nationally renowned doctoral program in speech-language pathology.

Sokol has taught English as a second language and has tutored illiterate Americans. "Although the success of most of my
students gratified me, I was drawn to the problems of those few who were struggling," she writes in her Self Fellowship application. "Why didn't they learn? What could I do to help? Not only was I interested in how people learn language, but also in what happens when things 'go wrong.'" Ultimately she wants to research language acquisition in children.

The death of William Allen White in 1943 stirred the faculty of the 35-year-old journalism department to campaign for their own school. Their wish was granted by the Regents in 1944, and the school opened in "The Shack" in 1945. Students gathered in the smelly former chemistry building until 1952.

The school will host a 50th anniversary alumni reunion Oct. 20-21. Festivities will begin Friday with dinner at the Kansas Union, followed by a party at the Adams Alumni Center. During an open house in Stauffer-Flint Hall Saturday morning, faculty and students will thank major donors. Afterward alumni will head to the Union for seminars to discuss their professional experiences and their visions for the school's future. "We're going to ask them to advise us on how they think the school should develop and grow over the next 50 years," says Dean Mike Kautsch.

Past Kansan editors are planning a special gathering, he says. "We expect other alumni with experiences in common to form their own groups and plan activities."

The anniversary celebration started last February with a preview broadcast from the school's TV station, Channel 14, during William Allen White Day. It will end next spring with a ceremony to honor 1946 grads during Commencement.

For details on the reunion Oct. 20-21, contact the school at 913-864-4755.

Students in late spring awarded the 1995 Frederick J. Moreau Award for stellar counseling and advising to Martin B. Dickinson Jr., Schroeder distinguished professor. A faculty member since 1967 and a former dean, Dickinson teaches taxation and estate planning.

The Moreau Award was established by Jean Moreau in 1987 in memory of her late husband, who was dean from 1937 to 1957.

School stats show that most students are Kansans. Of 180 1-15 last fall, 78 percent were Kansas residents and 58 percent had earned college degrees in-state.

The average age was 25, with a range from 20 to 53. Women made up 34 percent of the class, and 14 percent were members of minority ethnic groups.

The average undergraduate grade point average was 3.40, and the average score on the Law School Admissions Test was 157.

After seven years as dean of KU's largest academic unit, Jim Muyskens announced in mid-July that he had accepted a new position as senior vice chancellor for academic affairs in the University System of Georgia. Sally Frost-Mason, associate dean of liberal arts and sciences, will serve as acting dean.

"This job is a magnet: I couldn't say no," says Muyskens. "I will be a spokesman for higher education on a state level. I'll be free to think about the larger issues in higher education today. Even so, there's a part of me that still wants to be here. I love this place. I'll be a Jayhawk forever."

Muyskens, who holds degrees from Central College of Iowa, Princeton Theological Seminary and the University of Michigan, came to Kansas in 1988 after teaching and working as an administrator for 17 years at Hunter College of the City University of New York. When he became dean of KU's College, home to half the University's students, budget rescissions and rapid enrollment leaps had combined to plunge liberal arts and sciences $1.3 million into the red.

With careful management of scarce resources, savings from Program Review and stabilizing of enrollment, Muyskens pulled the College back into the black. "Ultimately," he says, "we've managed...to increase the number of faculty teaching undergraduates in all course levels."

Muyskens, 52, will be one of three senior administrators who report to the chancellor of the Georgia system. He'll work with educators, legislators and government officials to raise academic standards in the state. On the Hill Muyskens oversaw 16,000 students and 600 faculty while administering a $40 million budget.

In September he'll become responsible for the academic needs of 204,000 students and 8,000 faculty at 34 schools across Georgia.

"When you're in a position like this, you often have to react to things," he says. "In the past couple of years I've felt that..."
higher education was in a crisis because the public really isn"t seeing the benefits."

He cites as an example the attitude of the 1995 Kansas Legislature that educational funding was a drain on resources, not an investment in the state's future. University officials are struggling to absorb a $3 million budget shortfall resulting from cuts in operating expenses from the state and in operating funds that traditionally have accompanied federal grants and contracts.

Before the cuts, he says, "it really felt as if the wind was in our sails and moving. The Legislature's cut made that wind go away. You felt like you were sitting in the water. So it's hard to feel there is momentum, although I feel it will come back. The irony is, the cut is not huge, but it's just big enough to cast a pall over the place."

The American Academy of Nursing on Nov. 10 will induct Roma Lee Taunton, PhD '84, professor of nursing. She is among 84 nurses invited into the 1,100-member academy this year.

A faculty member since 1983, Taunton researches job satisfaction and nursing care. She recently received a $900,000 grant from the National Institutes of Health for a study in which she found a correlation between nurse absenteeism and hospital-acquired infections among patients. "Generally absenteeism is viewed as a management problem for the hospital, but it's not taken seriously as affecting what happens to patients," Taunton says. With a proven link between nurse attendance and patient care, she says, employee management problems will get more attention.

Even as the nation's population goes gray, too little research is being done about the implications of aging, says Jack Fincham, dean of pharmacy. The Marion Merrell Dow Foundation of Kansas City, Mo., is helping with $500,000 to establish a KU professorship in the pharmaceutical aspects of aging.

"This is a fantastic opportunity to attract an internationally renowned scholar," Fincham says.

The funds, combined with previous donations, will establish the Takeru and Aya Higuchi Professorship through the department of pharmaceutical chemistry. Takeru Higuchi was Regents distinguished professor of pharmaceutical chemistry and chemistry before his death in 1987. University officials have been raising funds for the professorship since then; other gifts from individuals and corporations exceed $600,000.

Many Americans in crises, Michael Yellow Bird says, turn to churches or synagogues. A troubled American Indian, however, may seek solace at a sacred mountain retreat.

Knowledge of this and other differences can help social workers deal more successfully with First Nations people, says Yellow Bird, assistant professor of social welfare and a member of the Sahnish Nation.

"Social work practice with First Nations people is heavily steeped in spirituality," he says. "Natural resources—clean air and water, good soil—have always been important in the spiritual lives of indigenous peoples. There is a fundamental sense that we are part of a universal web of life. You can't practice social work among First Nations peoples without understanding those kinds of ideas."

To promote understanding, Yellow Bird organized the First Nations Social Work Scholars' Conference, which brought a dozen Native American scholars to campus in June. Yellow Bird plans to convert the papers presented into chapters for a textbook for professionals.

During the conference Yellow Bird was voted president of the Association of American Indian Social Work Educators.

KANSAS ALUMNI MAGAZINE 53
Once upon a time, freshmen had to wear special thinking caps. Beanies functioned not to shelter matriculants' melons but to protect posteriors from upperclassmen's paddles.

The odd habit apparently began around the turn of the century in response to the hazing of freshmen, which had grown increasingly violent in the "class scraps" of the 1890s. By ordering the wearing of caps—which identified academic schools by colored buttons or ribbons—student leaders hoped to diminish hazing and to promote school and class spirit.

The 1905 Student Council decreed that freshmen must tip their caps each time they passed the University flag, faculty members and seniors, who could be recognized by the arm bands they wore. Violators were reprimanded by upperclassmen, who used leather or wooden paddles to wield punishments in a gauntlet or so-called "paddling mill."

Upperclassmen occasionally tried other methods of enforcement with varying success. In one era, freshmen who dared to go capless at football games were tossed into the air from a large canvas blanket. Other rebels lost their votes in elections or saw their names published in the University Daily Kansan.

For 40 years the headgear prompted annual debate and division; some years, caps were scrapped. Kansan articles report heated arguments over the public paddlings by men of the Student Council, School of Law, K Club and/or Sachem.

The 1940s finally spoiled the tradition. According to a September 1944 Kansas City Star story, World War II vets tossed the caps. It's difficult to imagine a battle-tested veteran submitting to a paddling, let alone agreeing with a November 1919 Oread Magazine article that described beanies "not as a mark of degradation but as a distinctive badge which links together the new men of the University."

—Bill Woodard
EXCLUSIVE TO KU ALUMNI ASSOCIATION MEMBERS: THE JAYHAWK FOCUS & HOOPS NEWSLETTERS!

All the news you want about KU football & basketball

Delivered right to your fax machine after the games.

Pre-game news: one issue a week during August, two issues a week beginning Aug. 31.

Coverage continues through the end of basketball post-season play–at least 54 issues.

News, features and analysis by The Kansas City Star.

A percentage of the proceeds is contributed to the Alumni Association.

Coverage includes game stories, player profiles, statistics, photos, coaches' quotes, trivia and previews of the next game.

YES, I WANT TO SIGN UP!
