KU prepares a campaign to put heavy drinking on the rocks
Welcome Back to Jayhawk Country

View, location and setting! Excellent floor plan that will accommodate retirees as well as a large family. Quality construction with attention to detail! Located in the Masters at Alvamar.

Barbara Hodgson, John Novotny, Mrs. Monte C. Johnson (Kay)

An enormous 2 + acre golf course lot is the setting for this beautiful custom home. Over 7,100 sq. ft. of quality comfort in Alvamar's Prestwick neighborhood.

Mike McGrew

Elegance, grace, and warmth exudes from this distinctive 9,000 sq. ft. brick home situated on 2 lots. Perfect for entertaining as well as daily life. Features include swimming pool and pool-house. Located in the Masters at Alvamar.

60 HAIL TO OLD KU
Happy 100th birthday, Stauffer-Flint
I met my future husband Oct. 1, 1977, over beers in a Mass. Street bar. When I turned 18 three weeks later, the dozen long-stemmed red roses in a white box waiting for me at the Corbin Hall front desk seemed a far more momentous milestone than my legal right to drink beer. Like most freshmen during KU’s Country Club era, I considered drinking beer an inalienable rite, and luckily my driver’s license hindered me for only nine weeks.

But since 1985, when the drinking age rose to 21, undergraduates have had to contend with a three-year disparity between their legal right and the rites of socializing to which they stubbornly cling. Nevertheless, they ignore the inherent risks and continue to drink, sometimes to excess, according to a fall 1998 survey. It seems mere statutes can’t mar tradition.

The University, however, hopes to succeed where laws have failed. In our cover story, Chris Lazzarino reports on a new campus program to encourage moderation. Though studies of drinking habits and efforts to change student behavior are hotly debated, administrators are determined that their campaign, like those that over time have caused many Americans to think twice before they drink and drive, will make students think twice before they drink too much.

The challenge for alumni and parents, says Provost David Shulenburger, is to echo the message, remembering that the climate and the laws are different from our days on campus. Instead of recalling only the parties of yore, perhaps we should also remember the friends whose graduations were postponed or forgotten, whose health slipped, or whose lives ended because of booze. Today such losses make the news, confirming a frightening trend. Back then the headlines were fewer, but the losses were just as great.

Young adults never suffer hypocrisy gladly, so the issue of drinking is an awkward dilemma for many parents. But if we remind ourselves of those who paid dearly for poor choices, perhaps it will be easier to grimace and say, as my father so often chided his quarrelsome daughter, “Do as I say, not as I do.” Thankfully, I listened more often than not, and I hope and pray my children will do the same.

Student drinking was the subject of my first cover story for Kansas Alumni, published in 1985, just as the law was changing. Throughout my years here I have been blessed to share the masthead with a succession of creative craftsmen with whom it has been a joy to make magazines and mischief. With this issue we mark two changes in our ranks.

Megan Maciejowski, ’98, in January became our new staff writer. She brings keen writing talent and KU sensibilities—and the conviction, long held here, that the quality of headlines is directly proportional to the amount of chocolate consumed by the staff.

Megan succeeds Mark Luce, ’92, g’98, who left in December to make his way as a free-lance writer. Since 1996 his features, including profiles of the debate team, alumni novelist Daniel Woodrell, ’80, and alumna photographer Terry Hoyt Evans, f’68, have enlivened our pages. Perhaps his most amazing feat was convincing me to publish a cover story about William Burroughs. He also gets credit for our regular book-review page, Oread Reader. We hope to review a Mark Luce title someday.

For nine years the magazine has owed its elegance to Christine Mercer Kraft, art director and arbiter of visual taste for thousands of other Alumni Association publications. She leaves us this month to become an advertising specialist for Sprint Inc.

We are grateful to Christine for her abundant grace and talent. She jumped through corporate hoops to convey the Association’s message in countless ways. She soothed cranky writers and editors, treating their words with utmost care. She could write a mean headline.

She weathered the stormy deadlines—and the real storms that invariably struck on the days or nights we headed down the highway to watch the magazine run on the press. Whether the roads were wet, snow-packed or bone-dry, she quietly suffered through my driving.

Through the long hours at the printing plant, she never lost her edge. She could discern even the slightest variations in color as the pages rolled off the press. She could convince a pressman to keep working, keep tweaking, until the color was true.

She taught me to see the colors, too. And so much more...
Both Frasers memorable

Although I admit that Fraser Hall is not the most attractive building on campus (I think Wescoe Hall, despite the great name that it bears, is much worse), I disagree with Ted Uitchen’s call [Lift the Chorus, issue No. 1] to ban photographs of Fraser Hall from the annual Alumni Association calendar.

The original Fraser Hall was a grand building and the current Fraser is nothing in compare, but the Fraser Hall that stands today brings nothing to my mind but the wonderful years I spent at KU.

As a resident of Sellards Scholarship Hall, I climbed the endless flight of stairs behind Fraser Hall—the stairs that climb the Hill beside Battenfeld Scholarship Hall—every day on my way to class. As I trudged my way up those concrete slabs, my goal was to reach the back doors of Fraser with breath still in my lungs. When I looked out the windows of Sellards, my eyes often looked up to the flags flying atop Fraser. What a beautiful picture the KU flag—especially the one that flew on game days—made against the blue Kansas sky.

To me, Fraser Hall was an entryway to my two worlds at KU—to campus as I headed to classes each day or to my job at the University Daily Kansan, and to my home, the scholarship halls along Alumni Place and Lilac Lane in what we then called “Mr. Budig’s Neighborhood.”

Fraser’s lawn is where the guys from Pearson Scholarship Hall played Ultimate Frisbee, where I said quick hellos to hallmates and friends on the way to and from classes, the place where I brushed my teeth when a water main break left the halls along Alumni Place without water for an evening. Fraser was the reference point I used in describing the route to Sellards to classmates who had no clue that the scholarship halls even existed. And the parking lot behind Fraser Hall is where my parents, grandparents, aunt and uncle gathered the day I graduated.

Today, as I drive by Lawrence on the Kansas Turnpike on the way from my apartment near Des Moines to my hometown of Lyndon, my eyes eagerly scan the landscape for Fraser Hall and its flags.
And when I see Fraser perched high atop Lawrence, a smile comes across my face and happy times flood my memory as I remember the four life-changing years I spent living down the Hill from Fraser Hall.

So please don’t exclude photographs of Fraser Hall from the calendar. Although not as majestic and grand as the hall that first bore the name Fraser, today’s Fraser Hall contains memories for the new generations of Jayhawks. Nothing is more pleasing, or reminds me more of my former home away from home, than flipping through the calendar and seeing the flags flying high above Fraser Hall.

An idea: If Mr. Utchen would prefer to see the old Fraser Hall, why not produce a calendar of KU using photographs from University Archives? Show those of us whose memories of KU include exhaust-spewing buses, the renovation of the Kansas Union, skateboarders and inline skaters, Wescoe Beach and the burning of Hoch Auditorium what the University looked like even before our parents were born.

Allison Lippert, '94
Clive, Iowa

A decade ago, when our calendar chronicled the academic year, the 1988-89 edition featured sepia-toned photos of early campus scenes, including the original Fraser and Blake halls and an early May Fete. We’d grown fond of historical images during our daily work in the Adams Alumni Center, whose walls are lined with samples from University Archives. At the time, members told us they preferred a more current colorful landscape in their calendars, but perhaps we’re due another dose of nostalgia. The choices from archives are plentiful.

—the Editor

On the road again

In issue No. 1, we included an item in Jayhawk Walk about a geography doctoral student who has a stated goal of driving through every county in the country. The article concluded with: “Their child is due in January... and the baby will probably halt his road rage—at least for a while.” Or perhaps not.

—the Editor

Thanks for sending me a copy of the Alumni magazine with the article you wrote about my county collection. My family and I all loved it.

Our daughter was born last week, and seems most content in her car seat. Life is good.

Dave Schulz, '97

Historic headquarters

Strong Hall is imposing, partly for its sheer size and partly for what it represents—enrollment, transcript printouts, Math 101. But if the significance of a storied old building can be measured by what goes on there—by the people who have lived and worked there—then Strong Hall surely deserves some respect.

The National Register of Historic Places agrees. Strong Hall has become the fourth KU landmark to join the prestigious list of historic treasures, along with Lippincott, Spooner and Dyche. The classical revival building, home to KU chancellors since its completion in 1923, was named to the list Sept. 18 based on its fulfillment of two criteria: historically significant people had worked there and the building has a unique architectural style.

In more than 75 years, Strong Hall has maintained its structural integrity and still stands out as the only terra cotta building in the midst of the limestone-dominated campus. What really stands out, however, is the noteworthy leadership of men like Frank Strong, Deane Malott and Gene Budig, who changed the University through the years from their offices in Strong Hall.

As the award attests, Strong Hall is formidable in history as well as heft.

Sock it to Me Baby

This '60s theme party was about pop (both art and soda), and the only pot to be found was of the fondue variety. But it was still fairly radical, considering the Jan. 23 happening happened in the Spencer Museum of Art's marble-floored central court. The shindig celebrated the museum's exhibition, "Decade of Transformation: American Art of the 1960s," which runs through March 21.

Partygoers tuned in to modern art, including works by Andy Warhol, Roy Lichtenstein and Robert Rauschenberg, and they turned up in mod fashions that spanned the decade. Judges gave prizes for the grooviest garb, which included pillbox hats, fringed vests and love beads.

But it seems one fad is still too far out: There was nary a Nehru jacket in sight.

Hearth is where their home is

Talk about burning passion. Scott and Jean Dold's marriage may pack some heat, but the real flames of fancy in their home are flying from their new fireplace. The hallowed hearth, sculpted by Lawrence artist John Swift, c'83, is adorned with Jayhawks and sunflowers, footballs and basketballs—even Allen Field House—all carved into 300 pounds of Kansas limestone. While the Dolds (Scott, c'83; Jean, c'90) are avid collectors of KU memorabilia, the fireplace is more than just another relic for their assemblage of artifacts.

"The fireplace is the culmination of our collection," says Scott, who claims to have 4,000 to 5,000 pieces of Jayhawk stuff, "because it represents a big part of our history together. My wife and I became a couple at Allen Field House. So we hold KU pretty close to our hearts."

Anyone with an inflamed interest in University lore will appreciate the lustrous limestone handiwork literally steeped in traditional symbols, including a bulldog (an early football mascot); Jayhawks from the first in 1912 to the current bird, circa 1946; the field house; and the "Beware of the Phog" banner.

Has Dold taken any heat for his capacious collection?

"Some people have rolled their eyes when they first hear about it and been sympathetic towards my wife, thinking I'm the lunatic," Dold says. "But when they see everything, it's so unique that they have to appreciate it."
Grade-A pampering

We remember when a midnight Joe's run—or a midnight run around the block—were the stress busters of choice for finals-frantic undergraduates. We're showing our age.

Thanks to the Association's new student membership program, more than 100 harried Hawks took a break from making their grades at the first finals week spaghetti feed Dec. 10 at the Adams Alumni Center. Students carbo-loaded at the pasta bar, got plenty of veggies at the salad bar, and were even treated to such delicacies as free neck massages from two professional massage therapists, "Friends" on a big-screen TV and homemade stress balls (balloons stuffed with flour).

"It wasn't a party; it was kind of like a little study break," says Jennifer Mueller, the Association's student programs coordinator. "They got a nice dinner and relaxed with their friends. They just vegged out for a few hours.”

Student memberships are only $15 for a year and include these spaghetti breaks during fall and spring finals. Mueller says more than a third of the inaugural student group attended the first feed in the Adams Alumni Center.

Which bodes well for final-exam performance, because it wouldn't be smart to miss a meal served by The Learned Club.

War and remembrance

When Claudine Scott Lingelbach, b'44, joined the service, her ambition was "to be more than just a pinup girl." The Lawrence resident has succeeded in more ways than she could have imagined, and now her story is told in NBC news anchor Tom Brokaw's best-selling book, The Greatest Generation.

Lingelbach was studying in Watson Library when she heard the news that Pearl Harbor had been bombed. Inspired by a poster that encouraged young women to join the military, she enlisted in the WAVES, the Navy's female auxiliary, and worked as a courier of classified information between the War Department and the White House. She even attended the D-Day press conference in the Oval Office. At the time, Lingelbach says, the magnitude of her work was lost on her.

It wasn't until she saw Brokaw on a talk show explaining his interest in World War II that Lingelbach realized her story might be worth telling. She wrote to him and soon began a series of interviews with one of his assistants. She spoke of marrying her college sweetheart, Dale Lingelbach, b'44, and then losing him unexpectedly in 1967; of teaching high school and selling real estate to support her family; and of her devotion to service, whether it be to her university, community or country.

"The outpouring of love and affection this book has inspired has been overwhelming and humbling," Lingelbach says. "I get call after call from people who know me who have read it. I'm sure this is happening all over the country, and I think it's wonderful. It opens up the lines of communication for people to share their life stories with their families."

Heard by the Bird

During his Nov. 10 appearance on Charlie Rose's PBS interview show, Leonard Slatkin, music director of the National Symphony Orchestra at the Kennedy Center in Washington, D.C., cited KU's Lied Center as one of the country's "brilliant" halls. After telling Rose that his personal favorites were halls in Germany, Switzerland, New York and Boston, Slatkin quickly added that big-name American halls often are respected more for reputation than actual acoustic performance.

"One of the great things in this country," Slatkin said, "is you can go to smaller communities, places like Champagne-Urbana. You can go to Tempe, Arizona. Lawrence, Kansas. Manhattan, Kansas. And they've built wonderful halls, absolutely brilliant to play in."

And absolutely brilliant to listen in.

Scholars worldwide have turned to Sandy Mason and the Spencer Library; after 42 years, she will retire

Alexandra Mason's journey from obscure librarian to campus legend began in 1957 when she saw an ad in The London Times for the position of librarian of special collections at the University of Kansas. At the time, she was working in Chicago compiling information for a children's encyclopedia. The ad, she remembers, described the library as a place that had been dormant for some time and was about to experience an awakening.

"I just thought that sounded so attractive," Mason recalls, "an awakening."

The awakening has continued over 42 years, during which Mason has tended the University's increasingly vibrant and varied special collections. She will leave them behind when she retires June 30.

"I decided that I needed to prepare for the future for the sake of the library so that it can carry forward as painlessly as possible," Mason says. Mason's thoughtful approach to her own retirement is not a surprise to anyone who knows her well.

"Sandy has an intense, selfless loyalty to this institution, and to the profession itself," says Bill Mitchell, the assistant special collections librarian who started working at special collections the same day as Mason.

Indeed, Mason has demonstrated her loyalty through a lifetime in libraries. She graduated from Mount Holyoke College with a degree in Greek and then earned her master's in library science from Carnegie Mellon University. From there she moved to Chicago, then to Lawrence in 1957. Since then her responsibilities have included developing different special collections for the library, making booksellers aware of the library's presence, and working with faculty to ensure the Spencer meets their needs.

Mason's method of finding strengths in the collections and building upon them has earned her an international reputation. While the approach in most fields is to find strengths and weaknesses, then fix what's broken, she says, in research libraries it is imperative to continue to
build on strengths.
“No library in the world can have everything,” Mason says. “That’s why it’s important to develop specialties and stick with them.”

In her long tenure at the University, Mason’s specialties have included nationally and internationally renowned collections in European, Central and South American travel; natural history; political history of Europe in the 16th to 18th centuries; and Irish history, among others.

The collections, however, may ultimately be just small pieces of Mason’s tangible legacy. Mitchell says the most concrete proof of her impact is the building itself.

“Spencer Research Library was built because of two strong women with high standards,” Mitchell says. “Helen Spencer and Sandy Mason.”

Mitchell says that, although Spencer’s vision and philanthropy made the library’s construction possible, it was Mason who pushed for a building designed specifically to meet the needs of rare books, manuscripts, archives and their users. The new library opened in 1968 and has since been a haven for the international scholarly community, as well as faculty, students, and residents of Kansas.

William J. Crowe, vice chancellor for information services and dean of libraries, will succeed Mason as Spencer librarian in July. He admits that the prospect of taking over her position is a bit intimidating.

“The word ‘daunting’ comes to mind,” Crowe says. “Sandy Mason is the only KU librarian of this generation who is truly known internationally. She has contributed enormously to the building of our research collection and, as importantly, to the ethos of free inquiry.”

Mason says that building and sustaining that ethos has been the highlight of her distinguished career.

“I like the way things have been done here,” Mason says. “I’ve had the ability to be allowed, even encouraged, to do my job by the University. That’s rare.”

As rare—and as treasured—as Mason’s 42-year commitment to KU.

Faculty salaries key issue in state budget debate

Even though Gov. Bill Graves cut their request for sizable faculty-salary increases by more than half, the Kansas Board of Regents and Chancellor Robert E. Hemenway remain optimistic.

“This is the first step toward a solution and the governor should be commended for taking that step,” Hemenway says. “I wish his recommendation were larger, but I am encouraged that the problem of low university salaries is beginning to be addressed.”

Graves proposed a 3.5 percent pay raise for faculty at the University and five other Regents universities. His proposal also includes a $2.5 million pool to be set aside for outstanding faculty to help prevent the departures of professors to other schools offering more money and benefits.

The Regents had sought a 7.6-percent increase consisting of two main components: a 3.6-percent increase needed to keep pace with faculty salary growth within peer institutions, and a 4-percent increase needed to achieve parity with the average faculty salaries at peer institutions. In three years, proponents said, the initiative would bring Regents schools to the level of their peer schools.

Faculty salary issues have become the centerpiece of the Regents’ budget request this year because of the recent exodus of

KU ranks:
- in the 35th percentile nationally for professors’ salaries
- in the 29th percentile for associate professors’ salaries
- in the 38th percentile for assistant professors’ salaries

From 1994 to 1997, inadequate salary was a significant factor in 71 percent of all KU faculty resignations.

The average salary increase for faculty taking positions elsewhere during that time was more than $17,000.
Study says more freshmen have staying power

Although you probably will not hear Chancellor Robert E. Hemenway exclaim giddily, "You like me, you really like me!" à la actress Sally Field, you can bet he's thrilled about the recent increase in the University's freshman retention rate. According to a report by the Board of Regents, fewer first-time freshman are leaving KU than at any time since the early 1990s. The report says that the dropout rate at KU has declined from 24.4 percent for the freshman class of 1994 to 22 percent for the 1996 class.

Tom Hutton, '83, director of University relations, credits KU's pursuit of higher-quality students and its deliberate efforts to provide outreach and mentoring.

"We've got more qualified students who can take advantage of new programs to help them assimilate," he says. "That combination is a formula for success."

Hemenway agrees. He says he is not surprised that the number of dropouts has fallen, because retention has been a calculated focus of the administration for the past few years. Successful retention begins, he says, with academic talent.

"We are very intentionally trying to recruit a more academically talented freshman class each year," Hemenway says. "Our average entering ACT score has gone from 23.4 to 24.1 over the last four years, and there's a direct correlation between the increase in academic talent and your retention and graduation rates."

Hemenway also praises the administration's efforts to make new students feel more comfortable in the University environment. In addition to formal programs, the University also is more personally involved with students. Last fall, administrators called nearly 1,500 freshmen early in the school year to ask how they were doing and answer any questions.

"We are trying to put the freshman student at the center of the University in their first year here," Hemenway says. "Seems they really like the attention."

professors to higher-paying institutions. The Regents' report cites specific examples of professors who have left KU, including a professor of business whose move to Oklahoma State University increased his salary by $42,500 and a nationally known East Asian professor who left for a school that offered his children free tuition.

"I think it's really important that this be the year in which the Legislature tries to respond to the serious deficiencies in faculty salaries that have grown up over the last few years," Hemenway says.

According to the Regents' report, inadequate salary was a factor in 71 percent of all KU faculty resignations from 1994 to 1997. Regents schools' salaries are, on average, 12 percent below their peer institutions.

In a letter to faculty and staff, Hemenway makes it clear that KU values its employees and is committed to keeping them. "Retaining our excellent faculty and staff, and being able to recruit when retirements or resignations occur," he writes, "are absolutely critical to the continued excellence of the University of Kansas."

Overall, Graves' recommended budget would provide Board of Regents universities $747.8 million in fiscal 2000, $21.6 million short of the $769.4 million the Regents requested. Besides the gap in faculty salaries, the governor's plan also cut $1.2 million in the general operating budget and $200,000 for operating new buildings.

But the Regents have not given up. Graves' proposal still must go to the Legislature for approval, and the Regents plan to spend the 90-day legislative session lobbying for the funding they requested.

"We will ask the Legislature to recognize the seriousness of the salary problems faced by universities," Hemenway says. "We look forward to making that case in Topeka."

Alumni who would like to help make the case for higher education can contact the Alumni Association's Jayhawks for Higher Education at 785-864-4760.
ROCK CHALK REVIEW
MILESTONES, MONEY AND OTHER MATTERS

- **ELEANOR MALOTT** was not content to sit on her hands. In fact, she preferred to be on her hands and knees, planting the flowers and trees that would make KU one of the country’s most picturesque campuses. The late wife of former Chancellor Deane W. Malott, c’21, Malott was a beloved campus figure. To honor her commitment to the beautification of Mount Oread, Chancellor Robert E. Hemenway and other University officials will join surviving members of the Malott family to dedicate the Eleanor S. Malott Plaza and Memorial Garden May 15, the weekend before Commencement. Construction began last April. The garden will bloom between Wescoe and Malott Halls.

- **MARILU GOODYEAR**, associate vice chancellor for information services, will succeed William J. Crowe as vice chancellor. Crowe will become Spencer Librarian. Goodyear came to KU in 1996 and has served as associate vice chancellor since 1998. She also has been a courtesy professor in the department of public administration, teaching information policy and systems. Crowe, who also had served as dean of libraries, will continue his lead role in fund-raising for the libraries and information services.

- **SPRING ENROLLMENT FOR ALL CAMPUSES** was 26,297, an increase of 83 students from spring 1998. Lawrence-campus enrollment, which includes the Edwards Campus in Overland Park, was 23,848 on the 20th day of classes, an increase of 52 from spring 1988. KU Medical Center enrollment was 2,397, compared with 2,366 in 1988.

- **KARL EHRLICH**, c’44, m’47, and his wife, Barbara, have contributed $300,000 to KU Medical Center to support individual projects by students and professionals. The fund will provide up to 90 percent of the cost for projects conducted at the Med Center, including those administered by doctors, nurses, technicians and other healthcare workers. Grants will be given in scholarships, fellowships or support for continuing education or training.

- **DALE SEUFERLING**, ’77, has led District VI of the Council for Advancement and Support of Education (CASE) as district chair and conference chair and in numerous other volunteer roles for the past 22 years. For his dedication, Seufeling, senior vice president for development at the KU Endowment Association, received the group’s Distinguished Service Award Jan. 19. Seufeling now serves as a member of the national CASE Commission on Philanthropy. CASE is an international organization for professionals who work in fund-raising, alumni relations, communications, admissions and other areas of higher education and independent secondary education.

- **SCOTT AND CAROL SWANSON RITCHIE** of Wichita have given $100,000 to help support performances at the Lied Center. Their contribution will be matched by the Lied Foundation and will establish the Scott and Carol Ritchie Performing Arts Endowment to support appearances by nationally and internationally known performers. Scott, c’54, and Carol, d’54, are longtime benefactors of the University.

CLASS CREDIT
AND THE WINNER IS ...

IN AN ACADEMIC CAREER marked by prestigious awards and internationally recognized achievements, Daryl Busch just keeps outdoing himself. Busch, Roy A. Roberts distinguished professor of chemistry, now can add president of the American Chemical Society to his list of credentials.

"It’s exciting because there’s much respect that comes with this job," Busch says. "In some ways, it’s even more beneficial to the University than it is to the individual."

Busch, who came to KU in 1988, received a 1994 Higuchi/Endowment Research Achievement Award and the international Izatt-Christensen Award for Research in Macrocyclic Chemistry that same year. In 1996 he received the Louise Byrd Graduate Educator Award. His research focuses on transition metal coordination chemistry.

As president of the American Chemical Society, Busch will preside over the world’s largest scientific society, which consists of more than 157,000 chemists and chemical engineers. While keeping up with his new job’s intense schedule, Busch hopes to help determine the organization’s direction, support the funding of research by working with Congress, and increase the accessibility and understanding of chemistry to the public. His first priorities, though, are a little more personal.

"I’ve told everyone I hope to get out of this with two things intact,” Busch says, “my marriage and my research group."
Blessed, but not by fortune

A well-chosen roster of baseball stars who fell short of Hall of Fame immortality reminds us all that fate is not always kind, even for the lucky few who taste glory in their times.

The ancient Greeks imagined their gods residing on Mount Olympus. The Scandinavians envisioned the souls of their heroes transported to Valhalla, where an eternity of joy and feasting awaited them. The Romans built their own Pantheon and the British adapted Westminster Abbey to the same purpose.

For American baseball players, the shrine of immortal celebration is the Hall of Fame, in Cooperstown, N.Y., the apotheosis "birthplace of baseball." Baseball's immortals from Babe Ruth, Ty Cobb and Christy Mathewson to George Brett, Nolan Ryan and Robin Yount are honored here, with bronze plaques noting their principal achievements. Most baseball players imagine themselves somewhere on the pilgrimage to Cooperstown, while fans, journalists and historians mark the players' progress toward the Hall of Fame.

There are no bronze plaques in Cooperstown for the baseball players remembered in poignant detail in They Tasted Glory. Wil Linkugel, professor emeritus of communication studies, and his Wayne State University colleague Edward Pappas describe the ironic frustration of great expectations raised by the early performances of 17 players. They suffered injury, illness or some other inexorable circumstance that diminished their talents and shortened or ended their careers. It is a worthwhile project.

The authors' choices are well made. They give attention to the names that any knowledgeable baseball fan would think of immediately in this context: Smoky Joe Wood, the phenomenal rival of Walter Johnson, who stood atop the baseball world in 1912 but was washed up with an arm injury only three years later; Pistol Pete Reiser, whose 1941 rookie year showed a range of talents that led contemporary observers to compare him to Ty Cobb, but whose repeated collisions with outfield walls shortened and reduced his career; Herb Score, the lefthanded Bob Feller, who was almost killed by a line drive off the bat of Gil McDougald at the beginning of his third major-league season. Many fans will also recall Tony Conigliaro's beaning, J.R. Richard's stroke, Thurman Munson's fatal plane crash, Steve Busby's rotator-cuff injury and Lyman Bostock's death by urban violence.

Players less well known or less frequently remembered also receive appropriate treatment here: Vean Gregg, the most ancient and obscure of this unfortunate company, was a worthy contemporary of the almost mythical Grover Cleveland Alexander; Hal Trosky seemed on his way to a career comparable to that of Jimmie Foxx or Hank Greenberg before migraine headaches stopped him; Paul "Daffy" Dean would be completely forgotten today except for his famous brother, Johnny Beazley anchored the St. Louis Cardinals' 1942 champions but hurt his shoulder while he was in the service.

The authors do not generalize some cosmic, overarching moral from the lives of these players. They focus instead on the individual stories, blending season and career statistics, history, game accounts, journalism and archival photography in a style that will be familiar and comfortable to readers who know the baseball books of Bob Broeg, John Carmichael and Arthur Daley. Like virtually all authors of baseball books, these men typically wrote of the greatest players, their greatest days and the best-known stories about them. They Tasted Glory gives a good balance to the hero-making and myth-making that is inevitable in sports literature in general and baseball literature in particular. "They Tasted Glory serves as a stern reminder of reality," says American League president and former KU Chancellor Gene A. Budig, "and increases our collective appreciation for player greatness."

In one of the finest baseball books ever published, Lawrence Ritter chose for his epigraph and title Ecclesiasticus 44:7: "All these were honored in their generation, and were the glory of their times." In echoing that title, Professors Linkugel and Pappas tell us both of players honored for one brief season, such as Mark Fidrych, and for superb careers perhaps just short of the Cooperstown apotheosis, such as those of Tony Oliva and Kirby Puckett.

Budig says it well: "Immortality in sport requires great skill and uncommon luck." The authors remind us of those who enjoyed the talent, but not the fortune. Their tone is not an elegiac one of "sad stories of the death of kings." Rather, they tell of players who tasted glory. These, too, were the glory of their times.

—Carothers, professor of English, recently participated in Statehouse ceremonies honoring Hall of Famer George Brett.
Words to the wise

Faculty writing centers give way to student-friendly enclaves designed to make writing a treasured shared experience throughout the academy

Last fall KU overcame a troublesome case of writer's block. If you've ever suffered the condition, you know that some extra thinking and lots of talking and listening usually break the impasse.

That prescription finally worked at KU, where administrators have wrestled with how to help students become better writers without appearing to have too many students in need of remedial help. In 1985, KU created the Writing Center, not to work with students, but to work with faculty, who could then work with students.

Staff members, however, kept a campuswide, drop-in writing service as their goal. More than a decade and six proposals later they have the Writer's Roost. The signs on the doors invite all students to drop in to improve "writing for classes, for work, or for personal development." Finally KU's block against writers has cracked.

"The old Writing Center was based on the medical model," says Pat McQueeny, d'68, g'71, g'87, PhD'95, who has been with the program since 1986 and now serves as its director. "We were supposed to fix the injured and wounded. People simply saw us as a MASH unit."

With time the biases and the people who held them changed. "For one, more high schools and junior colleges got writing centers," McQueeny says. "Newer students kept saying, 'I can't believe KU doesn't have a writing center.'" Concerns about retention, a renewed commitment to undergraduate education and fresh ears in the provost's office helped.

In the end, McQueeny notes, entering the Big 12 Conference may have offered the final push to a full-service center. When McQueeny put KU on a chart with the other Big 12 schools, it stood alone as the only one among the 12 without an open-access writing center. The Writing Center at the University of Texas alone logged almost 5,000 visits last year. "The gap was just too obvious," she says.

Whatever the reasons, the image and services of the Writing Center, now known as Writing Consulting, have changed. Pop into the Writer's Roost in the Sunflower Room of the Burge Union and you'll find a large, airy space filled with desks, computers and small groups of people talking about writing. You'll also find Michelle Edicke, the program's new assistant director.

This roost, like the others on campus, is Edicke's brainchild. Hired last summer after Writing Consulting knew it could expand, Edicke brought energy and a fresh viewpoint to student writing.

Students and their teachers, after all, are all members of the academy, and everyone in the academy writes, she says. So in a community of writers, what separates one writer from another simply is experience.

"And we don't remediate people for their lack of experience. We help them grow."

This soon-to-be PhD in composition puts some theoretical muscle behind her thoughts. To improve, all writers need to talk about their writing, and this one-on-one talk takes them into the Zone of Proximal Development. Simply translated, this sci-fi sounding phrase asserts that through conversation people learn from one another.

"No two people are completely equal," says Edicke. Each brings a different experience to the table. "When someone gives me critical feedback, they kick me up a notch. But in the process they also learn something."

The roosts' tutors, she says, learn more about writing every time they tutor. From freshmen to GTAs to full professors, participants leave the classroom having learned something because they talked and listened to one another.

As they say, it's not rocket science. But it will take some time before people see the Writer's Roost as anything but help for the great unwashed. Recently an English professor stopped Edicke in a Wescoe hallway. "I have a few students I need to send to you," he said. She breaks out in a full smile.

"I told him, 'Not a few. Send them all.' I want to make talking about writing a part of everyone's academic life."

That's an over-the-counter prescription all KU writers can use.

—Judith Galas, g'82, a free-lance writer, served as associate director of KU's Writing Center from 1988 to 1992. She is now the public relations and marketing coordinator for the University's Information & Telecommunication Technology Center.
The Pride of Kansas

Lynn Pride’s elegant dominance has opened the door for teammates’ success and loftier tournament goals.

He blocks like a center, handles the ball like a point guard, knocks down three pointers with ease and routinely defends the opposing team’s top offensive threat. What strikes you first about Lynn Pride, though, is the utter ease with which she virtually glides through a game. The junior forward seems to emerge unscathed by the would-be defenders, sometimes two or three at a time, who attempt to stop her. What’s more, she appears to enjoy every minute of it.

Following KU’s 63-58 win over Nebraska Feb. 13, Pride was leading the 20th-ranked Jayhawks in points, rebounds, steals, blocks and minutes and was the leading candidate for Big 12 Player of the Year. The statistics are impressive—18.1 points a game, 7.4 rebounds, seven double-doubles—but they do not tell the whole story.

“Teams know Lynn can score at will, and they have to double-team her to keep her from scoring,” sophomore guard Brooke Reves says. “That just opens it up for everyone else.”

Defenses that swarm Pride have indeed opened up the KU offense, and her teammates are taking full advantage, most notably Reves and senior center Nakia Sanford. Both have become more productive scorers as opposing teams have tried to zero in on Pride.

While opponents focus on her, Pride...
focuses solely on her team’s goals. “Our expectations are very high on this team,” Pride says. “We think we have enough talent to get on the floor with any team, and just put it all out there and see what happens.”

Sanford agrees. “Every year I’ve been here, we’ve broken some record or set some new standard. This year we want to go even further.”

The way the Jayhawks have been playing, the team’s goal of surpassing last year’s celebrated Sweet 16 appearance does not seem out of reach. The combination of a multiple-threat offense and improved team defense has led the Jayhawks to an impressive 20-7 start. The record included a 21-game home winning streak, the third-longest streak in the nation (the streak ended Feb. 16 in a 52-55 loss to Iowa State).

“The players have grown into their roles and come to understand what they need to do individually for us to win as a team,” says Coach Marian Washington, who collected her 500th career victory, fittingly, in a Senior Night victory over Oklahoma. “I think we’re in really good shape.”

The players think so, too. As the team moves from the locker room to the court before each game, the players walk in a tight bunch, singing “K-A-N-S-A-S” loudly and joyfully. It is a simple cheer, a way to get motivated in the final minutes before tip-off.

But its sheer volume and unity suggest a force to be reckoned with.

Men’s confidence intact despite stirred-up season

The first indication that the men’s basketball team would struggle came in a Dec. 8 loss to Iowa at Allen Field House. Though not the first loss of the season, it marked the end of a 62-game home winning streak, the nation’s longest, and stunned players and fans alike. More important, it set the stage for a season of fallen records and ended streaks.

KU responded to the Iowa loss with three straight wins, then lost to unranked St. Louis. Again the team rebounded by compiling a winning streak, this one four games. The streak included an authoritative win at Missouri, ending the Jayhawks’ three-year drought at the Hearnes Center. But just when it seemed the team had time in the ASU rotation would be limited. Call transferred to KU for his final season of eligibility.

“This is the best pitching depth since I’ve been here,” says Randall, who is entering his fourth season at KU.

Randall is particularly excited about his infield, which includes senior Chad King (a medical redshirt last season) at first base, sophomore Brandon O’Neal at second, senior Sparky Wilhelm at third and sophomore John Nelson at shortstop. Replacing Josh Dimnick (now in the Houston Astros’ organization) at catcher will be junior Shane Wedd and freshman Lukas McKnight. “We have the ability to be as good defensively as any infield in this league,” Randall says of a conference that placed half of its teams in preseason polls.

The Jayhawks are particularly excited about playing in the completely refurbished Hoglund Ballpark, which underwent $1.8 million in improvements, including a new restroom and expanded dugouts. “New ballpark, old ballpark, we expect to play well and win,” Randall says. “But there’s no question that a new ballpark is a boost for our players and our fans.”

The ballpark will be dedicated at 1:30 p.m. March 6, before the 2 p.m. game against Texas.

Also on the agenda is a new aluminum bat, mandated by the NCAA, featuring a slightly narrower barrel and weighing 2 ounces more than last year’s model. In the wake of last year’s 21-14 College World Series championship game, the NCAA hoped to reduce the ball’s so-called “exit speed,” or the velocity with which batters can send baseballs toward the fences. Also at issue for some officials was the safety of pitchers.

The NCAA flirted with the idea of switching to wooden bats or drastically altered aluminum bats, but Randall says the changes finally agreed upon probably won’t lessen the offense that has come to dominate college baseball. As for next year’s bat choice, Randall won’t make predictions.

“I don’t dislike the aluminum,” Randall
says, "but as strong as our kids are getting, they’re making home runs too easy. If they would make aluminum closer to wood, I would be all for that. Actually going to wood bats would probably be too drastic. It would take the offense completely out of college baseball."

Bat specifications dominated the off-season talk in college baseball. Randall, however, insists he did not let himself or his players get too caught up in any of it.

"I think our players would like to use wood, simply because major-leaguers use wood," Randall says. "But I don’t think safety is an issue. The aluminum bats are safe. Either way, it seems like everyone wants to make it a big thing, but it’s not something I’m dwelling on."

**MAGIC MOMENT:** Coach Roy Williams congratulates senior guard Ryan Robertson after Robertson hit a free throw with no time remaining in overtime to beat Oklahoma State, 67-66. It was a fitting field house finale to Robertson’s steady career as a Jayhawk.

found its groove, the Jayhawks lost another non-conference game to unranked Massachusetts, then beat Big 12 leader Texas soundly at home. Coach Roy Williams worried that he actually had two different teams, that he didn’t know which team would show up on game night.

The odd season continued with consecutive losses—at home to Missouri and at Nebraska—for the first time since 1994. After putting together a string of three victories, the Jayhawks lost consecutive games again, including a home game to Nebraska that marked the first time since 1990 that Kansas had been swept by a conference opponent. KU dropped out of the AP poll, reappeared, then disappeared, receiving not one vote for the first time since 1989.

The Jayhawks then rebounded yet again, charging down the homestretch with victories over Kansas State, Oklahoma and Oklahoma State (with the Feb. 28 Iowa State finale still awaiting them as of press time).

"This has been my hardest year," Williams says. "I haven’t pushed the right buttons with this team."

Despite Williams’ frustration over his team’s lack of consistency, he says he is by no means ready to abandon hope.

"I think this is the type of team that can make a run," he says.

His players think so, too. Although their confidence has been shaken and their heart questioned, to a man these Jayhawks say they’re not finished.

“I have confidence in each and every one of my teammates,” junior forward Nick Bradford says. “Our main focus is trying to become a better basketball team. We want to peak at the right time.”

Forward T.J. Pugh, one of four seniors who were honored Feb. 22, agrees.

“We’ve always seen potential on this team,” Pugh says. “We have yet to show what kind of team we can be.”

There certainly have been glimmers of potential throughout the season. The sophomore tandem of guard Kenny Gregory and center Eric Chenowith has shown dominance at times, and freshman guard Jeff Boschee’s fearless shooting has lent a much-needed boost to KU’s frequently famine-scented offense. Senior guard Ryan Robertson is looking for his shot and is scoring more.

Although they have been fewer than fans have come to expect, there have been memorable moments in the field house—junior forward Lester Earl’s courageous effort in his Jan. 9 return from knee surgery, Boschee’s game-winning three-point shot against Colorado, Gregory’s
acrobatic three-point play that helped squelch a Kansas State run, Robertson's victorious free throw with no time on the clock in overtime against Oklahoma State on Senior Night.

The high-flying Gregory is perhaps the best metaphor for this Kansas team: at times promising and even brilliant, at times ineffectual and searching. Although quick to discourage the notion that his performance unduly influences the team, Gregory admits there is a connection between his production and KU's record.

"I don't want to put too much pressure on myself," Gregory says, "but we're a much better team when I play well."

Williams says that although he's heard countless remedies to aid his temperamental team, he will not resort to any psychological tricks to coerce better performances out of his players. What KU needs, he says, is simply to put everything together on game night.

"I've made my living trying to be honest with my guys," Williams says. "I want to be able to look them in the eye and tell them we can win. And I believe we can, but the hunger to win must be their own."

**Athletes make the grade, delight in fans' cheers**

As halftime descended upon Allen Field House during the KU-Nebraska men's basketball game Feb. 10, scores of students took to the floor, reveling in the roar of the crowd as they were acknowledged for their achievements.

Of course, these weren't your average students, and the roar of a crowd is probably not unfamiliar to them. This group consisted of more than 320 student-athletes who had achieved Jayhawk Scholar status by earning a 3.0 GPA or better in the spring or fall 1998 semesters. The 51 student-athletes who earned a 4.0 were introduced, while the others stood proudly behind them, together forming a strong case for what is right about college athletics.

"It's fun to see the students get recognized for something they're not usually known for," says Paul Buskirk, '83, g'89, associate athletics director for student support services. "It's great to see them break the stereotype that athletes don't succeed academically."

Buskirk says that roughly 40 percent of KU athletes achieved Jayhawk Scholar honors in the past year. The spring 1998 semester was record-breaking for several teams. Eight squads posted cumulative GPAs above 3.0. Moreover, Buskirk says the overall performance of all student-athletes has been consistently encouraging over the past five years. Although he gives the most credit to the students themselves, Buskirk also cites other reasons for their success.

"The coaches are recruiting more capable students, as well as supporting those students all the way through and making their degree a priority," Buskirk says.

"Also, [Athletics Director] Bob Frederick's commitment to academics and his initiating the Hale Achievement Center have shown everyone that we stress the 'student' in 'student-athlete.'"

The Hale Achievement Center, which houses student support services, is filled at all hours, Buskirk says, with student-athletes and tutors struggling with coursework and papers and time-management, just like other students. He says that what makes the student-athlete's experience unique is their visibility in the University community.

"All students have time-management concerns," Buskirk says. "What really makes the student-athlete's challenge different is the pressure that comes with representing the University in a very public way."

Buskirk was pleased to find out that the overall student-athlete GPA was only slightly lower than the campus Greek GPA. He says it shows that, regardless of athletics pressures, academic backgrounds or public perceptions, success is still determined by the individual's commitment.

"Any student who is truly motivated to achieve and who uses the facilities can succeed," Buskirk says. "It really comes down to character."

**INDOOR TRACK**

**RUNNERS CHARLIE GRUBER**

and Kevin McGinn truly went the distance to claim victories at the Big 12 Indoor Track and Field Championships Feb. 19-21. Gruber, a sophomore, posted the second-fastest time in KU history to win the 1,000-meter run in 2 minutes, 25.30 seconds. Senior McGinn won the mile in 4:12.39.

The victories helped boost the men's team to a seventh-place finish, its highest in the meet's three-year history.

On the women's side, sophomore Andrea Branson won the pole vault with a school and Big 12 meet record vault of 12 feet, 9 and 1/2 inches. The women's team finished 12th.
Wasted Youth?

BY CHRIS LAZZARINO

ILLUSTRATION BY BARRY FITZGERALD

Alcohol abuse is nothing new to KU.

But administrators hope new messages about moderation

will diminish this dubious tradition.

The crackdown came after a joy ride stained a splendid fall afternoon. Four KU men and their KU dates. A roomy car. Alcohol. The men later claimed they had shared a few surreptitious sips before leaving Lawrence and during a stop along the road to Topeka. They insisted they weren’t drunk.

But trouble found them anyway, and the car overturned during the return trip to Lawrence. No serious injuries resulted, but the students had bruises waiting for them back on the Hill.

Gossip had already churned across campus about a popular football player expelled for excessive Commencement-weekend celebration the previous spring. The chancellor heard the griping whispers, and his frustration was so great that he took the unusual step of defending himself and his attitude about alcohol by airing the private disciplinary matter on the front page of the University Daily Kansan. He explained to students and colleagues that the unnamed player had twice appeared before him for alcohol-related disturbances and twice the young man had given his word as a gentleman that drinking would no longer be a problem. When the student-athlete was then involved in more disruptions during Commencement weekend, the chancellor had endured enough. Three strikes and he was out ... but the chancellor’s alcohol scandals were only beginning.

During a pregame gathering at Memorial Stadium that fall, the chancellor and many of the University’s most prominent alumni and guests watched in shock as the sheriff slapped handcuffs on a bottle-toting alumnus. The arrest made the newspapers, and the weary chancellor was again forced to confront campus alcohol troubles.

And then, just a few weeks later, came the heavily-reported spectacle of an overturned car that spilled onto the highway students who defensively explained away the liquor on their breath and in their attitude.

Enough.

“There is some confusion regarding the attitude of the University toward liquor offenses,” the chancellor proclaimed. “The present temper, following the incidents of last Commencement, is pretty stern and uncompromising. The policy proposed and approved for this year is to suspend by a full year any student who meddles with intoxicating liquor in any means, no matter whether he is legally intoxicated or not.”

And yet the car-wreckers got lucky again; the driver and his buddies were suspended only for the fall semester, which was already almost over. They battled on anyway, insisting the injustice be overturned by the top man—and they didn’t mean the chancellor.

During an appearance before the Kansas governor and his executive council, one of the suspended students testified that “fully 30 percent” of KU men drank alcohol. Another student, insulted by the chancellor’s suspension, assured the governor that his classmate’s estimation “was too low.” Not guilty, it seems, by association.

The year was 1924.

The better part of a century later, the University is following Chancellor Ernest H. Lindley’s lead, starching a renewed stern and uncompromising attitude toward alcohol.

A citywide task force initiated by Chancellor Robert E. Hemenway last fall examined alcohol abuse and underage drinking from every possible angle. KU, Haskell Indian Nations University and Lawrence public schools conducted surveys that yielded some less-than-surprising but still frightening statistics.

“Just about every student can tell you horror stories,” Provost David Shullenburger says without a trace of glibness in his voice. Because the horror stories are not Saturday-morning anecdotes
about funny Friday drunks. They're stories, in Shulenburger's words, "of the deaths and the near-deaths," the nights when shattered young people go home hurt or maybe don't go home at all.

There's reason for Shulenburger's Lindley-esque humorless stance. He didn't find it very amusing when a splendid spring night was stained by the blood of a freshman who bounced out of an off-campus bar, bounded across Tennessee Street and was dead two steps later, run over by another freshman who was carting home an S.U.V.-load of friends from yet another off-campus bar.

Things didn't get much better during the rest of 1998. In November, three 20-year-old KU students crossing Massachusetts Street were struck by a pickup truck; prosecutors later said the driver, a 42-year-old Leavenworth man, was drunk. One of the students suffered damaged kidneys, a lacerated liver, broken ribs, a broken knee and severed nerves in his leg. One young man broke both knees. The third broke his pelvis and collar and thigh bones.

Two weekends later, a KU freshman walking home from her waitress job at a downtown club was struck as she stepped into a crosswalk on Kentucky Street. She ended up in KU Medical Center with serious head injuries; to nobody's surprise, the police report said the driver had been drinking.

"I really hope this is a wake-up call to all the students who drink and drive," the woman's distraught roommate said in the Dec. 2 Lawrence Journal-World.

Exactly one day later, Student Union Activities hosted one of the screenwriters who wrote Animal House, the boozy movie tribute to drunken rites of college. "We went into the culture and touched a button," Chris Miller proudly told his KU audience. "I know it will probably be the greatest thing I ever do in my life."

Timing is everything in comedy. There was little humor in the timing of Miller's visit. "KU is a place," Shulenburger says, "where, on most things, an insult to one is an insult to all. You remember the pizza incident a few years ago where the black delivery person was racially insulted. The whole campus was outraged by that. We need to develop the same kind of outrage when similar harm is done by alcohol. We need to develop a norm that when someone is drinking excessively, instead of laughing about it or treating it as a quasi-heroic activity, folks go to that person and say, 'Enough.'"

"We need to develop a norm that when someone is drinking excessively, instead of laughing about it or treating it as a quasi-heroic activity, folks go to that person and say, 'Enough.'"

"We need to develop a norm that when someone is drinking excessively, instead of laughing about it or treating it as a quasi-heroic activity, folks go to that person and say, 'Enough.'"

Enough.

As a result of its October survey of alcohol abuse, as well as recommendations issued by the citywide task force, the University this spring will begin preparing a marketing campaign that appears capable of yielding as many solutions as slogans, perhaps even more answers than antonyms.

Created nine years ago at Northern Illinois University and funded at KU with a $450,000 public-health grant from the Kansas Health Foundation, the "social norms" program aims to emphasize a positive reality about the drinking habits of college students.

"A lot of young people who consume alcohol, who rightly think they don't have a problem, will still go out and drink too much because they think that's what everybody else is doing," says Michael Haines, coordinator of health enhancement services at Northern Illinois and the program's creator. "This program is designed to finally tell them the truth about what everybody else is doing. And the truth will usually surprise them. College students are a lot healthier than they give themselves credit for."

The Northern Illinois program is designed to combat powerful images that are repeatedly drilled into young people and their frightened parents. Even respected journalists find it difficult to lay off an easy mark, and it can sometimes seem as if big-name news shows and national newspapers and magazines are in a blind race to see which outlet can be the first to deliver (with plenty of video and photographs) the shocking truth that college students can be scary when they drink.

CBS News' normally tranquil "Sunday Morning" introduced its recent "Battle of the Binge" segment with the sexy hook of "alcohol-fueled riots at six American universities last year," then focused its entire segment on Penn State. Another CBS News program later that week traveled to Michigan and Michigan State universities; video from student hangouts was used to depict the death of an MSU student who drank 24 shots of liquor on his 21st birthday. The next night, ABC's "20/20" retold the tragic, alcohol-induced death of a freshman fraternity pledge at the Massachusetts Institute of Technology, including heartbreaking interviews with the shattered parents.

Closer to home, KU's battle against booze was big news, too. The Associated Press, The Kansas City Star, The Topeka Capital-Journal and even the University's own news release included a survey finding that 58 percent of surveyed students reported binge drinking within the past two weeks.

"Binge" drinking, by the way, means having five or more drinks in one sitting, which could mean a party that lasts from 7 p.m. until 2 a.m., and applies equally to 200-pound senior men and 100-pound freshman women. The "binge" terminology
Michael Haines and his colleagues at Northern Illinois University’s campus health center tried in 1988 to curb problem drinking with traditional education. The message was lost and the effort failed dreadfully.

“At the end of the year,” Haines says, “the number of students who drank heavily actually increased.”

Then Haines and his colleagues noticed a statistical oddity: When students were asked how many drinks they had when they partied, the majority said they drank five or fewer servings; when asked how many drinks other students consumed while partying, they thought that 70 percent of their fellow students usually had six or more drinks.

“So we have this discrepancy,” Haines says, “between the reality, the real norm and the false norm. The research theory suggested that because norms are such a powerful shaper of behavior, if we could shape the false norm more toward the real norm, we would reduce drinking and its associated problems.”

Haines says NIU health educators avoided the usual “high-cost, low-impact programs,” such as distributing literature in dorms and Greek houses, and instead turned to “low-cost, high-impact media outlets,” including stories and advertisements placed in the campus newspaper and placards on buses.

The messages told students about a reality they’d never heard before, that a majority of their classmates did not consume as much alcohol as they might think. It suddenly became cool to ease away from heavy drinking.

“We had a 44 percent drop in the number of students who drink more than five drinks when partying,” Haines says, “and a 47 percent drop in the number of students who had alcohol-related injuries to themselves within the previous school year.”

Haines says the program has since worked similar marvels at four other colleges and universities, including the University of Arizona. At KU, the Kansas Health Foundation-funded program will start with a spring survey directed by Haines and other researchers he has trained. Armed with fresh numbers, a media campaign will then be planned to saturate University students with good information about drinking habits within their unique culture.

“A study by the National Institute of Drug Abuse conducted since 1980 shows that we had fewer numbers of drinkers on campus in the fall of 1997 than we did at any time in the last 17 years,” Haines says, “and that we have the lowest levels of heavy drinking than we’ve had in the last 17 years. That very important piece of information has been overshadowed by the 20-some deaths we’ve had in the past year, a number that’s only being reported now because this time somebody is counting.

“How many college students do we have in this country? Millions? These 20 or 24 deaths are not indicators of college drinking. It is aberrant behavior being held up as typical, and that’s what begets the false norm, as far as we’re concerned.”
halls since the drinking age rose to 21 in 1985, and the University also announced a vigorous "zero-tolerance enforcement" policy of its existing rules; residence-hall advisers will no longer be able to look the other way if a student—even a 21-year-old student—keeps a few beers in a dorm-room mini-refrigerator.

"I just don't think that's going to be successful, and I'm afraid it will cause more harm than good," Haines says flatly. "I think college presidents have been forced to take tough stances because, until now, nothing else has worked."

KU administrators could not disagree more.

"I don't find very compelling the argument that alcohol should be permitted in residence halls so that someone can pass out in an environment in which they're surrounded by friends," Hemenway says. "That seems to me to be a particularly misplaced and illogical argument because it assumes that one of the natural effects of drinking is to drink to excess and to drink until one loses consciousness."

In fact, that is precisely one of Haines' assumptions. Haines argues that in every society with alcohol, most novice drinkers will have at least one or two frightening experiences that could include unconsciousness or memory loss. That's one reason why he cringes when polls such as KU's make an issue of the fact that 41 percent of surveyed students reported missing a class in the past year because of alcohol ("How many kids skip class to stay home and play Sega? Are we going to crack down on video games?"). 39 percent say they passed out within the past year and an equal number had memory loss.

"In most cultures, that first bad experience with alcohol happens in the family setting, where the young person is safe," Haines says. "Not ours. We push them outside of the home and into a world where much more harm can come to them."

Says Provost Shulenburger: "I understand his perspective, but it just doesn't fit the legal environment that we live in. Mr. Haines just doesn't have to deal with that from the administrative and legal point of view."

Hemenway says the huge gap between realities as they actually play out on college campuses and the reality of a law that denies alcohol for a majority of undergraduates must be filled by education—which is part of the chancellor's three-point plan of reduce, regulate and educate.

"The University, if it is going to be realistic, is going to recognize that you're going to make decisions about alcohol before you're 21 years of age. Your first decisions about alcohol are probably going to be made in high school, and what the evidence is showing is that it's probably even earlier than that.

— Chancellor Robert E. Hemenway

KU's survey reported that 51 percent of respondents admitted they had driven under the influence of alcohol within the past year. Haines' response: "It's been shown that, when answering this question, high-school and college students don't make a distinction between having one drink and then driving and actually driving under the influence, in the legal sense. I automatically throw that one out."

The KU survey also showed that 2 percent said they had been arrested for DWI or DUI. "So that means 98 percent do not get arrested for DUI," Haines says. "Has that
message been delivered to the students yet?”

Haines is also irked that KU surveyed its students in October, and he’s eager to conduct his own survey this spring while preparing for his program’s launch in August. “In the fall, the beginning of the school year, students have fewer responsibilities. They are also coming together with their old friends and making new friends. Socializing is a premium behavior at that point in the year, and all cultures use alcohol as a social substance. In the spring, students are more likely to be more serious about their studies. You will always get higher rates in the fall than you will in the spring.”

Shulenburger concedes, in fact, that the University was not entirely pleased with its survey, in part because it was a national model that wasn’t tailored to specific KU needs. He welcomes Haines’ survey and hopes the social-norms program succeeds here.

“In order to have something that works,” Shulenburger says, “we’ve got to have better questions. We’re going to have to redo that survey with his guidance in order to be able to take the data to the students.”

Dig into the University’s disciplinary files and pick a page. Chances are there’s an alcohol violation to be found.

Chancellor Francis H. Snow once faced down seven students who admitted to the University’s disciplinary board that they had shared a jug of wine in their room; worse, they had engaged in “boisterous activity.”

The year was 1893.

Then there was the May Day merriment that landed six KU men in serious jeopardy. As college nights so often do, this night got rolling sometime around 1 a.m. The men had gathered steaming at a jumpin’ downtown joint called The Hole in the Wall, then set out in a “drunken crowd” that wandered the dark streets. The men had themselves some high-spirited (but unspecified) fun at the Santa Fe depot, then, tiring of walking, they somehow acquired a cab—which was eventually abandoned, broken windows and all, in the middle of KU’s football field.

One of the accused men testified, “I am not certain where I was, but I do say, positively, that I was not out with the disturbing crowd of which I have been accused.” Another young man said he was home well before midnight: “After playing solitaire and getting into the pantry,” he told the disciplinary board, “I went to bed.” Nobody believed a word of it. By early June, the men came clean in a letter to the disciplinary board. “The charges against us,” the men wrote, “are substantially true.”

The year was 1902.

Douglas County commissioners also tried to get tough one spring, citing “a shooting and other unwholesome activities” as reasons for banning beer sales wherever there was dancing. When the students complained, commissioners told them to dance without beer.

“Fat chance such a place has of materializing,” wrote a peeved Kansan editor, who also said out-of-touch commissioners were working under “a false and almost foolish assumption.”

The year was 1946.

And then there was the University provost who admitted there was one part of his job he dreaded far more than any other. The sympathy letter home to grieving parents.

“The letter home to parents is the worst, the very worst,” David Shulenburger says. “The sympathy is very real, and there’s nothing worse than having to express that sympathy because a son or daughter died.”

The year is 1999.

Enough.
Old Bones to Pick

Kennewick Man’s controversial emergence so far has told us more about our quarrelsome present than our mysterious past.

By Chris Lazzarino
The annual hydroplane regatta on the Columbia River in Kennewick, Wash., was done for the day. Thunderous roars of the big racing boats still pulsing through their ears, Will Thomas and Dave Decay, college students from nearby West Richland, slipped away from the crowd and returned to a secluded section of shoreline where earlier they had made a remarkable discovery.

Just before the final race began, Thomas had been wading about 10 feet offshore when his foot touched something. He thrust a hand into the knee-deep water and retrieved what he first judged to be a round, brown rock.

"All of a sudden," Thomas told a reporter from the Tri-City Herald, "I saw teeth."

But he also heard boats. The final race of this July afternoon in 1996 was minutes from starting, so Thomas and Decay stashed the skull in a nearby bush. When the last boat crossed the finish line, the two race fans retrieved the skull, dropped it upside down into a bucket and, with some friends tagging along for the adventure, went in search of a police officer.

With Thomas and Decay directing the way, city officers and county deputies rushed to the scene by boat. They found more bone fragments in the muddy shoreline and immediately called for reinforcements. More officers arrived, soon followed by police divers. The site was secured by crime tape. An investigation into a mysterious death was underway.

Nearly two months passed and the toothy remains were all but forgotten. And then a local forensic scientist emerged from his laboratory with a stunning pronouncement: This wasn't a murder, or if it was, it happened about 3,000 years before the invention of the wheel. The skull and its largely intact skeleton, anthropologist Jim Chatters told the world Aug. 27, 1996, were more than 9,000 years old.

But Kennewick Man, as he came to be known, was tantalizing for more than his age and the revelation that he had a 2-inch stone spear point embedded in his pelvis. As a deputy coroner, Chatters' first job, long before the carbon-dating tests were completed, was to determine sex and race; Chatters said Kennewick Man's skull had non-Indian, Caucasoid features, and in fact he first speculated the bones might have been those of a 19th-century frontier settler.

The mystery would not be solved by cops and courts. This was one of the half-dozen oldest skeletons ever found in North America, and one of the best preserved. Kennewick Man was a realm for America's foremost anthropologists. But not for long.

"That's when we knew had to work quickly," says University of Tennessee anthropologist Richard L. Jantz, "or it would have been gone."

Eight leading anthropologists, three of whom received their doctoral degrees at KU, filed their first legal documents to prevent burial of the bones on Oct. 18, 1996.

The impressive gathering of scientists, who are still fighting on with their lawsuit, includes Jantz, c'62, g'64, PhD'70; Texas A&M anthropology professor D. Gentry Steele, PhD'70; and University of Wyoming anthropology professor George Gill, c'63, g'70, PhD'71. The scientific team's point man is Doug Owsley, head of physical anthropology at the Smithsonian Institution, who studied under Gill while earning his bachelor's at Wyoming ("I'm the one who stole him away from medicine," Gill says proudly) and under Jantz and former KU faculty member William Bass while earning his postgraduate degrees at Tennessee.

The scientists are united in more than shared connections to Mount Oread. They are desperate to decipher shared connections with our ancient past.

"I think this is a pivotal point in science," Gill says from his home in Laramie, Wyo. "If we can be denied access to one of the most important scientific finds of the century by the stretching and perversion of laws, then we are in trouble as a culture."

Kennewick Man's non-Indian features stunned the public, but not anthropologists. Gill says that in 1991 he published the first paper to advance a theory, based on 5,000-year-old remains, that the earliest inhabitants of our continent were not American Indians. Steele published a similar theory in 1992, Gill says, and, with findings presented in the February issue of The American Journal of Human Genetics, KU
Kennewick Man isn’t the only mystery being tackled by alumnus Richard Jantz. Using a computer program he developed that turns skeletal measurements into predictions of race, sex and stature, Jantz in early January announced that bones found in 1940 on Nikumaroro (then known as Gardner Island) might well have been the remains of lost Kansas aviator Amelia Earhart.

Earhart disappeared with navigator Fred Noonan in 1937. Three years later, a British Colonial Service officer stationed on Gardner Island discovered a human skull and long bones on the previously uninhabited island. The officer immediately suspected they might be Earhart’s remains, and in 1941 shipped them to Fiji to be examined by Dr. D.W. Hoodless of the Central Medical School. Hoodless, however, announced that the bones belonged to a Polynesian man.

The bones have since disappeared, but Hoodless’ notes, including his cranial and long-bone measurements, were discovered 1997 by a researcher sifting through files in the national archives of the Republic of Kiribati. Those measurements were first analyzed by Karen Ramey Burns, an anthropologist at the University of North Carolina-Charlotte, who decided the lost bones probably belonged to a woman. She turned to Jantz for confirmation, and Jantz says the skeleton was more likely female than male, that she was approximately Earhart’s height, and was more likely of European extraction than Polynesian.

“It’s a very intriguing step,” Jantz says. “I think that the circumstantial case that Amelia Earhart died on that island is very strong. But it won’t be proved that those were her bones until the bones are actually found.”

Professor Michael Crawford and colleagues are interpreting some of the molecular evidence in a similar fashion. Gill says the theories are especially delightful because they approach the problem with different anthropological methods.

Tennessee’s Jantz says a half-dozen similarly old North American skeletons “are a very diverse lot.” With one exception, Jantz says, “they are all pretty different from any modern Native American population that we know of.”

But Jantz quickly cautions that doesn’t mean these ancient people, including Kennewick Man, were Caucasian.

“All the hullabaloo with Kennewick came about because Jim Chatters, before they knew how old it was, said it looked like a Caucasian,” Jantz says. “And in some general respects that might be true, in the sense that contemporary Europeans, or people of European ancestry, have fairly lightly constructed, narrow faces, while modern Native Americans have wide cheek bones and heavily constructed faces. In that general kind of way Kennewick might be construed to be more similar to Europeans.

“However, it’s my guess that he’s not going to be similar to any modern human populations. It’s always going to be the case that the population in any region of the world 10,000 years ago doesn’t look like the population today. This is not just an American phenomenon. All human populations not only undergo change, but people also move in and out of areas all the time. Generally speaking, there’s not continuity in one particular place across 10,000 years. It just doesn’t happen that way.”

Northwest Indians fighting to bury Kennewick Man disagree, and say their oral traditions tell them that their people have, in fact, been here that long. They have no doubt that Kennewick Man is one of their own, and his home is in the ground.

“The remains of our ancestors are buried throughout the country that sustained them; they are not all lined up in grassy, well-manicured cemeteries beneath headstones bear-
ing names and dates," Armand Minthorn, representing the Confederated Tribes of the Umatilla Indian Reservation of Oregon, said during 1998 Congressional hearings on proposed legislation to amend the 1990 Native American Graves Protection and Repatriation Act. "We never imagined that to preserve our predecessors and to allow them to remain at peace we would have to be able to point to a 3-by-8-foot plot of land bearing an inscribed stone."

NAGPRA, according to some lawmakers, federal regulators and scientists, was intended to address relatively recent Indian remains being held inappropriately by museums. "I never envisioned a 10,000-year-old man, to be very frank with you," Rep. Don Young of Alaska, chairman of the House Resources Committee, said of his work in creating NAGPRA. The issue was also overlooked by the Interior Department, according to Francis McManamon, chief archaeologist for the National Park Service, who last year told reporters that "cases like Kennewick Man show that maybe additional guidance would be helpful."

Texas A&M's Steele says he and most of his colleagues embrace NAGPRA. But, Steele adds, NAGPRA's regulations should return remains—even prehistoric remains—only when ancestral descent can be established, and so far the lone link between Kennewick Man and modern Indians in the area is geography.

"You're supposed to use the best possible lines of evidence to substantiate the ancestral relationship or affinity," Steele says, "and geographical proximity is undoubtedly the weakest link of evidence."

And because the Army Corps of Engineers stepped in so quickly and denied scientists access to the remains, Steele says, geographical proximity is the only connection yet established.

"Our issue was not with the Native Americans," Steele emphasizes. "It was with the Corps of Engineers for not following the intent or the established rules and regulations of the NAGPRA, for presuming they had the right to deny access to study without at least establishing a dialogue with us."

While debate raged in Washington and the scientists' lawsuit grew mossy in federal court, the strange journey that led a hunter-gatherer born soon after the most recent Ice Age to his re-emergence in the midst of a hydroplane boat race only got weirder.

Citing a need to preserve the discovery site from erosion, the Army Corps of Engineers in spring 1998 covered the site under tons of rock and dirt and planted thick vegetation. At about the same time, the corps announced that pieces of Kennewick Man's thigh bones were missing, and probably had been missing since September 1996, just months after the discovery.

Despite the seemingly incendiary nature of that announcement, the stolen bones, according to local news accounts, did not become a hot topic. It wasn't until December, after Owsley of the Smithsonian issued a report on his October inventory of the remains, that the issue flared again, and this time both the scientists and Indian tribes were united in their furor that significant portions of both femurs had apparently been stolen.

Owsley said the missing bones represented "a deliberate act of desecration," and would seriously jeopardize efforts to determine Kennewick Man's "stature, size, robustness, functional morphology, age and population affiliation." Marla Big Boy, attorney for the Confederated Tribes of the Colville Reservation, notified the U.S. Attorney's office that she expected an "immediate investigation."

As for the lawsuit, both sides await an expected ruling that would appoint four scientists to conduct non-invasive tests—and those scientists won't necessarily be any of the plaintiffs. If Kennewick Man is shown to be an ancestor of modern Indians, the court is expected to rule that he be turned over to the tribes. If he is shown to be a non-Indian, many expect the court to allow further study.

Either way, everyone involved expects appeals, perhaps as high as the U.S. Supreme Court.

While some of the Indian leaders charge that scientists are being grossly insensitive, some of the scientists in turn charge that the real truth has less to do with religious beliefs and more to do with fears that science might prove that modern Indians did not descend from the first people in North America.

Maurice Eben, representing the National Congress of American Indians, confronted that accusation by telling Congress that Indians "are not afraid of what is going to be found," and at least one of the tribes has reportedly said it would be agreeable to limited scientific testing.

Perhaps the only area of agreement is that the fight has become tiresome, and it's a shame that we greeted Kennewick Man, now under high-tech security in a Seattle museum, with such ill-mannered and divisive squabbling.

"If we can keep politics out of this, we'll have no problem between religion and science working things out. At least those are my hopes for the year," Gill says. "Maybe this can be a step in the direction of correcting things, getting a little balance back in the picture and having reason reign once again."
A Real Go-Getter

The young Edwards Campus is on the fast track in Kansas City, where professionals turn to KU for extra career credentials

BY MEGAN MACIEJOWSKI
There was a time when a college degree all but guaranteed lifelong employment with a single company. Today, says Bob Clark, dean of the University's Edwards Campus, the best one can hope for is lifelong employability.

"An undergraduate degree is absolutely the best foundation you can have," Clark says, "but it's not likely that it will be the last educational program you'll need."

Clark's observation helps explain the recent surge of graduate students swarming across the Edwards Campus in the past five years. Enrollment at the Overland Park campus has increased by 50 percent and is expected to continue on a similar arc. The growing demand for a well-educated work force, combined with a population shift to the southern part of Kansas City's metro area, place the Edwards Campus on firm ground for prolonged prosperity.

"As a university, we definitely have a role in the professional world," Clark says. "We want to merge the excitement of discovery with the demands of practice."

To fulfill Clark's goals, the campus' first priority is expansion. The Edwards Campus is situated on 15 acres of prime real estate on Quivira Road. Although there is currently only one building, plans call for at least two more, with financial backing from private donors. Although the site was previously known as the Regents Center, a deliberate public relations effort is changing the identification to Edwards Campus, reflecting the idea that it is a location evolving to serve its growing market. The Edwards Campus offers 16 graduate degree programs, including both master's and doctoral course work. Classes are taught by full-time KU faculty from Lawrence. As it is, Clark says, there simply isn't enough space to meet the needs of Kansas City's eager professional community.

"It's a great problem to have," Clark says. "I'm certainly not complaining. But we need to be able to respond to the community's need."

The Kansas City community has certainly responded to KU. Despite competition from 13 other metropolitan universities that also serve Kansas City's adult population, the Edwards Campus has thrived, Clark explains, because of KU's reputation. Indeed, in a city that boasts more than 36,000 KU graduates, there is genuine potential for the expansion of a partnership between business and higher education, a partnership that Clark says will help both the Kansas City economy and the University. He explains that by investing in education, companies and employees are investing in their own success. In turn, successful KU graduates help bolster the reputation of the University.

"We have a real opportunity to be the ambassador of high-quality education to Kansas City," Clark says. "KU's role in Kansas City is a vital component in the development of the University."

Chancellor Robert E. Hemenway agrees, acknowledging that KU owes something to the city where more KU graduates live than anywhere else in the country. The fates of the city and the University, he says, are intertwined.

"The Edwards Campus is a part of that overall responsibility that KU is increasingly recognizing and is going to increasingly fulfill as the research and graduate degree institution for the greater Kansas City area," Hemenway says.
families with school, as many Edwards Campus students do, matters of time and money are crucial. Their education is serious business.

The Doctor

Don Belzito, division director of dermatology at KU Medical Center, is familiar with serious business. He considers medicine perhaps the biggest business of all. In an effort to understand the financial and logistical aspects of his chosen field, he returned to school in June 1996 at the age of 46, seeking his master’s in business administration. Belzito explains that because of fundamental changes in the way medicine is being practiced, there is a premium on physicians who can bridge the gap between medical and corporate worlds in what is becoming an era of medical revolution.

“Essentially, medicine has become a big business,” Belzito says. “When I went to school it wasn’t. I had never even taken a basic economics class. For so long, through the golden age of medicine, there was no thought as to the cost of medical care. There was no incentive to be efficient with money without compromising care. Today it’s vital to understand the intricacies of the business so decisions about medicine can be made by people who know about medicine.”

His studies and his experience have taught Belzito that the mindsets of medical students and businessmen are different. While the medical student traditionally is not worried about cost, he says, the businessman’s ultimate goal is always to increase profit. He says both sides can be somewhat blinded. As Belzito sees it, common ground can only be reached through education.

Belzito points out that the classes he has taken for his MBA directly influenced his professional approach. He earned his undergraduate degree at Georgetown and attended medical school at Cornell, and he thinks the MBA program at the Edwards Campus is equally valuable. He cites human resource management and accounting as two classes whose lessons he already has put into practice.

While the sacrifices have been numerous, Belzito says the professors’ commitment and flexibility create an ideal environment for working adults.

“You just sleep a little less and have a very supportive family,” Belzito replies when asked how he manages his hectic life. “If you’re married, have a good talk with your spouse. In many ways, the spouse makes more sacrifices. Whereas I get personally rewarded for my efforts, she gets more work. It’s important that you’re both committed.”

Belzito clearly is committed, and by the end of the summer he’ll have his MBA to show for it. He stresses that earning another graduate degree has provided a complement to his previous education and experience, not a career change.

“My goal in getting my MBA isn’t to give up medicine,” Belzito says. “I’m after being a better physician and being a positive contributor to the medical revolution.”

The Mother

Debbi Swirczynski understands how 24 hours can seem too few to fit everything scheduled into a day. At 47, she is a wife, a mother of four and a research assistant in a hospital. She also is pursuing a master’s degree in communication studies.

“It can be very crazy,” Swirczynski says. “But I live for class. I love the interaction between the students and the professors.”

Swirczynski’s journey to graduate school has been a long one, peppered
with marriage, children, jobs and frustration at the unavailability of truly rewarding work. She graduated from Washburn University and was soon married. After working as a publications coordinator for four years, Swirczynski chose to become a full-time mother. When she decided to return to the work force, she found that her degree and work experience were not only outdated, but also limited.

"Everything had changed so much since the last time I worked, especially the technology," Swirczynski says. "More than that, though, my degree didn't address the things I was really interested in. My interests have evolved through the years, and now I'm catering my course work to those interests and the skills and talents I have."

Swirczynski's main interest is in organizational communication, in the barriers that prevent communication and the ways in which information travels. Her focus is on excels in the classroom and welcomes the possibilities of what her new degree will create.

"Work itself is an education that's enhanced by school," she says. "But going to school has given me the confidence to think on my own and take risks. It's given me the freedom to explore my options."

Swirczynski hopes that her degree, which will be completed after she finishes her thesis this semester, will allow her to find a position that offers autonomy and passion. Regardless of her future, however, Swirczynski is sure that her efforts in school have also complemented the many other aspects of her life.

"By my action and my behavior," she says, "I'm showing my kids the value of education."

The Military Man

Like Belsito and Swirczynski, John Keeter is looking toward the future. Keeter, 33, is a husband, a father of two, and an active-duty captain working toward a master's degree in engineering management. A career officer, Keeter serves as an operations research analyst for the U.S. Army. His duties include analyzing combat modeling and linear programming to provide senior military officials insights on new defense systems.

"I'm shooting for the 20-year mark of military service," Keeter says. "After that, I'll be starting a new career, and I want to be prepared."

Keeter says the engineering management program at the Edwards Campus provides much-needed lessons in teamwork and leadership. He thinks that many traditional undergraduate engineering programs provide the basis for entry-level jobs but neglect to prepare students for managerial roles they will eventually assume. By nature, he says, most engineers have technical skills, but lack the natural ability to command a meeting or lead a large group.

"With the exception of ROTC classes, I never had leadership training as an undergraduate," says Keeter, who graduated from the University of South Carolina and has done graduate work at both Louisville and Kansas State. "You need the opportunity to lead to learn."

Keeter also finds that his financial management classes apply directly to both his work and personal life, and he says this easy translation to real life is a strength of KU's program.

"The learning process here facilitates using your imagination and helps you become a better problem solver," Keeter says. While Keeter's eyes may be on his future, his current responsibilities still loom large. Every three to four months he travels to Korea to perform simulation analysis for the joint forces of the military. His demanding career requires Keeter to use videotapes of class and notes posted on the Internet to keep up.

"It's important to develop a rapport with the professors and let them know what's going on in your life," Keeter says. "They understand that for the student here, your job is your priority."

The Future

The first priority for the Edwards Campus always will be to fulfill the needs of the Kansas City community. Some of Dean Bob Clark's goals include developing undergraduate partnerships, possibly with Johnson County Community College, that focus on science, business and technology. He also would like to create a liberal arts degree-completion program and add more graduate degrees. The opportunities, as well as the demands, seem to be boundless.

For now, however, there is that problem of space. —

For more information, contact the Edwards Campus at 913-897-8400 or visit its website at http://vision.rc.ukans.edu.
Alumni Events

Adams Alumni Center

Reservations are required for all special events.
Call 785-864-4760

March
9
- Learned Club Tasting Society—White Meritage, 7:30 p.m., $25

22-27
- Learned Club closed for Spring Break

April
4
- Easter Buffet—10 a.m.-2 p.m., $18.50; children's menu, including entree, dessert and beverage, $2.75. Special appearance by the Easter Bunny

10
- Learned & Lied—Itzhak Perlman, 5 p.m. dinner, 8 p.m. show. $60 dinner and show, $30 dinner only

16
- Learned Club Tasting Society—Pinot Noir, 7:30 p.m., $25

May
9
- Mother's Day Buffet—10 a.m.-2 p.m., $18.50. Children's menu, including entree, dessert and beverage, $2.75

11
- Student Alumni Association—Finals banquet, 5:30-8 p.m., free to student members

23
- Commencement Brunch and Buffet—Brunch 10 a.m.-2 p.m., $15.75; Buffet 5 p.m., $18.75

Chapters & Professional Societies

If no local contact is listed, call Kirk Cerny at 785-864-4760

March
- Tournament Watch Parties—Alumni Association chapters will meet throughout the men's and women's basketball tournaments for TV watch parties. Consult your TV Guide to Jayhawk Basketball, provided in issue No. 6, for official watch sites near you, or call us at 1-800-KU HAWKS for locations and events in your area. Every game will also be shown on televisions in the Learned Club's Seymour Pub, with pregame drink specials.

April
1
- Young Jayhawk Network: Big Blue Monday and basketball reunion at Johnny's Tavern in Overland Park, 6 p.m.

4-6
- Big XII Tournament: Alumni pep rallies at the big tent outside the Golden Ox restaurant beginning two and a half hours before each game.

1949 Reunion
April 23-24

Members of the Gold Medal Club will gather Saturday, April 24 for a 10:30 a.m. brunch and program. All alumni from classes preceding 1949 are invited to attend. If you did not attend your 50th class reunion to receive your Gold Medal Club pin, please let us know in advance and we will present your special pin and citation as part of the brunch program.

The 1949 class dinner begins at 6 p.m. Friday, April 23, with a cocktail reception. On Saturday, the class will be inducted into the Gold Medal Club at a special 12:30 p.m. pinning luncheon.

If you have not yet received a reunion announcement and registration card, please contact Janice Cordry at 785-864-4760. Hotel reservations are also available.

Nesting instincts

Kansas City Jayhawks returned to the roost, sending KU spirit soaring at the fourth annual Rock Chalk Ball

Alumni lifted the KU chorus—and raised the roof—at the Rock Chalk Ball Feb. 5, when nearly 1,000 partiers packed the ballroom of the Hyatt Regency-Crown Center in Kansas City, Mo., to celebrate the University in the nation’s largest KU community.

“The highlight for me,” says co-chair Debra Radke Hannah, b’80, “was seeing such a variety of Jayhawks of all different age groups, including young graduates. There were people I knew in school—and people I’ve known in Kansas City who I didn’t know were Jayhawks. It was a great time to renew connections.”

Hannah and co-chair Renny Christian Arensberg, c’79, directed nearly 175 volunteers from the Association’s Greater Kansas City Alumni Chapter. The ball drew support from 50 corporate and individual benefactors and 150 donors to the silent and live auctions.

The event’s theme, “Return to the Roost,” inspired students and alumni of the School of Fine Arts to create birdhouses that adorned the ballroom. Along with the event’s signature roost, “Hollow-Legged Homecoming” by Steve Mayse, g’79, more than 30 other flights of fancy drew effusive commentary through the evening—and generous bids during a silent auction.

Proceeds from the ball, which were still

(Clockwise from left)

Co-chairs Debra Radke Hannah and Renny Christian Arensberg directed a volunteer corps of nearly 175 Kansas City area alumni;

Honorary Chairs Barbara Mills Adam and Jim Adam say a particular highlight of the ball is the growing participation of younger alumni; Gary Bender, master of ceremonies, huddled with Coach Terry Allen and his wife, Lynn, on-stage before auctioning a trip to Colorado for the Jayhawks’ game against the Buffaloes next fall; alumni danced the night away to the music of the Atlantic Express; alumni and students of the School of Fine Arts created whimsical KU birdhouses to carry out the “Return to the Roost” theme.
being tallied as Kansas Alumni went to press, benefit the Alumni Association's Rock Chalk Society for Academic Excellence endowed fund at the KU Endowment Association. The fund currently provides four scholarships to National Merit Scholars at KU. During the ball, Chancellor Robert E. Hemenway, who aims to increase the number of new National Merit Scholars who come to KU each year, introduced the two newest Rock Chalk Scholars, Chris Adams of Leawood and Jennifer Blackwell of Kansas City, Kan., who thanked their fellow Kansas City Jayhawks for giving them extra incentive to choose KU.

Students also were integral to staging the ball itself. Fifty student volunteers representing the Student Alumni Association assisted with the silent and live auctions and numerous other tasks throughout the evening.

"I’ve heard nothing but praise for the hard work and the spirit of the students," says Michon Lickteig Quick, ’85, the Association's director of Rock Chalk Society and Greater Kansas City programs. "Alumni truly appreciate the students' presence; they are a tangible connection to the campus and their alma mater."

Tell us about those who have been true to KU

And the nominees are: whoever you think worthy of being honored with the 1999 Fred Ellsworth Medallion, the Alumni Association's highest award for unique and significant service to the University.

The deadline for nominations is March 31. Ellsworth recipients will be chosen by representatives of the Alumni, Athletics and Endowment associations and the Office of the Chancellor.

The committee will review the nominees' KU service throughout their lives, rather than single events or activities.

To make a nomination, send a list of the candidate's achievements and provide biographical materials, such as newspaper clippings. The committee will consider non-alumni.

Please resubmit on past nominees and include appropriate updates.

Send nomination materials to Fred B. Williams, president, Kansas Alumni Association, 1266 Oread Ave., Lawrence, KS 66044-3169.

New senior finance man knows Association's books

John Sanders and Dwight Parman have tended the Alumni Association's finances in tandem for the past six years—Sanders on a daily basis as senior vice president for finance and treasurer, and Parman as audit manager and earlier as audit senior for Mize Houser, the regional accounting firm that audits the Association's books.

So when Sanders retired Feb. 5, three days after his 65th birthday and 13 years after joining the Association staff, it made good sense for Parman to step in as senior
vice president. Parman had worked for Mize Houser for more than 10 years.

A committee composed of Fred Williams, Association president, and current and former members of the Association’s Audit and Finance committees selected Parman after a national search.

Parman, who as an auditor worked with Association staff several weeks each year, predicts a smooth transition. "I had grown to know the people here," he says. "They’re good people and I knew I could work with them. I’m already familiar with the big picture and many of the details."

The detail man was Sanders, known for his well-stocked office jellybean machine and his knack for talking numbers in no-nonsense terms. In meetings he could steer a group through financial statements so steadily that even wandering minds stayed on course.

Sanders in turn credits the work of his staff, Susan Burton, accountant; Rachel Purdy, accounting clerk; and Ann Nichols, former longtime accounting clerk.

A native of Hannibal, Mo., who discreetly hid his Missouri Tiger stripes, Sanders confesses a certain fondness for Jayhawks. "I’ve worked with a great bunch of people here and elsewhere on the Hill," he says. "And the people like our Board members and other volunteers who come back to the Hill really work hard for KU. I’ve made a lot of friends."

Sanders also has seen a lot of growth in Association finances through the years. The organization’s operating budget totaled $2.3 million when he came to the Association Jan. 1, 1986, after retiring from a career of more than 30 years with the regional accounting firm then known as Grant Thornton. Today the Association’s budget is nearly $4 million.

Sanders’ family grew as well during the ’80s and ’90s, adding three granddaughters, Chelsi, Christa and Kacie, who are his pride and joy. Their gymnastics meets and piano and dance recitals are at the top of his retirement agenda, along with travel with his wife, Erma. He also plans to resume his volunteer activities in the Topeka area; he and Erma are longtime Tecumseh residents.

Parman, a Topeka native, admits he’s the exception to his family’s KU tradition. He studied liberal arts and economics while earning his bachelor’s degree at Grinnell College in Iowa, where he ran cross country, then returned to Topeka to complete another bachelor’s in accounting from Washburn University. He and his wife, Lisa, and their daughter, Camille, live in Topeka.

After working with a variety of client companies during his years in auditing, Parman says he is eager to narrow his focus to one firm’s finances.

And, taking a cue from his predecessor, Parman will try to sweeten the straight talk about money matters. On his office credenza, in the spot formerly occupied by Sanders’ jellybean machine, sits a jar filled with Tootsie Rolls.

---

**See Rome in a new millennium**

**Join the Flying Jayhawks for a Grand Millennium Experience in the Eternal City**

**DEC. 26, 1999 - JAN. 3, 2000**

Surround yourself for seven nights in the decadent luxury of the world-class, five-star Excelsior Hotel, wonderfully located on fashionable Via Veneto. Your fabulous week includes a New Year’s Eve Gala befitting the Excelsior’s exquisite reputation, and reserved seating at the Millennium New Year’s Day Papal Mass at St. Peter’s Basilica. The price for this once-in-a-lifetime adventure is $9,495 per person.

**Call 1-800-KUHAWKS (584-2957)**

for reservations or additional information. See our complete 1999 Flying Jayhawks Trips Itinerary at www.ukans.edu/-kualumni
1920s
Edith White Butcher, c'20, turned 100 last Sept. 25. She lives in Ardmore, Okla., with her daughter, Jocelyn Markley.
Margaret Brown Goolsby, c'23, celebrated her 97th birthday last October. She lives in Idabel, Okla.
Allen Harmon, 25, recently was honored as an emeritus member of the Associated General Contractors of Oklahoma. He lives in Oklahoma City.
Cheney Prouty, b'29, celebrated his 92nd birthday last September. He makes his home in San Antonio.

1930s
Alpha, b'32, and Eleanor Higgins Carter, c'34, live in Phoenix and enjoy a family of eight children, 22 grandchildren and 30 great-grandchildren.
Sylvia Burdette Dean, f'33, teaches watercolor painting to senior citizens in Washington, D.C.
Kenneth Hamilton, b'39, f'47, recently was elected to the board of Valley Bank in Henderson, Nev. He lives in La Jolla, Calif.
Hilda Hyott, c'36, m'47, lives in Los Angeles, where she enjoys gardening and corresponding with pen pals.
Burrell Landes, b'37, former vice president of Adams Business Forms, continues to make his home in Topeka with his wife, Vera.
Lida Holmes Mattman, c'33, g'34, works at Nelson Medical Research Institute in Grosse Pointe, Mich.
Eugene Miller, b'38, a former market researcher, makes his home in Houston.
Louise Eivston Sands Olmstead, c'35, lives in Arlington, Va., where she's active in several civic organizations.
Ethel Childers Patterson, c'30, spends her summers in Alaska and her winters in Austin, Texas. Ethel will be 92 in June.
Norman Preble, c'36, and his wife, Josephine, will celebrate their 60th anniversary this year. They live in Port Charlotte, Fla., where Norman's a retired college teacher.
Kay Eustace Thomas, c'36, recently received the Orah Ashley Lamke Distinguished Alumni Award from the Portland alumni chapter of Mu Phi Epsilon. She lives in Portland, where she taught piano and was a church organist for many years.
Catherine Kannapel Wasterhaus, c'34, a retired social worker, continues to visit home-bound people and residents of nursing homes in Newton. She was named 1998 Woman of the Year by the American Biographical Institute.

1940
William Davis, c'40, lives in Southern Hills Retirement Community in Tulsa, Okla., with his wife, Hesper.
Stanley Friesen, c'40, m'43, makes his home in Prairie Village.
Howard Garrett, c'40, is community services manager and treasurer of Shawnee Cemetery. He lives in Shawnee Mission.

1941
William Foster, c'41, former band director at Florida A&M University, was featured last year on a segment of the "Today" show. He and his wife, Mary, assoc., live in Tallahassee.
Gaylord Manahan, c'41, m'44, lives in Lawrence with his wife, Brenda. His hobby is growing bonsai trees.
Joe Van Sickle, d'41, and his wife, Marylee, live in Givens Estates Methodist Community in Asheville, N.C.

1942
Eileen Martin Botinelly, f'42, is a resident of Lakewood, Colo.
Joe Gregory, b'42, f'49, lives in Fort Scott.
Julien LePage, b'42, took a cruise around Iceland and Greenland last year and visited Switzerland, Italy and Germany. He lives in Missoula, Mont., and plans to visit Australia and New Zealand this year.
Alice Brown Martin, f'42, and her husband, Glen, m'49, continue to make their home in Wichita, where he's a retired physician.

1943
Betty King Ball, n'43, and her husband, George, are retired in Orlando, Fla., where they enjoy tennis, yard work and community service.
James Chandler, c'43, g'49, teaches bridge in Richmond Heights, Mo., and is president of the Richmond Heights Senior Citizens Club.

1946
Jack Illger, c'46, is a retired district manager for Otis Elevator. He and his wife, Donna, live in Sun City, Ariz.
Wendell, c'46, m'60, and Waitstill Ashbaugh Nickell, '49, returned to the Alpha Nu chapter of the Alpha Phi Pi. They live in Salina.

1947
Norman Smith, b'47, and his wife, Lilian, divide their time between homes in Honolulu, Hawaii, and Tacoma, Wash.

1948
Gerald Jensen, '48, retired from his pediatrics practice last year and is full-time organist and choir master at All Saints Episcopal Church in Meriden, Conn. He lives in Bristol.
Robert Pennington, c'48, f'50, a retired attorney, and his wife, Nina, make their home in Mesa, Ariz.
Charles Schuler, e'48, keeps busy during retirement with golf, duplicate bridge and volunteer work. He and his wife, Rose, live in Eureka Springs, Ark.

John Sells, e'48, g'53, and his wife, Nancy, are regional coordinators of the Aplastic Anemia Foundation of California. They live in Van Nuys.

Harry Williford, b'48, works at the National Institute of Aviation Research at Wichita State University. He's also a trustee of the Kansas Aviation Museum.

1949
Hugh Gillin, c'49, and his wife, Janet, make their home in San Diego.

Richard Harrington, c'49, retired regional director of the Boy Scouts of America, is a resident of San Jose, Calif.

Charles Johnson, c'49, g'51, lives in McPherson with his wife, Lucy. He's a retired attorney and oil and gas operator.

Charles, '49, and Ivy Flora Marsh, '50, celebrated their 50th anniversary last June with their five children and 12 grandchildren. They live in Salina.

1950
Robert Bell, c'50, d'53, lives in Seattle. He recently retired from the Washington Department of Social and Health Services.

Marion Bishop, g'50, recently received the Max Chepluv Medal from the New York State Academy of Family Physicians. He directs graduate programs in the department of family and preventive medicine at the University of Utah in Salt Lake City.

Fred Doornbos, d'50, m'57, retired last year after practicing medicine for 40 years. He lives in Iowa City, Iowa.

John Gurtner Jr., e'50, lives in Bellevue, Wash., where he's retired after a career with Boeing.

Kathryn "Kitty" Walter Lamb, f'50, teaches part time at Augusta (Ga.) State University.

Martha Cannon Relph, d'50, is a resident of Madison.

Bryan, d'50, g'55, and Reita Hinkel Sperry, s'53, make their home in Pittsburg. He's a retired teacher.

Mary Lucas Winney, f'50, recently returned to her home in El Dorado Springs, Mo., after recovering from a stroke.

Spencer, b'50, f'54, and Betty Foster Yohe, d'51, celebrated their 50th anniversary in January. They live in Villa Park, Calif.

James Young, d'50, g'52, Ph.D '71, a retired Washburn University professor, continues to make his home in Topeka.

1951
Neil Arasmith, c'51, retired after 40 years in the consumer credit business, makes his home in Phillipsburg.

Andrew Berry, c'51, lives in King City, Ore., where he's retired director of ancillary services for Providence Hospital in Portland.

Jack Dalton, c'51, f'53, lives in Dodge City with his wife, Jane, assoc. She was named the 1998 Dodge City Woman of the Year.

Yvonne Settle Sheaffer, c'51, and her husband, Bob, are retired NASA programmers. They live in Florence, Ore., and Yvonne recently became a life master in the American Contract Bridge League.

1952
Lyle Hampton, c'52, and his wife, Pat, live in La Jolla, Calif., where they've recently retired.

Richard Klempnauer, c'52, m'55, continues to practice medicine in Midland, Texas, where he and his wife, Beverly, make their home.

Kerwin Koerper, c'52, is president of Koerper & Co. in Scottsdale, Ariz.

Darwin Lewis, e'52, keeps busy during retirement with golf, volunteer work and visiting family members. He and his wife, Peggy, live in St. Louis.

Eugene, e'52, and Dina Gaskell Stucker, e'54, recently returned to Houston after spending a year abroad traveling by bicycle. Their trip included five months touring New Zealand.

1953
Robert Campbell, Ph.D'53, former interim president of Sterling College, continues to make his home in Sterling with his wife, Eloise.

Esther Storer Utchen, c'53, a retired employee of Bell Labs, has moved to San Ramon, Calif.

1954
Robert Ball, c'54, continues to make his home in Austin, Texas.

Barbara Trotter Herlan, c'54, teaches at Biblical Resources in Jerusalem, Israel.

Ronald Liggett, b'54, retired last year as comptroller of Talco Equipment. He and his wife, Sylvia, live in Rosemount, Minn.

Frank Newby, c'54, Ph.D'64, and his wife, Julie, spent three weeks in Taiwan and China last year. They live in Johnson City, Tenn.

William Patterson, c'54, retired recently as a professor of French and Linguistics at Texas Tech University in Lubbock.

Katharine "Ninia" Pearson Bickford Smith, n'54, a retired professor, makes her home in El Dorado.

1955
Hal Berkley, b'55, retired last year after 43 years at the Bank of Tescott. He and Eleanor Christenson Berkley, assoc., continue to live in Tescott.

Kenneth Crawford, b'55, lives in West Hills, Calif.

Paul Dohl, m'55, a retired pediatrician, makes his home in Sherman Oaks, Calif.

Charles Powell, p'55, sold his pharmacy last year. He and Ruthanna "Nan" Charles Powell, d'53, live in Columbia, Md.

1956
Rocelyn Roney Lonborg, n'56, g'75, Ph.D'89, runs a consulting business, Health Systems Assessment, in Camano Island, Wash.

1957
Thomas Clevenger, b'57, serves on the boards of Western Resources and Security Benefit Group. He lives in Wichita.

Donna Hardman Hallowell, n'57, teaches obstetrical clinics and works at Lutheran Medical Center. She lives in Wheat Ridge, Colo., with her husband, John Anthony.

John Ryberg, c'57, is regional vice president of St. Francis Academy, a non-profit national organization serving at-risk youth and their families. He lives in Salina.

Ange Butler Stalcup, d'57, h'81, received the 1998 Fieldwork Educator of the Year Award from the Heartland Occupational Therapy Fieldwork Alliance. She's an occupational therapist at the KU Medical Center in Kansas City and makes her home in Lawrence.

Lise Wertheimer Wallach, Ph.D'57, is a professor of psychology at Duke University in Durham, N.C.

Beverly Presnell Witaker, c'57, keeps busy with volunteer work and traveling. She lives in Mars Hill, N.C.
MCDONALD'S MARKETER TRAVELS THE WORLD

Teddi Bankes Domann parlayed two communications degrees and her love for organizing community events into a thriving sports marketing career—then super-sized it into a job as director of global sports marketing for McDonald's.

The energetic Domann, '85, c'85, joined the Oak Brook, Ill., company in 1993, counseling marketing executives in more than 80 countries on how to make the most of the corporation's sponsorship of World Cup soccer events and the Olympic games.

Under her guidance, French franchises wanting to inculcate McDonald's into the local culture created a campaign that incorporated World Cup-themed Happy Meals featuring Dannon Yogurt drinks in collectible containers. Swiss franchises striving for hipper images and younger customers showcased Olympic snowboarding champions.

Domann first became professionally acquainted with McDonald's while working for the company as a consultant through her employment with advertising and event-marketing firms in Kansas City and Washington, D.C.

During her time with McDonald's, Domann, 35, has developed an ability to sleep on airplanes and an appetite for double cheeseburgers. She has also forged lasting friendships with Olympians Mary Lou Retton and Jackie Joyner-Kersee.

Acknowledging that a career demanding travel to more countries than she can easily recount could be "all consuming," Domann diligently strives for balance by playing with her children, compiling family scrapbooks and teaching step aerobics when she's at home in Chicago. For international trips spanning more than a week, she tries to take Rylee, 3, and Johansen, 1, along.

Like most working parents, Domann and her husband, Craig, b'85, a sports agent and attorney originally from Atchison, frequently handle more balls than those tossed by children at a McDonald's Playland birthday party. Naturally, the Domanns look for shortcuts such as buying food at one of the ubiquitous golden-arched restaurants.

"My children have quite a collection of Happy Meal toys," Domann jokes.

Despite a frenetic schedule that includes caring for 3-year-old daughter Rylee, 17-month-old son Johansen, and son Brock, born last November, Domann reflects on the philosophy of a refrigerator magnet that reminds her daily, "Life is more than working for perishable food alone."

Although she enjoys appetizing career condiments like traveling abroad and meeting celebrities, Domann is emphatic about where she derives the "extra value" in her life.

"My husband and I have both been blessed with stimulating careers," Domann says, "but we cherish our family time together the most."

—Gronniger, g'83, is a frequent contributor to Kansas Alumni.
Stuart Smith, c’60, m’64, continues to practice medicine part time in Rome, Ga., where he and Anita Schmitt Smith, assoc., make their home.

Ben Throne, c’60, m’64, retired last year as director of radiation oncology at Research Medical Center in Kansas City. He and Esther Cone Throne, ’83, recently moved to Gig Harbor, Wash.

Stanley Vermillion, c’60, m’64, is a physician with the East Tennessee Medical Association in Johnson City. He lives in Gray.

Judith Thomas Voran, c’60, retired last year after 36 years as a high-school teacher and librarian and as a graduate faculty member at Arizona State University. She lives in Glendale, where she continues to breed boxers and judge dog shows for the American Kennel Club.

**MARRIED**

Charlotte Heinlein Underwood, f’60, to Joe Harber, Oct. 10. They live in Belton, Mo.

1961

Bruce Barrett, c’61, is a professor of physics at the University of Arizona in Tucson. He recently completed a sabbatical, which he spent researching theoretical nuclear physics at universities in Europe, Japan, and Australia.

Donald Coffman, e’61, retired maintenance manager for Phillips Petroleum, makes his home in Phoenix.

Alfred Dietz, d’61, recently returned from Argentina, where he was studying honey bees. He’s lives in High Shoals, Ga., and is a retired professor of entomology.

Walter Dyck, m’61, is associate vice president for clinical affairs and senior associate dean at the Texas A&M University Health Science Center in Temple.

Howard Ellington, a’61, owns an architecture firm in Wichita and is executive director of the Wichita Center for the Arts.

Robert Hinton, e’61, works as a senior engineer at Bechtel Corp. in Houston, where he and his wife, Marian, make their home.

Harrison “Ace” Johnson Jr., ’61, runs Glenncliff Farm Bed and Breakfast in Independence.

John Mischlich, a’61, lives in Kansas City, where he’s retired from Burns & McDonnell.

Richard Olmstead, c’61, is a principal software engineer at Lockheed Martin in Sunnyvale, Calif. He lives in San Jose.

Edward Zeigler, b’61, does membership and management consulting part time in Woodland, Wash., and studies traditional Chinese medicine at Bastyr in Seattle.

1962

Jane Blair, c’62, continues to make her home in Mount Shasta, Calif.

William Campbell, a’62, a retired DuPont construction manager, lives in New Bern, N.C., with Claire Porter Campbell, assoc. He keeps busy with golf and bridge.

Marcia Casey Cushmore, c’62, had a woman art show last fall. She lives in Minneapolis, Minn., and works in bronze, paint, photography and mixed media.

Sara Maxwell, c’62, works as a psychotherapist in Seattle, where she’s also a certified employee assistance professional for the state of Washington.

Maurice Smith, c’62, is president of MMS Consulting in Pasadena, Calif., where he and Georgene, assoc., make their home.

Evan Tonsing, f’62, g’67, lives in Glencoe, Okla., where he’s retired after teaching cello at Oklahoma State University in Stillwater.

1963

Sally Henneman Baird, d’63, g’66, works as a design consultant for Norwalk in Wichita, where she and her husband, Jon, b’66, live. The Rev. Sara Chandler, f’63, is rector at St. Margaret’s Episcopal Church in Woodbridge, Va. She lives in Occoquan.

John, c’63, g’67, and Sharon Koch Light, d’66, recently moved to San Diego, where John’s executive vice president and general counsel of Sempra Energy.

Mary Warburton Norfleet, d’63, g’65, is a clinical professor of psychiatry at Stanford University in Stanford, Calif. She lives in Palo Alto.

1964

Charles Bassett, Ph.D.’64, retired recently as a professor of English and American studies at Colby College in Waterville, Maine, where he’s taught for 30 years. The college’s annual teaching award has been named for him.

Eugene Denton, g’64, retired last fall as Johnson County administrator. He lives in Overland Park.

Marlon Ellison, Ph.D.’64, a retired professor of marine biology at Tampa University, continues to make his home in Tampa, Fla.

John Foulston, c’64, g’66, is a partner in the Wichita law firm of Foulston, Conlee, Schmidt & Emerson.

William Hollweg, g’66, keeps busy during retirement with travel, golf and fishing. He lives in Midland, Texas.

Charley Kempthorne, d’64, g’66, and his wife, June, recently reorganized their business as a nonprofit firm, Lifestory Institute, which helps people write their family history. They live in Manhattan.

Keith Kreutziger, ’64, recently became associate chair of the department of otolaryngology at the Ochsner Medical Institution in New Orleans. He lives in Metairie.

Clark Lacy, g’64, retired from teaching last year. He lives in Cheyenne, Wyo.

Cordell Meeks Jr., c’64, f’67, serves on the steering committee of Partnership for Children, which focuses on youth problems in Kansas City. He is also a past chairman and current Executive Committee member of the Alumni Association’s Board of Directors.

Celia Archambault Michener, c’64, is a self-employed computer consultant in Evanston, Ill.

Susan Reiff, d’64, lives in Overland Park, where she’s president of Roanoke Village Shopping Center.

1965

R.L. Clancy, Ph.D.’65, is a professor of physiology at KU Medical Center in Kansas City.

Janet Hunter Woerner, d’65, Ph.D.’84, a professor of education at California State University in San Bernardino, makes her home in Yucaipa.

1966

Charles Frickey, d’66, f’69, serves as mayor of Oberlin and president and chairman of Farmers National Bank.

Janice Sutton Pierce, c’66, is administrative manager of the psychology department at Stanford University. She lives in Mountain View, Calif.

Michael Shannon, ’66, practices pediatrics in Laguna Hills, Calif., where he and his wife, Vera, make their home.

Suzanne Falk Tuggle, d’66, is a partner in Just Us in Concordia.

Harry Winkler, b’67, f’72, practices law in Madison, Ga. He lives in Buckhead.

1967

Gaylene Bouska Alman, n’67, directs the nursing learning lab at the University of Washington-Seattle. She co-authored Nursing Skills, which will be released this summer.

Wayne Campbell, b’67, g’68, is marketing director for Florida MTC in Largo. He lives in Palm Harbor.

Suzanne “Taylor” Corpron Stephens, n’67, runs Taylor’s Treats, a vending business in Fort Worth, Texas.

William Tanner, g’67, Ph.D.’71, retired recently after teaching history at Humboldt State University for 28 years. He and his wife, Frances, live in Arcata, Calif.

Connie Jones Welsh, d’67, Ph.D.’89, is superintendent of the Wichita Falls (Texas) Independent School District.
1968
Patricia Maloy All, d'68, g'77, EdD'86, is assistant superintendent of the Olathe public schools.
Patricia Alloway Clement, c'68, directs the Pittsburg Public Library.
Kathie Phillips Dove, d'68, g'71, recently became an account executive for Archway Consultants, a San Francisco information technology consulting firm. She lives in Lafayette.

Ronald Yates, j'69, heads the journalism department at the University of Illinois in Urbana.

EVEN ANARCHY CAN'T DIM TRAVEL MEMORIES

When Kathleen Stolle moved into Oliver Hall the day before freshman classes began, she saw both the campus and the city of Lawrence for the first time, despite growing up just 40 miles away in Silver Lake. Today the former Peace Corps volunteer grimaces at the recollection and credits a University study program in Costa Rica for cultivating the wanderlust that has since taken her to 23 countries.

Forgoing corporate America, Stolle, j'92, says her international adventures have enriched her more than merit raises and stock options, providing her a sense of purpose she didn't possess at Commencement.

For three years, Stolle taught English to Albanian and Moroccan students. Toward the end of her two-year Albanian tour, in 1997, anarchy erupted and Peace Corps volunteers were airlifted out of the country. Stolle stuffed her film negatives, two journals and a sleeping bag into her backpack and quickly advised an acquaintance on the disposition of her belongings.

"I later smacked my head about leaving some Albanian recipes, a handmade sweater and a J. Peterman mailbag I had treated myself to after a summer spent building tires at the Goodyear plant in Topeka," Stolle recalls wistfully.

The volunteers arrived in the country's capital, Tirana, where they spent an uneasy night with two unarmed security guards and the unsettling sound of gunfire.

"The next day we were bused to an embassy landing field amid juxtaposed images of gun-toting anarchists and ordinary citizens who waved and saluted us as we passed," Stolle says. "I bawled my eyes out."

Stolle accepted a second assignment in Rich, Morocco, where she taught gifted high-school students, enlivening classes with cultural discussions and explaining slang with a Moroccan colleague's copy of Honey, I Shrunk the Kids.

Although Stolle missed margaritas, Pop Tarts and pianos during her excursions abroad, she longed most of all for anonymity. Her outsider's status followed her everywhere, no matter how many friends she made or how earnestly she tried to assimilate.

"People want to stare at you and touch you and gossip about you," Stolle says. "You have every aspect of stardom except the money."

Stolle, who is currently pursuing a graduate degree in writing and publishing at Emerson College in Boston, has followed her heart and her instincts to achieve a personal definition of success based on an abundance of textured experiences.

"My teaching English helped some students, but what I learned about others and about myself far outweighs a few grammar lessons," Stolle says. "The experience opened my eyes to other people's circumstances."

LIFETIME OF LEARNING RINGS TRUE IN BOOK

His childhood was not that unusual. William Moore Gray III studied hard and was smart enough to find holes in his education, to linger over uncertainties that were not addressed by teachers or textbooks. Where Gray left the more traveled road, however, was his early determination to keep up the pursuit.

"I grew up with a lot of questions," Gray, b'41, says from his Chanute home. "And as I researched them, I put it all down on paper. I wanted to give my grandkids the answers that I had found. I've known all my life that this was what I was going to do."

After leaving the University with his business degree, Moore joined World War II as an infantry officer in Europe. He returned to Chanute to join the family business—wholesale plumbing and heating services supplied across much of mid-America—but never forgot the pledge he had made to himself.

When he liquidated the family business in 1981, Gray began researching the book he knew was in him. 10 years later, he emerged with Experiment in Liberty.

Subtitled "The First Five Hundred Years of Freedom in America," Gray's history—in most respects, an economic history—is a sweeping examination of the American experience from Columbus through the present day.

Although he is a self-taught historian and economist, it takes only a few pages to understand that his amateur perspective is a delight, and the reader quickly understands that Gray represents the best of this country: the intelligent citizen who cares enough to search out his own answers and is capable enough to share his well-written insights with others.

"I went into this suspecting that freedom was a big factor in what we are," Gray says, "but I was surprised when I finally understood the extent of that. I now feel it is virtually the only factor of major importance. If a man isn't free, he has no life.

"People in the United States are rich. Even the poor people are rich, compared with the rest of the world. When I was growing up, our teachers said that was because of our natural resources. But I came to understand that there are countries all over the world with greater natural resources. The difference is freedom."

True to his word, Gray published his thick book at home, generating a handful of copies to give to his family. But his sisters convinced Gray to publish privately, so he had 500 more copies printed.

One landed in the hands of a former Phi Kappa Psi fraternity brother, William Ellis, b'47. Ellis, a self-made success in the candy business, enjoyed the book so much that he provided financial support to see it properly published. The book was handsomely printed in 1998 by Sunflower University Press in Manhattan, and is now available through Borders and any bookstore willing to contact the Manhattan press.

"My writing," Gray says, "is my way of teaching the next generation, of leaving my thoughts to them."
1998 University of Kansas Collector Series Bank

Haz en Lee, d'60, 66, Sept. 10 in Lawrence. He is survived by his wife, Ruth Malue Lee, g'83; four daughters, two of whom are Amy, c'84, l'86, and Kelly Lee Seuell, c'90; a son, Scott, c'89; three stepsons; a sister; and 10 grandchildren.

Hazel Shirar McGee, d'60, 88, Aug. 16 in Denton, Texas. She lived in Flower Mound and was a former teacher and librarian. Surviving are two daughters, one of whom is Barbara McGee Lappin, c'59; a sister; a brother; five grandchildren; and five great-grandchildren.

Leslie Nesmith, c'62, m'66, 58, Nov. 4 in a private plane crash in Cowley County. He lived in Augusta and practiced ophthalmology in Wichita. He is survived by four sons, Trent, d'96, Seth, c'98, Luke, student, and Cade, student; two daughters, Brooke, c'93, f'97, and Brit, n'99; his mother, Norma Wallace Bee, c'39; a sister, Ida Nesmith Tilden, n'64; his stepmother; and a grandson.

Max Newell, g'69, 63, Oct. 10 in Joplin, Mo. He lived in Granby, and was a teacher at Crowder College in Neosho. He is survived by his wife, Jane Kirkpatrick Newell, f'70; two sons; two daughters; a sister, Marjorie Newell O'Reilly, d'51; and six grandchildren.

Sondra Slothower, c'64, Oct. 1 in Steamboat Springs, Colo. She lived in Oak Creek. Surviving are her mother, Marjorie, a sister and three brothers.

1980s
Richard Andrews, g'86, 50, July 28 on the Apache-Mescalero Indian Reservation near Ruidoso, N.M. He lived in Ottawa, where he was a professor of accounting and a faculty athletics representative at Ottawa University. He is survived by his wife, Delores, a son, his mother; two stepsons, five stepdaughters; a brother; a sister and several grandchildren.

Thomas Benton, b'87, 34, Nov. 12 in Lakewood, Colo. He was a financial planner for Galileo International and is survived by his parents; a sister, Becky Benton Weber; f'85; a brother; and his grandmother.

Deborah Pitts Butcher, b'80, 43, June 30 in Louisville, Ky., where she was a sales executive with AT&T. She is survived by her husband, John, c'75; a son; two daughters; her parents; two brothers, Harold Pitts, g'83, and Michael Pitts, b'83; and three sisters.

Virginia Paul Henderson, c'83, 51, Oct. 4 in Lawrence. Her mother and a sister survive.

Karleen Mingle Kerr, c'80, 60, Oct. 22 in Wichita, where she was a computer systems analyst. She is survived by her husband, Willard, four daughters, a brother and three grandchildren.

Susan Finkemeier Whitaker, c'82, 39, Oct. 7 in Kansas City. She is survived by her father; Theodore, e'53; her mother; and a brother, Roger, d'82, g'89.

The University Community
William Bell, 55, Oct. 17 in McLouth. He was a professor of entomology and former chair of the entomology department. He was former associate dean of research administration and had helped establish the Olin Petefish Award for Research Accomplishments in Basic Science. He is survived by his son, his parents, and a sister.

Daniel Ling Jr., 73, Aug. 21 in Spokane, Wash. He was a professor of physics from 1948 to 1987. Surviving are a daughter, Deborah Ling Stucky, f'71; a son, a sister; and six grandchildren.

Marian Hines McCorrill, b'81, 66, Dec. 10 in Lawrence. She was the administrative assistant for the president of the KU Endowment Association, where a memorial has been established in her name. She is survived by her husband, William; two daughters, Linda, b'86, and Laura, d'84; a brother; and a sister.

June Miller, '40, 81, Oct. 12 in Olathe. She was a professor and chair of the department of hearing and speech at the KU Medical Center. Several cousins survive.

Flora Chiarappa Silini, 75, July 27 in Lawrence, where she was a retired professor of piano. Surviving are a son, Robert Silipigni, c'77; and a brother.

Allan Woolard, '51, 87, Oct. 21 in Lawrence, where he was an assistant football coach and recruiting ambassador from 1979 to 1988. Earlier he had been head football coach and athletics director at Lawrence High School. He is survived by his wife, Jean Smith Woolard, j'70; a son, Mickey, d'75, g'98; and two grandchildren.

Associates
Florence Wilbert, 77, Sept. 11 in Pittsburg. She has been a clerk for the selective service board during World War II. Surviving are her husband, Paul, c'36, f'38; a son, Dennis, c'70, i'73; and a granddaughter.

School Codes Letters that follow names in Kansas Alumni indicate the school from which alumni earned degrees. Numbers show their class years.

KANSAS ALUMNI • NO. 2, 1999 | 33
The real world
Faculty immerse themselves in frontline business training with Farmland Institute

Even the most successful corporations can benefit from outside assistance. Farmland Industries Inc., the Kansas City-based cooperative whose sales totaled $8.8 billion in 1998, is no exception. So Farmland turned to the School of Business to help establish a management education program for the company’s middle managers.

“The global nature of our business demands innovative leadership,” says Levi Snow, acting interim director for Farmland’s development group. “KU has the resources and talents to help us develop our future leaders.”

The Farmland Leadership Institute, as the partnership is known, was founded to develop leadership skills among potential executives and is taught by Farmland executives and KU business professors, led by Professor Bill Beedles, who says the program benefits KU as well as Farmland.

“Being in the professional world is a major part of the learning experience,” Beedles says. “By involving ourselves in this program, we’re improving the quality of professionalism at the business school and making our overall teaching and research more relevant.”

KU was chosen over 12 other groups, including universities and consulting companies.

“It’s a big deal,” Beedles says. “The competition was tight.”

After Farmland chose KU last summer, six professors designated to lead specific programs within the institute spent the fall immersing themselves in the company and creating a custom program based on the needs they assessed. Their research became the framework for the Farmland Leadership Institute, whose inaugural class includes 29 Farmland employees. The 10-month program features a project-oriented, practical business curriculum. Participants spend the first week of classes, known as immersion week, learning the intellectual framework of the institute and focusing on Farmland principles.

The ensuing sessions, concluding in October, feature team-teaching by Farmland leaders and professors and address real issues facing the company. Topics initiated and taught by faculty include international business, led by Melissa Birch; practical economics, led by Keith Chauvin, ‘82; market processes, led by Barry Baysinger; human resources, led by John Charnes; effective business relationships, led by Joe Reitz, b’60; and financial leadership, led by Beedles.

During the program, employees must complete a business project. The highlight of the institute, Beedles and Snow agree, should come during the last session, when the teams present their solutions for senior managers.

“It’s a great opportunity,” Snow says. “We can help solve current problems of the company while giving our middle managers confidence in their decisions and showing them that we value their judgment.”

By assembling a group that includes employees from all divisions of Farmland, the company’s leaders and KU professors hope to break down barriers within the company and prepare the future senior management to lead on multiple levels. Beedles says that to be truly effective, the “functional silos” that separate co-workers must give way to collaboration.

“When people embrace the philosophy that ‘nobody knows more than all of us,’” Beedles says, “they have a great potential to be winners.”
ARCHITECTURE
Students break barriers to better classroom acoustics

The Acoustical Society of America’s Technical Committee on Architectural Acoustics argues that poor classroom acoustics prevents students from hearing, thus lowering the quality of their education. So the committee commissioned KU architectural engineering students to prepare a handbook explaining how to improve sound in classrooms.

"We think it’s a pressing concern that’s been ignored because of assumed costs," says Bob Coffeen, a lecturer in the architectural engineering department who is supervising the project.

Coffeen says that making classrooms more sound-friendly involves four tasks. First, architects must measure the reverberation time in the room and establish a non-reverberant atmosphere. Next, they must eliminate annoying sound reflections, such as flutter echoes, then replace them with useful reflections. Finally, they must measure the room’s ambient noise level and determine whether it is conducive to learning.

"Many of the necessary changes are simple and inexpensive," Coffeen says. "We can improve on existing buildings."

ENGINEERING
Professor lauded for study of Greenland’s ice sheets

Sivaprasad Gogineni, professor of electrical engineering and computer science, was honored recently for his work in a NASA research program that is monitoring ice sheets in Greenland. In November, the Institute of Electrical and Electronics Engineers elected him fellow for development of research radars and radar studies of polar sea and glacial ice. And in August, NASA lauded Gogineni for his management of its polar research division.

"Being elected fellow is particularly exciting," Gogineni says, "because only one in 1,000 people per year are elected."

Gogineni has spent his summers in Greenland since 1993 developing radars to measure thickness in the ice sheets. He says NASA hopes to study the ice sheets over the next 20 to 25 years to determine their thickness in response to climate changes caused by global warming. His field study will be completed this summer, Gogineni says, and will be followed by two to three years of data analysis.

FINE ARTS
Summer study funds honor custom-jewelry designer

Artists studying metal smithing or jewelry making can now find scholarship assistance for summer study opportunities, thanks to a fund established in memory of Sherin Higdon Custer, f'78.

The fund, established after Custer’s death in 1996, recently received a $49,500 donation from Custer’s father, J. Kenneth Higdon, b'48. Also sent to the Endowment Association was $1,000 in matching gifts from Business Men’s Assurance Company of Kansas City, which Higdon led as president for 10 years before retiring in 1987.

The scholarship fund has already buoyed junior Susan Small-Frutello, who spent last summer studying at the Penland School in North Carolina, and junior Eugenia Ortiz, who was able to attend the KraftWerks symposium in Los Angeles.

"Our family believes this form of scholarship complements Sherin’s essence," Higdon says. "She was committed to her craft in a very deep and giving way and always appreciated the opportunity to learn more. [The scholarship] provides a small opportunity for other talented persons to learn and grow in their calling."

Custer graduated in 1981 from the Gemological Institute of America in Santa Monica, Calif. When she returned to her native Kansas City, she was one of only two certified gemologists working in the metropolitan area. After her marriage in 1987, Custer moved to Fremont, Neb., where she opened a jewelry design studio.

"Sometimes when you are afforded exposure to new ideas, the experience can make something click within you," says Custer’s sister, Barbara Higdon, b’87. "I think Sherin would be thrilled because these opportunities will make it possible for some of these students to move on to a new level of creativity."

LAW
Landmark Indian law case argued again in moot court

The court may have been moot, but the point wasn’t—even though Cherokee Nation v. Georgia had already been decided for nearly 170 years.

A reargument of the landmark 1831 U.S. Supreme Court case was the centerpiece of last semester’s second annual Tribal Law and Governance Conference, sponsored by the School of Law’s Tribal Law and Government Center and the Kansas Journal of Law.

According to conference organizer Robert B. Porter, associate professor of law, the Cherokee Nation in the first half of the 19th century was bristling under Georgia legislation that “wiped out Cherokee legislation and literally, the Cherokee government.” When Georgia officials ruled Cherokee laws did not apply to white men within Cherokee borders, the Cherokees brought the issue to court.

Viewing themselves as a sovereign, foreign nation, the Cherokees invoked the rights granted to foreign governments when those governments sue U.S. states: They took their case directly to the Supreme Court. Their case, however, was never heard, because Chief Justice John Marshall ruled that the Cherokees were not to be considered a foreign nation, but were instead a “domestic dependent nation.” That ruling, Porter says, established a framework for much of America’s decisions regarding Indian tribes.

When the case was reargued at KU before a panel of eight tribal-court judges—headed by Robert Yazzie, chief justice of the Navajo Nation—the outcome was understandably reversed. The

Journalism’s ‘sinful pride’

Journalist Albert Hunt invokes award namesake as he accepts White Foundation citation

To capture the thrill he felt 30 years ago as a young reporter, Albert Hunt, executive Washington editor for the Wall Street Journal and Dow Jones, retold the story of another young journalist who began his career a century ago.

The day was Feb. 5, William Allen White Day, the School of Journalism’s annual tribute to William Allen White, 1890, legendary editor of the Emporia Gazette for whom the school is named. The audience was filled with current and future Kansas journalists. And Hunt, the 1999 winner of the William Allen White Foundation’s National Citation, knew that those assembled, like other families who gather on other holidays, would crave a story about their favorite ancestor.

Hunt set the scene: a Sunday morning in the small, spare newsroom of the Gazette. White, age 27, stood alone, marveling at the duties and opportunities that were now his as the paper’s new owner. “I wondered,” White later wrote, “if God had forgiven me for my sinful pride in it all.”

“What a wonderful description,” Hunt told the audience, “of what so many of us have felt about journalism: sinful pride.”

But journalism these days, he said, offers plenty of sin and precious little pride.

Although journalists are better educated these days than their predecessors—“more like Samuel Johnson than Hildy Johnson,” according to Hunt—they too often settle for superficial stories on scandal, neglecting their duty to thoroughly investigate the impact of cultural issues, such as divorce and the debate over the right to die, or political issues, including the lack of competition in 75 percent of Congressional races and the “pervasive and pernicious threat” that special-interest money poses to the political system.

The yearlong coverage of the Clinton-Lewinsky episode, Hunt said, was “a rush to be first—not necessarily right but first. A rush to gotcha. A rush to be more salacious than yesterday.”

“In today’s journalism, perspective, relevance and a sense of history too often are absent.”

Hunt joined the Wall Street Journal in 1965 and worked as Washington bureau chief from 1983 to 1993, when he was named executive editor. During those years the Journal published stories that ultimately drove former House Speaker Jim Wright, D-Texas, from power, exposed spousal abuse that resulted in the dismissal of one of the nation’s top law enforcement officials; the head of enforcement for the Securities and Exchange Commission; examined the fund-raising practices of former House Speaker Newt Gingrich, R-Ga.; and revealed the CIA’s mining of Nicaraguan harbors. “What all these stories have in common is that they were well documented, accurate and relevant to public policy,” Hunt said. “Like all journalists, we made mistakes, but we tried to bring perspective.”

As executive Washington editor, Hunt directs news coverage and writes a weekly column, “Politics & People.” He has been a member of Cable News Network’s “The Capital Gang” since it began in 1988, and he co-hosts CNN’s “Evans, Novak, Hunt & Shields.” For seven years he was a panelist on Public Broadcasting Service’s “Washington Week in Review.” His wife, Judy Woodruff, is CNN anchor for “Inside Politics” and “The World Today.”

Though himself a TV pundit, Hunt cautioned against shows that have become “farm clubs for political power.”

“Journalism and politics are not interchangeable, but too frequently they are treated as such,” he said. “CNN is the most respected news orga-
nization in America, according to the polls, but when it lets Pat Buchanan and Jesse Jackson moonlight as journalists as they ponder their next political moves, it risks erosion of that public confidence."

Hunt also decried the peripheral media players, including Matt Drudge on the Internet and Geraldo Rivera and Chris Matthews on CNBC, who, though drawing small audiences, set the tone for much of the political coverage in 1998.

"A quarter-century ago, Bob Woodward and Carl Bernstein produced one of the finest chapters in American journalism," he said. "Who among us believes that, a quarter-century from now, that's how we’ll look back on 1998 and 1999?"

When Hunt recalled his own start in journalism, he credited none other than famed New York Times editor James Reston, who in 1930 won the first William Allen White Citation. Reston in the early 1960s visited Wake Forest University in Winston-Salem, N.C. There he met a student reporter named Al Hunt and encouraged him to stick with journalism. Hunt offered the same advice to young KU reporters.

"It's still the most interesting, most challenging, most important profession," he said. Citing the reporting of midsized community newspapers like the Pulitzer Prize-winning Des Moines Register, Hunt urged students to "think of the good the press does" and try to change the superficiality that pervades national coverage. "It is my hope and my conviction that some of you in this audience will be the future Scotty Restons, Edward R. Murrows ... and William Allen Whites—and what sinful pride you will exhibit."

—Jennifer Jackson Sanner

Continued from page 55

Moot-court justices ruled unanimously for the Cherokee Nation. But Porter says the decision was not necessarily automatic.

"The real challenge for this supreme court is to answer the question, 'What is the status of Indian nations?'" Porter says. "It isn't as simple as saying, 'Well, we're foreign nations.' That doesn't reflect the reality of how most Indians think of themselves, and it doesn't reflect the reality that they are within the United States."

Porter, who is a member of the Seneca Nation and is chief justice of the Sac and Fox Nation of Missouri Supreme Court, says the justices' written opinions will be published in the Kansas Journal of Law and distributed worldwide.

"These things have been settled in American law for 170 years. They are far more settled in the U.S. than elsewhere," he says. "But they are real, live issues in places like Australia and Canada, places where they are still working out the relationship between indigenous people and colonizing nations. Any good thinking that can come out of this process can be beneficial to others."

Accessible degree program aims to fill nursing gaps

Facing current shortages of health-care professionals in much of Kansas, and with the nation facing nursing shortages predicted to be felt by 2010, the School of Nursing recently launched the first stages of an online degree completion program designed to bring undergraduate nursing education where registered nurses already work and live.

The program is funded by a three-year, $594,000 grant from the U.S. Department of Health and Human Services' department of nursing.

There are currently more than 15,000 registered nurses in Kansas with associate, rather than bachelor's, degrees. Along with predicted shortages of nurses, health organizations are also citing an impending need for better-trained nurses who have earned bachelor's or postgraduate degrees.

"For many nurses in rural areas, the traditional classroom is not an option because of the distances they must travel to class," says Helen Connors, PhD'87, associate dean for academic affairs.

Of the 105 counties in Kansas, 64 have been designated as medically underserved; 41 Kansas counties have been wholly or partially designated as Federal Health Professional Shortage Area. The online nursing bachelor's program will help fill those voids, school officials say.

Top watchdog
Former KU Medical Center administrator sworn in as FDA commissioner

A
n oncologist and career health administrator recently sworn in as commissioner of the huge U.S. Food and Drug Administration has close ties to KU Medical Center. So close, in fact, that she and her husband maintain a home in Kansas City.

Jane Henney, for seven years a top administrator at KU Medical Center, officially took over the federal government’s 9,000-employee consumer protection agency Dec. 15. She actually began her work as FDA commissioner in late November, after winning Senate confirmation.

“There are few positions that touch our lives in so many fundamental ways as that of the FDA commissioner,” Vice President Al Gore said after he swore Henney in as the FDA’s first woman (and first oncologist) commissioner. “To do the job well, it takes a person of strong judgment and clear vision. It takes of a person of compassion and reason. It takes not just a scientist, but a true humanist. I believe America has found just the right person in Dr. Jane Henney.”

Henney, 51, joined the University in 1985 as vice chancellor for health programs and policy. She also served as interim dean of the School of Medicine from 1987 to 1989 and has been credited with helping establish the Cancer Center, the Center on Aging and the Center on Environmental and Occupational Health. Henney’s husband is Robert Graham, M ’70, who is executive vice president of the Kansas City-based American Academy of Family Physicians.

Henney left the University in 1992 when she was recruited by David Kessler, then the FDA’s new leader, to serve as deputy commissioner of operations. In 1994 she joined the University of New Mexico as vice president of its health sciences center.

In announcing Henney’s appointment, the White House trumpeted Henney as having “fashioned health-care strategies with a focus on individual patient care at two major university medical centers.” After her swearing-in ceremony, Gore’s office lauded Henney’s experience at “some of the America’s finest academic health centers.”

When the crusading and combative Kessler left the FDA, President Clinton looked to FDA alumna Henney, described in various news accounts as a “consensus builder” with a “totally different approach” than Kessler. During her swearing-in ceremony, Henney began her remarks by telling the audience, “I stand before you as a tangible example of the breadth and depth of FDA’s recall authority.”

As commissioner, Henney has pledged that her first priority is implementation of the 1997 FDA Modernization Act, Congressional legislation mandating that the FDA speed its review of new medicines. She also has said that strengthening the agency’s scientific base will be an “urgent” issue.

“I am committed to seeing that our scientific expertise matches the complexity of the new products moving toward the market,” Henney said in December.

Reflecting directives from the Clinton Administration, Henney also will focus on the safety of the food supply, specifically imports and produce, as well as issues regarding the nation’s blood supply and tobacco regulation.

PHARMACY

Online PharmD program keeps pharmacists on job

Pharmacists who want to improve their skills and degrees without missing time at work have a convenient new option: an online PharmD program offered through the University’s Edwards Campus in Overland Park.

The program was launched this semester with 27 students. Director Ronald E. Ragan, p’84, g’97, PhD’98, says that after only one month of advertising, he fielded more than 300 inquiries.

“One of the most important aspects of this is upgrading skills, not adding initials behind your name,” Ragan says. “This provides valuable education and experience.”

But, Ragan adds, the letters behind the name don’t hurt—especially since the University now requires all current pharmacy students to complete a PharmD degree, and all accredited pharmacy
schools must do the same by 2002.
“Folks who have been out of school
maybe six or seven years still have a long
time to work, and they are going to be
competing against PharmDs the rest of
their lives,” Ragan says. “I think this helps
pharmacists compete in the job market.”
Dean Jack Fincham says the program
represents the school’s commitment to
meeting needs of alumni, “both through
skill enhancements and degree upgrades.”
The online PharmD degree program is
designed to be completed in four years,
with a limit of five. It is currently open
only to alumni or residents of Kansas or
Missouri. Students will complete 24 hours
of coursework online and must earn 20
hours of credit in clerkships or intern-
ships. A limited amount of training will
also occur on weekends in classrooms.
“The whole focus,” Ragan says, “is to
allow pharmacists to pursue their PharmD
while they continue working, so they
won’t have to take months away from
their jobs and move to Lawrence.”
For more information about the Web-
based PharmD program, e-mail Ragan at
ragan@ukans.edu.

SOCIAL WELFARE
Social Work Day features
author Claudia Black
The School of Social Welfare and the
Social Work Alumni Society sponsor
Social Work Day April 16 at the Kansas
Union. This year’s theme is “Open Minds
Finding Solutions.” The keynote speaker
is Claudia Black, a lecturer, author and
trainer internationally recognized for both
her pioneering and contemporary work
with family systems and addictive disor-
ders. The other featured speaker is Alvin
Brooks, president of the Ad Hoc Group
Against Crime, a community organization
that he founded in Kansas City.
Morning workshops are from 10:30 to
noon and afternoon workshops are from
2 to 3:30. Check-in begins at 8. For
information about registration, contact
Debbie McCord at 785-864-3804.

True talents
Researchers’ new system helps disabled students shine

Trying to solve the practical prob-
lems of everyday life has been the
focus of Jeannie Kleinhammer-
Trammill and Mary Morningstar’s
research and the intention of the pro-
gressive master’s program they created.
Thanks to an outreach grant of
$540,000 from the U.S. Department of
Education, the two women, both closely
associate professors of education, can
now teach faculty at other schools how
to prepare public-school educators to
help students with disabilities lead
productive lives after school.
“As educators, we’ve done a good job
with academics,” Kleinhammer-Trammill
says, “but we need to do better teaching
the application of those skills.”
Kleinhammer-Trammill says many
students with disabilities are channeled
into low-paying jobs, such as fast-food
service, at an early age. After graduating
from high school, she says, they have
nowhere else to go because they have
not been prepared for anything else.

As an example, she cites a student
with Down syndrome in McPherson.
When the student was 14, she met with
a transition coordinator, who helps stu-
dents make employment connections,
and discussed her career aspirations.
The student wanted to work in an
office, and found internships during
high school. Upon graduating, she
began working full time as an office
assistant in Topeka and is currently a
self-supporting adult.
“We want students to achieve self-
determination—in work, in recreation,
in all the aspects of their lives,” Klei-
hammer-Trammill says.
Training aspiring teachers to be tran-
sition coordinators is the focus of the
curriculum Kleinhammer-Trammill and
Morningstar have developed.
“Currently in Kansas, students have
to choose a category of disability to
teach,” Morningstar says. “What’s
unique about our program is that it’s a
non-categorical endorsement.” —
Bylines gone by

The stories of Stauffer-Flint are written in the memories of students and faculty who have called it home

A freshman makes her way around campus, shyly asking an older, more experienced student where she can find Stauffer-Flint Hall. She has been walking in circles for 15 minutes and does not want to be late for her first college meeting, an informational session about becoming a Kansan correspondent. He laughs and tells her she’s standing right in front of it. With an embarrassed “thank you,” she turns, picks her head up and sets out to begin her career as a journalist.

This moment of temporary anxiety, the juxtaposition of displacement and possibility, has recurred in my life many times since my initial search for Stauffer-Flint Hall. Perhaps because my sense of direction is bad, or perhaps because I am prone to introspection and daydreaming, feeling momentarily lost is not unusual for me. The sense of having truly arrived, though, is more elusive. Stauffer-Flint Hall, home to the William Allen White School of Journalism and Mass Communications, provided me that semblance of home during my years in school, as it has for thousands of others. This year, Stauffer-Flint turns 100.

The enduring structure, made of rock-face ashlar stone quarried on Mount Oread and topped with a red-tile roof, was built in 1899 to house a machine and print shop and was known as Fowler Shops. In 1952 the Kansas Legislature appropriated $300,000 to repair and remodel the building to house the journalism department. It was renamed Flint Hall in honor of the legendary Leon Nelson “Daddy” Flint, c’1897, a pioneer of journalism teaching. In 1982, with the computer age approaching, the building was remodeled again. The “Stauffer” in Stauffer-Flint was added in 1983 to honor longtime Kansas editor and publisher Oscar Stauffer, ‘12, and his family.

The physical structure that is Stauffer-Flint has withstood much in its tenure on Jayhawk Boulevard. There were serious fires in 1918 and 1932. Military departments were stationed there during both World Wars. The building once housed a printing press that literally shook its foundations. Still, the stone and mortar, the constant external face and the ever-changing internal anatomy have never defined Stauffer-Flint. The essence of the old building has been the cohesive spirit of the faculty and students who have spent their days and nights there.

The words that capture most closely the spirit of Stauffer-Flint are those of Professor Emeritus Lee Young, g’68, who taught in the J-School from 1964 to 1989.

“To me, the physical environment has never been a major factor in my feelings about life in Flint Hall,” he wrote in the fall 1981 Jayhawk Journalist. “I remember the students I have taught and the colleagues I have worked with much more vividly than the rooms I encountered them in. What I have loved about Flint Hall has been the people, and if the planners and remodelers don’t change them, things won’t be much different for me in the future.”

Whether Stauffer-Flint Hall survives another 100 years remains to be seen. But for a good many more years, it will continue to be a home for the faculty and students who bring it to life. History tells me so.
WE CAN HELP KEEP YOUR GRADUATES STUCK IN THE SAME OLD PLACE.

And the same old place will take them far.

No, they're not going to move their stereos—or their laundry—back home. They're going places. After all, they're KU graduates.

But by remaining part of old KU, they'll meet people, make connections, make a place for themselves.

Alumni Association membership is the connection they'll need. You're a member. You know the benefits. Now you can give them to your grad at a reduced cost of $25 a year for three years.*

Call 1-800-584-2957 to buy your gift membership, and we'll send a card to your grad.

Kansas Alumni
ASSOCIATION Founded in 1883

*Joint rate $30. Reduced rates good for first three years after first KU degree earned.
Put a 'Hawk in your pocket.

Applying for a Jayhawk credit card helps to support Alumni Association programs. Call today and put the crimson and blue to work for you.
