How We Wonder What You Are
Electronic education emerges from its infancy
Will your golf clubs work in the new millennium?

We’re 99.9% sure they are compliant but, just to be certain, we advise that you play in the

2000 Southwest Open
February 21, 2000
Gainey Ranch Golf Club
Scottsdale, Arizona

One of the first chances to swing the sticks in the year 2000! Plan to be in Scottsdale and enjoy some of Arizona’s finest fairways and KU camaraderie. The Y2K bug repellent is on us.

Valley of the Sun Chapter members will receive more information soon, but the Alumni Association invites ALL Jayhawks and their friends to participate in this great annual event.

If you would like an invitation, call us at 800-584-2957, or e-mail ksalumni@kuaa.wpo.ukans.edu

See our website at www.ukans.edu/~kualumni for additional details.

Fifty years after he enrolled as a freshman on Mount Oread, Acting Chancellor Raymond Nichols welcomed students to the 1972-73 academic year at the 107th Opening Convocation. "I hope that the age difference is the only gap between us," he said, "and that no gulf exists in the matters of communication and understanding."

Nichols had no reason to worry. In the 1970s, and through the five decades that preceded and the two that followed, he keenly understood KU. Though he was linked to the past, he always remained a KU contemporary.

Chancellor Emeritus Raymond Nichols, c’26, g’28, died Oct. 12 in Lawrence. He was 95.

Our story of Nichols’ life, a life devoted to the University he loved so dearly, is written by his trusted friend and neighbor, Professor Jim Carothers. In recent years, as age and illness limited Nichols’ involvement on the Hill, Carothers and his wife, Beverly, kept Nichols connected to all matters KU. Carothers’ tribute begins on page 10.

The rest of this issue explores technology’s effects on education, a contemporary debate for which Nichols no doubt would offer a feisty opinion. Chris Lazzarino introduces the special package of stories that opens on page 20.

You’ll also find our traditional fall favorites: the Jayhawk Generations feature, profiling freshmen who follow KU ancestors to the Hill; the TV Guide to Kansas Basketball, listing outposts nationwide where hoops fans gather; and the 2000 color calendar, another year’s helping of memorable Mount Oread scenes.

A prized campus sight, the flags atop Fraser Hall, became even more poignant following Chancellor Nichols’ death: The KU flag, lowered to half-staff, honored the passing of a man who in the early 1970s knew his alma mater so well that the Kansas Board of Regents decided there was no better leader to soothe campus strife. Soon after Nichols welcomed students in August 1972 as acting chancellor, the Regents lopped the “acting” from his title, bestowing on the servant of five previous chancellors the title he deserved to share. And, after Nichols had steadied the once-turbulent campus, the Regents proclaimed him KU’s first chancellor emeritus when he retired in 1973.

During his convocation speech, Nichols reassured students, faculty and alumni during an era of upheaval, bitterness and distrust. “The University is greater than any momentary period of distress," he said. "Over the years it has demonstrated its toughness by surviving storm and stress. It has reached its level of recognition by its ability to steer a steady course through good times and bad. Our business is young people; our business is the development of young men and women into mature men and women, creating the kinds of citizens who will take their places in the greater society as responsible and creative individuals.

“The only direction this university knows is forward. So let us move ahead together, united and directed by that indefinable spirit which for more than 100 years has characterized the University of Kansas.”

That spirit remains indefinable yet palpable—in the pageantry of a Convocation or a Commencement and in the pride that courses through so many who understand even a mere fraction of what Nichols knew about KU.

Stoking the spirit, of course, are the echoes of Rock Chalk Chants and the reels of basketball highlights that run through our heads. So it seemed somehow eerie that Nichols, champion administrator, should be joined not only by indefinable spirit but also by inexplicable coincidence with another KU champion. Wilt Chamberlain, ’59, also died Oct 12, only hours before Nichols. We recall Chamberlain in this issue’s In Memory section and on our magazine’s final page, where we share a rare portrait to remind us all of a legendary Jayhawk.

Those lucky enough to witness Chamberlain’s triumphant return to KU in January 1998, when his No. 13 jersey ascended to the honored heights of Allen Field House, will not forget the sight of Chamberlain wearing his letterman’s jacket, perfectly preserved after 40 years away from the Hill. At the time, there were lingering questions about where KU truly stood in his heart, and where he stood in the hearts of his fellow Jayhawks.

The standing ovations that rained down on Chamberlain, and his sincere tears of joy in reply, thankfully settled both questions for good.

Raymond Nichols never knew the joy of standing ovations. But he embodied the indefinable spirit we revere, and he deserved the cheers of praise as much as any Jayhawk ever did. We stand and cheer him now.
Cheers for amphitheatre

I couldn’t decide if you thought the amphitheatre my husband proposed in 1960 ["Build It and They Will Leave," No. 5] would have been a delight or a disaster! Nonetheless I appreciated the research you must have done to turn up his memo of 1960.

Al was very modest about it, but really deserves lots of credit for the beauty of the KU campus. Thank you.

Lawrence

Press on

I was interested in the short article and photo of the hand press [Schoolwork, No. 5] located in Stauffer-Flint Hall that will be moved to Spencer Research Library soon.

While an employee of the University Printing Service in the early ’70s, it was my job to clean up the old printing equipment in the Ryther Printing Museum, and the Washington Hand Press shown in the photo was one of my projects. I shined up all of the brass pieces, repainted it and refinished the wooden parts.

When my daughter Amy went to KU in 1989, I took her to Stauffer-Flint to see the press and to show her that my name and date were painted underneath the platen in gold paint. I’m glad my work will be preserved for future generations.

Joel Klaassen, J’68
Hillsboro

The good Dr. Johnson

Congratulations on another outstanding issue of Kansas Alumni. In the September issue I especially enjoyed the article about Dr. Ted Johnson [Oread Writer].

He is a teacher who concerns himself at least as much with process as he does with content, and his lessons in both are indelible in the minds of students.

None of us will ever see the world in quite the same way again.

Linda Kerby, N’71, C’87
Leawood
Fight evolution decision

I read with great interest the two letters which appeared in Kansas Alumni, No. 5, concerning the regrettable decision by the Kansas Board of Education to de-emphasize evolutionary science.

What disadvantages will bright adolescents face if their curricula change and widely-accepted upon scientific principles of evolution are skipped in favor of religious dogma and myth?

Since when is it the responsibility of a public-funded school system to elevate religious doctrine to the status of science or other traditional high-school subjects such as art, literature, history, etc.? What will the Board of Education say when science scores fall on pre-admission tests? What will they say when businesses decide not to locate in Kansas so that employees are not compelled to send children to backward schools?

This decision was ill-conceived and dangerous. The doctrine of separation of church and state exists to spare public-sponsored programs the wild-eyed ravings of zealots convinced of the errors of everything else. I hope my alma mater and the Board of Regents exert maximal pressure on the Board of Education and Legislature to insure proper educational preparation of Kansas high-school students.

Otherwise we will be paying taxes to support remedial education for college students who had the misfortune of attending a Kansas high school.

Richard J. Mundis, c'70, m'74
Overland Park

New era of intolerance

I read with interest the letters and editorial notes in Kansas Alumni [Lift the Chorus, No. 5]. Evolution was accepted by me as theory and fact, not having understood the elements of theory. Over the last 10 years, I have read about the theories of our origins. The gradualism of Darwinism is not borne out by either the immense gaps in the fossil record or the relatively short time of 4 billion years as the age of earth. ...

Out of the in crowd?

Shattering our alma mater’s reputation as a center of “social” significance, the Princeton Review has omitted the University from its annual list of the nation’s top 10 party schools. The snub breaks a two-year streak and leaves KU devoid of decadent distinction.

But lest anyone think that partying on the Hill is passé, one has only to look at the smug soirée in Strong Hall, where administrators are celebrating the Review’s slight.

“That’s the best news in respect to a rating I’ve ever received,” says David Ambler, vice chancellor for student affairs.

Provost David Shulenburger agrees.

“I’m very pleased with that,” he says. “I think that was an anomaly the last time. This is a serious place.”

Student body vice president Dede Seibel says she hopes attention turns toward more conventional commendations, such as KU’s designation as a Barron’s Best Buy and its perennial four-star ranking from the Fiske Guide to Colleges. “These are the stats that truly say what KU is all about,” she says.

Indeed, Fiske’s 1999 edition hails KU’s “solid academics, outstanding extracurricular programs, winning athletics—”

And “stellar social life.” What’s this? Accolades for after-hours antics?

Seems a toast from Fiske means KU’s traveling in the right social circle.

Oooh ... they’re warm!

Ralph Smith has been blessed with thousands of kids. At least it must have seemed that way, spending his entire adult life serving glazed doughnuts hot out of the fryer to appreciative students who sweetened their late-night study breaks at Joe’s Bakery on Ninth Street.

But the tradition halted a year ago when Smith, 41, closed his family bakery. He was enduring a divorce, and doughnuts and sandwiches didn’t seem all that important.

The good news for students and Lawrence-area alumni is that the bakery’s sabbatical ended two days after Labor Day. The better news for Smith and his real kids—ages 12, 10 and 8—is the shop’s new shorter schedule: 9 a.m. to 9 p.m. The hot-glazed doughnuts are now morning staples rather than late-night delights.

“My whole life, I knew the night people, that whole lifestyle,” Smith says. “This daytime thing is completely new to me. Maybe I’m not dressed right. Guess I’ll have to find that out.”

Though he insists 2 a.m. closings are long gone, Smith also wants out-of-towners to know he plans to remain open later than 9 p.m. after basketball games and other popular campus events that bring Joe’s alumni to Lawrence. After all, a tradition as hot as late-night Joe’s runs can’t be entirely forgotten.

Perfect pitch

They do it in unison and without direction.

They do it in basketball arenas from coast to coast. They do it to taunt the opposing players. And at Allen Field House, they do it on a level just a bit higher than anywhere else.

“It” is the infamous “air ball” chant, prompted when a visiting player’s shot misses the hoop, the rim and the backboard. According to Chernill Heaton, professor of English at the University of North Florida and author of “Air Ball: Spontaneous Large-Group Precision Chanting,” Jayhawk fans begin their ridicule with a note slightly higher than an F sharp. At other universities, the demeaning chant almost always starts at F and goes to D.

Proof positive that KU faithful are at least a half-step above their peers.
Mmm, mmm good

What's good for the soul is good for Lia Gay. Though only a sophomore, Gay counts four best sellers in her personal bibliography, all in different helpings of Kimberly Kirberger's Chicken Soup for the Teen Soul series. Since age 15, Gay has added nourishing stories to Kirberger's successful recipe; now she has stirred KU flavor into Chicken Soup for the College Soul.

Her latest stories, "Shoes in the Shower" and "The Long Road Home," address ordeals familiar to most college students, including sharing bathrooms, meeting new friends and returning home to find that home has changed.

"The stories are mainly about growing up and being a long way from home," says Gay, who came to Lawrence from Santa Monica, Calif., and spent her freshman year in McCollum Hall before moving into the Delta Gamma sorority this fall. "They're about finding yourself and the people who support you. They're about KU in the sense that all of my college experiences have been here, but I think people anywhere can understand. Especially after four helpings.

Fans have no alternative

A year after cajoling Hollywood Theaters into offering student discounts on movie tickets, Student Senate and its dear friends are diving once more in the fray to defeat yet another entertainment enemy—a recent format change at KLZR 105.9 FM.

"The Lazer" has long been adored for offering alternative music rarely heard elsewhere on the radio. But a change in ownership brought mainstream pop music onto the KLZR playlist, and a student senator is pushing legislation condemning the format switch: "This is a chance," she says, "for some good, old-fashioned college activism."

Vandals broke station windows three times. Student groups are briskly selling $8 anti-Lazer T-shirts. Protest petitions circulated around Lawrence. Columns denouncing the new format appeared in the Lawrence Journal-World and the free weekly Pitch. The University Daily Kansan offered not one but two editorial cartoons. And even K-State students joined the crusade, writing a letter to the editor begging that "jayhawks speak out!!"

For now, however, there is some small consolation: At least heavy-hearted students know where they can sing along to teary breakup tunes.

Dangerous punctuation and so much more

Unlike boxers and rock 'n' roll stars, retired magazines rarely return. Explore: (this time with the colon added) is the delightful exception.

Published by KU for 14 years, Explore was the rarest of creatures: a zippy research magazine. Its content reflected its editor, Roger Martin, whose writing is featured in this and many other issues of Kansas Alumni. Although the magazine dedicated to publicizing KU research won more than 40 regional and national awards, Explore's run ended in 1995.

But Martin, g'73, communications coordinator for the Office of Research and Public Service, never went away, and he's spent the past few years tossing around ideas for another magazine. Then he found his inspiration by turning from barrels of ink to electronic links. Hence, Explore: at research.ukans.edu/explore/

So why the colon? "It's our favorite punctuation mark," Martin explains in his online editor's column. "A colon is a cliff within a sentence; at the cliff, the reader is hurled from the abstract (before the colon) to the concrete (after)."

Visit the site. It's one of the best online magazines we've yet seen, and Martin certainly makes it his own. But we must quibble with his claim: How can the colon rule? Everyone knows the semi-colon is much more seductive; then again, we here at Kansas Alumni rarely hurl readers to the concrete, either.
Remembering Ray
KU loses its enduring 20th-century champion with the death of Chancellor Emeritus Raymond Nichols, 95

Raymond Nichols was my neighbor. He will be most frequently remembered as chancellor emeritus of the University, the person who restored confidence and trust after the University’s troubled times of 1969 to 1971. Others will remember him as executive secretary to the chancellor from 1929 to 1938, executive secretary to the University from 1938 to 1972, and the University’s first vice chancellor for finance, from 1962 through 1969. He will also be remembered as the Jayhawks’ most faithful basketball fan; as a recipient of KU’s Distinguished Service Citation and the Alumni Association’s Fred Ellsworth Medallion; as a steadfast and active leader of his church, his fraternity and the Boy Scouts; and as a board member and trustee of numerous public organizations and institutions.

But I like to remember him as my neighbor, who lived up the street in the little Cape Cod house at the end of the cul-de-sac on Alabama Street.

He and his wife, Clytice, welcomed a young assistant professor and his family to the neighborhood in 1971. They took a friendly and helpful interest in us, and adopted our children as part of their family. Michael, ’85, remembers the pleasure Ray took in the scholarship dinners at the Sigma Chi house. "He would always ask the guys, ‘Where are you from?’ and ‘What are you doing now?’ and ‘What are you going to do?’ He emphasized the present and the future." Cathleen, ’99, remembers field trips to the Nichols’ house from the Edna Hill Child Development Center in Haworth Hall. "We would hold hands with partners and walk down to the Nichols’ house. I felt very important to be able to introduce them to the other preschoolers. They would show us their garden and give us a treat."

Raymond took care of that yard in all weathers, raking, mowing, planting, pruning. He climbed a ladder and mounted the steep pitch of his roof to clean leaves from the gutters until he was nearly 90. He canvassed for every charity. When the doobler rang in the evening, there would be Ray. "Here I am, rattling the can again," he would say. It got to where, regardless of the cause, he could predict just who would contribute and how much.

As chancellor, Nichols, ’26, ’28, showed the same modesty, prudence, forthrightness and optimism that marked all of his service. When he was asked to serve as acting chancellor in 1972, he responded, ‘I’ll be happy to serve the University of Kansas in any way that I
can." But he and Clytie chose not to move up the Hill to the chancellor's residence on Lilac Lane. "It seemed like too much trouble," he recalled later. And when the Kansas Board of Regents conferred the full titles of chancellor and chancellor emeritus on him, he proudly and cheerfully quoted Clytie's response: "It's the same old barn, even if you put a new coat of paint on it."

Raymond came to KU from a farm near Larned, and he never forgot that. He held onto the land "out there," so he had a practical awareness of the weather and the crops, and he knew what people were thinking about across the state. As an undergraduate, he studied English and journalism, and was elected to Phi Kappa Kappa. He was president of the Student Council and edited both the Jayhawker yearbook and the University Daily Kansan, and forever after he was keenly interested in what the student leaders were thinking and doing.

In the early 1980s, a diary of a former University administrator was discovered in University Archives. Ray read it, and was astonished at the diarist's account of numerous events Ray himself had experienced. The result was his personal essay, "I Never Kept a Diary." In this remarkable document, he recalled the good times and hard times at the University, as well as his own various roles in the spectrum of activities: giving out football tickets to legislators in a little booth north of Memorial Stadium, helping to calm down an irate Sinclair Lewis at the Eldridge Hotel before a promised lecture, seeing consecutive budget cuts of 10 percent and 25 percent during the Depression. He also lamented the disappearance of beloved traditions ... the night-shirt parade, the freshman cap (beanie) rule, the new-student induction. When Traditions Night was re-established in 1985, Ray was, naturally, faithful in his attendance.

In April 1997, in one of his last public days, Raymond began the afternoon attending the dedication of the Dole Institute in Allen Field House. After the ceremony he greeted Sen. Bob Dole, '45, then proceeded to the Adams Alumni Center for several receptions in which he hailed many by name and engaged in spirited reminiscence and conjecture.

When I asked him whether he was ready to go home, he replied, "What's next?"

Learning that the All-University Supper was scheduled across the street at the Kansas Union, he said, simply, "We'd better go."

A place was arranged for him at a table near the dais, and he remained seated in his wheelchair while the national anthem was played. As the dinner continued, he enjoyed a lively conversation with his young friend Christopher Budig, '88, as always speaking principally of the present and the future. To close the ceremony, the audience was asked to rise, and when the first notes sounded, this remarkable man pushed back his wheelchair, rose to his feet, and remained standing for all three choruses of the alma mater.

We were lucky to have him, and to have him as long as we did.

Rock Chalk, Raymond. --

Professor James B. Carothers

**Good and plenty: Figures show sound student body**

The numbers are nearly the same, but the quality of students at KU has improved, according to the 20th-day enrollment figures released by the Kansas Board of Regents. Enrollment at two of KU's three main campuses has increased,

Renowned paleontologist and evolutionary biologist **Stephen Jay Gould** addressed an overflowing Lied Center crowd with a lecture titled "Questioning the Millennium: Why We Can't Predict the Future."

**WHERE:** The Lied Center

**SPONSOR:** The Hall Center for the Humanities

**BACKGROUND:** Gould, a Harvard University professor, blasted the Kansas Board of Education for its decision to make teaching evolution optional in a Time magazine essay in August.

**ANECDOTE:** Gould used several examples from biological evolution to illustrate how science allows for explanations of past events, but not predictions of future events. He also cautioned the audience against thinking of the human race as particularly important in a grand evolutionary theme. "We Homo sapiens are not the end result of a predictable lineage," he said. "We are an item of history, not of tendency."

**QUOTE:** "I'm assuming, as all educated folks are, that you are going to throw out that school board at the next election. I know we're all on the same side on this."
and a record number of National Merit scholars have chosen to pursue their educations on Mount Oread.

The Regents' report shows enrollment on KU's Lawrence and Edwards campuses grew 1 percent, or 251 students, from fall 1998, while declining by 1.5 percent, or 38 students, at KU Medical Center.

Meanwhile, 101 National Merit scholars are part of this fall's freshman class, up from 64 in 1998 and 90 in 1997.

"We're most pleased with the quality of students we're bringing to the University," says Alan Cerveny, director of admissions and scholarships.

Chancellor Robert Hemenway set a goal of having 100 freshman National Merit scholars by 2000, and Cerveny's office has worked hard to make that goal a reality a year ahead of schedule.

"We had to adjust our scholarships to be able to compete with other schools," Cerveny says, "and I think the results speak for themselves."—For more information on National Merit Scholars, see story, page 40.

UWC invites past winners to 100-year birthday bash

A century ago, women students could not even claim their own restroom on campus. The University Women's Club has changed that, and much more. In May, the organization will celebrate a century of service to the KU community.

"For so long, there were so few female students," says Joan Reiber, g'72, the club's president. "Now there are so many options for women. It's very special to be a part of the celebration of a group that has done so much to make those opportunities possible."

The organization was created as the Ladies of the Faculty in 1900 to serve as a liaison between faculty wives and University women students. The group's early role was to serve as mentors and advocates for the significantly outnumbered and underrepresented female scholars. One of the group's first accomplishments was establishing a restroom just for women at Spooner Library. Since then, the name has changed—first to the University Women's Association and then, in 1921, to the University Women's Club—the organization's role has changed, and the times have changed. But the group has sustained its relevance.

Today, the University Women's Club is most interested in the scholarships it rewards annually to deserving female students. The scholarships were established in 1915; since then, more than 140 women have reaped the benefits of the club's fundraising efforts. Reiber hopes that when next year's scholarships are awarded in April, former winners will return for the ceremony.

"We're trying to locate all of our past winners as a way to celebrate how far we've all come," she says. "We want to welcome them back to the place where they got their start. We want to welcome them home."—For more information, contact Joan Reiber, president of the UWC, at 785-843-5537.
**ROCK CHALK REVIEW**

**MILESTONES, MONEY AND OTHER MATTERS**

- **UNIVERSITY LEADERS AND OFFICIALS FROM THE W.T. KEMPER FOUNDATION** and Commerce Bank do not carry instruments or perform high kicks, but their annual fall parade around campus still draws applause and cheers from students, who enjoy watching their surprised professors receive $5,000 checks. This year's winners of the William T. Kemper Fellowship for Teaching Excellence Awards are: Ron Francisco, professor of political science and Russian and East European studies; Allen Ford, professor of business; James Shortridge, g'68, PhD'72, professor of geography; Sandra Albrecht, associate professor of sociology; Ann Schofield, professor of American studies and women's studies; Renate Mai-Dalton, g'83, associate professor of business; Brenda Myles, PhD'90, associate professor of special education; Thomas Lewin, associate professor of history; Arlene Barry, associate professor of teaching and leadership; Diana Carlin, d'72, g'74, professor of communication studies; Stephen McAllister, c'85, PhD'88, associate professor of law; Victor Bailey, professor of history; David Holmes, professor of psychology; Jan Kozma, professor of French and Italian; Philip Schrodt, professor of political science; Norman Slade, professor of ecology and evolutionary biology and curator of mammals at the Natural History Museum; James Fishback, m'83, MCR'97, associate professor of pathology and laboratory medicine; Vincent Gattone II, professor of anatomy and cell biology; Anita Wingate, n'63, PhD'72, associate professor and academic coordinator of nursing; and William Peery, g'96, associate professor of internal medicine.

- **THREE KU PROFESSORS AND A KANSAS STATE UNIVERSITY** professor received 1999 Higuchi/Endowment Research Achievement Awards and were each awarded $10,000 to further their research. The winners are: Rex Martin, professor of philosophy; Tyrone Duncan, professor of mathematics; Sudhansu Dey, professor of molecular and integrative physiology at KU Medical Center; and Jan Leach, distinguished professor of plant pathology at KSU.

- **TWO KU-AFFILIATED RADIO STATIONS HAVE EARNED** lofty recognition. The Kansas Association of Broadcasters for the fourth year in a row named KANU-FM 91.5, the University's public radio station, Non-Commercial Radio Station of the Year. The station also won three first-place awards, three second-place awards and two honorable mentions in public affairs, news editorial or commentary, newscast, features and promotional announcement categories. KJHK-FM 90.7, KU's student-run radio station, was named by Rolling Stone one of the six college radio stations that rock the World Wide Web in its Oct. 14 issue. The magazine cited KJHK as the first college radio station to do a 24-hour live broadcast on its Web site, kjhk.ukans.edu. Rock on!

- **BOLSTERING CHANCELLOR ROBERT E. HEMENWAY'S** convocation promise for KU to become a leader in science education, the William and Flora Hewlett Foundation has awarded the department of chemistry a $150,000, two-year grant to develop learning laboratories based on problem solving. The grant will be matched by $140,000 provided by the office of the provost.

**POET OF PASSION**

In an unapologetic and often humorous style, poet, author and essayist **NIKKI GIOVANNI** spliced readings of her poetry with stories and candid advice that captivated an audience of about 700.

**WHEN:** Sept. 2

**WHERE:** The Lied Center

**SPONSORS:** National Council of Negro Women, Student Senate, the Office of Multicultural Affairs and the Emily Taylor Women's Resource Center.

**BACKGROUND:** Giovanni, a professor of English at Virginia Polytechnic Institute and State University, grew up in Cincinnati. She was a leader in the black arts movement of the late 1960s and early 1970s.

**ANECDOTE:** Giovanni said it was "hypocrisy" that so many people are concerned about drug use in the inner city, but look the other way when "the suburban housewife is taking Valium because she is bored." Giovanni likened the medicine she took to ease her pain when she had cancer to the drugs that infest poor neighborhoods. "I see no difference between the cancer in my lungs and the cancer on the streets that makes living unbearable," she said.

**QUOTE:** "One of things we ought to do in this century is leave racism aside. We didn't need it in the last one and we sure don't need it in the next."
Dylen 911

KU looks to new quarterback Dylen Smith for salvation after staggering and stumbling to a disappointing start.

THE KU VOLLEYBALL TEAM is proving that a home of one’s own can truly make a difference. Since moving into the Horejsi Family Athletic Center this fall, the team has ascended from the bottom of the Big 12 and is poised to move into the conference’s upper ranks. With a 13-6 record, the 1999 Jayhawks are likely to become the first KU team since 1993 to have a winning record. In addition, they almost assuredly will finish with the most Big 12 victories in school history. The record is six; KU already had four with 13 matches remaining.

“We are just climbing our way up the conference,” Coach Ray Bechard says.

Senior middle blocker Amanda Reves agrees that the Jayhawks are in the midst of a very special season.

“Every match is special for the seniors because we have had very few Big 12 wins in the past,” Reves says. “This is the first season we have beaten several conference teams.”

Reves, who was named Big 12 Player of the Week for Oct. 4-10, has played an important part in KU’s success. Her aggressive play is moving her up on the school’s list of all-time kills leaders, and her competitiveness is contagious. She simply loves to win. Even after earning player of the week honors, Reves was quick to credit her teammates and emphasize that winning is her only goal.

During a match against Baylor, Reves leapt high off the ground and seemed to stop in mid-air, as if pausing to appreciate her perfect position. Then she slammed the ball mercilessly toward the ground, finishing off the volley and the Baylor Bears.

Nineteen matches into the 1999 season, KU finds itself in a similar position. Bechard hopes his team will go for the kill.

Zac Wegner sits undisturbed in front of his locker, hidden from the glare of the spotlight that now illuminates teammate Dylen Smith. The two quarterbacks have reversed their roles, and incumbent starter and captain Wegner now backs up junior-college transfer Smith. It is Smith who now must answer the difficult questions about his team’s injuries and inefficiency, about its heart and desire midway through a season that has failed to meet anyone’s expectations.

In August, Coach Terry Allen and his players talked excitedly about the team’s depth of talented offensive skill players; by the middle of October, KU’s top three running backs and three of its top five receivers had missed games because of injuries. At the beginning of the season, Allen noted that the defense might be a question mark; after seven games, the Jayhawks ranked 108th in pass-efficiency defense. At press time, KU was 3-5 following a 21-0 victory over Missouri, but Nebraska, Baylor, Oklahoma State and Oklahoma still loomed.

The year has been disappointing for Kansas from the outset, defeat after demoralizing defeat cushioned only by victories against two woeful opponents and an upset of the rival Tigers. KU opened the season with high hopes against Notre Dame in South Bend, Ind.
Despite a second-quarter surge that brought the team within a touchdown at halftime, the Jayhawks lost, 48-13. A lopsided 71-14 win over Division I-AA Cal State Northridge followed. But the true barometer for KU's season, Allen had said since the schedule was finalized, was the team's date with Colorado in the season's third week. A 51-17 thrashing by the Buffaloes sent a message loud and clear. Then San Diego State came to Memorial Stadium.

"It's an embarrassment," Allen said after SDSU won, 41-13, racked up 572 total offensive yards and took the Jayhawks completely out of the game after the first drive. "This is the lowest point in my tenure at Kansas and probably in my coaching career."

Said sophomore receiver Harrison Hill, "I'm just sick of feeling like this and I don't know what we're going to do to change it."

Allen had an idea. When football teams struggle, the first fingers of criticism tend to point toward the quarterback, so it was no surprise when Allen demoted Wegner in favor of the quicker, more versatile Smith.

"We just thought Dylen had the athleticism to help us a little more," Allen said. "You're always one snap away from using another quarterback, but Dylen's going to be our starter."

By Smith's fourth start, against Missouri, Allen's decision paid off. The emotional victory indicated KU might indeed have something left to give.

"Football is a game of emotions," Allen said. "Since the low point we reached against San Diego State, we've played very well emotionally."

Smith's debut in a 27-9 Homecoming win over lowly Southern Methodist was impressive. The junior completed 19 of 34 passing attempts for 215 yards and two touchdowns. KU then lost its next two games, to Kansas State (50-9) and Texas A&M (34-17), but to judge Smith's performance in light of the depleted offense he had to work with would hardly be fair. Running backs David Winbush, Mitch Bowles and Henri Childs and receivers Byron Gasaway, Termaine Fulton and Eric Patterson all have been injured. Injuries to six key players would weaken any team; on a team that touts its offensive skill players as its primary strength, the injuries have been incapacitating.

But, ultimately, it may be KU's defense that kills its season softly. The Jayhawk secondary surrendered 306, 343, 221, 312 and 362 passing yards in consecutive games until it stopped Missouri.

"We obviously have some problems in our secondary," Allen said.

The defense has been prone to giving up big plays, and the offense has not been particularly effective in making them. Allen tinkered with defensive personnel, but he is committed to Smith as the starting quarterback.

Smith, against all odds, remains hopeful about the rest of the season.

"I think that we can move the ball on anybody in the league," he said. "It cannot get much tougher than Texas A&M and Kansas State."

As Wegner looks on, reporters fire questions at Smith. The player known for his elusiveness on the field cannot escape now the responsibility of his new role. Wherever Kansas goes, it will be Smith who takes the team there. At this point in the season, it's fourth and long and Smith is scrambling.

**Fierce basketball battles begin in early practices as Williams sorts deep roster**

Erie Chonowith is the preseason Playboy All-American, the 7-1 center poised to become the next big thing in Coach Roy Williams' long line of celebrated big men. He returns for his junior season as the team leader in scoring, rebounding and blocked shots. He is regarded as one of college basketball's top centers. And yet, on the eve of what could be a spectacular season and return to national prominence for KU, the top player on what promises to be a top team is not the top story. As practice began,
WHAT'S IN A NAME? Just ask Lynn Pride, whose marvelous moniker is a headline writer’s dream and a source of, well, pride, even for Pride herself.

“I’ve thought to myself before, ‘Man, I got a great last name,’” Pride says. “I guess there’s no reason for me to go out there and not show any pride when I have pride on the back of my jersey.”

The preseason All-America basketball player has seldom shown Jayhawk fans anything less in her illustrious collegiate career. Last year, en route to a spot on the All-Big 12 first team, Pride led KU in scoring, rebounding, steals, blocks and minutes played. But Pride’s sheer dominance proved to be detrimental to the team. Opponents who wanted to stop Kansas simply focused on stopping Pride. To some extent, it worked: Despite finishing 23-10 overall, 11-5 in the Big 12, KU ranked 12th in the conference in scoring offense.

“A lot of teams got us last year by focusing on Lynn,” says junior forward Jaclyn Johnson. “This year if they want to focus on Lynn Pride they’re going to get burned by four other people.”

That’s because the Jayhawks have adopted the triple-post offense, the same offense employed by the Chicago Bulls to take pressure off of Michael Jordan during their 1990s dynasty. The Jayhawks even brought in one of the former Bulls assistants to teach KU coaches its intricacies. Whether or not KU can master the continuous-motion offense in time for its season opener remains to be seen, but Coach Marian Washington and her players are optimistic about the possibilities the new offense presents.

“It’s a reaction to us being so predictable with our offense,” says junior guard Jennifer Jackson. “By the middle of the conference season, teams were overplaying what they thought we liked to do best.”

SITTING PRETTY: Lynn Pride and Eric Chenowith are both candidates for the Naismith College Basketball Player of the Year awards. Pride averaged 13.9 points a game for the USA Pan American Games team this summer and Chenowith was chosen for the Playboy Preseason All-America team.

Chenowith and 6-1 sophomore point guard Jeff Boschee were the only probable starters on a team so deep and talented that as much attention focused on who would not start as on who would.

“Sometimes depth is overrated,” Williams says. “I can find nine people enough time and not have worries myself. Once you get past nine, I think each person you add is somewhat of a detriment. We’ll let ‘em fight like crazy the first three weeks and see who deserves to be in the nine or 10 spots. I’ve always been a coach who says it’s the players who determine who plays.”

Although Williams says he wishes Chenowith would have spent more time playing basketball and less time attending eight Dave Matthews Band concerts during the off-season, the California native certainly will play. In addition to adding strength to his giant frame, Chenowith has polished a smooth jump hook shot.

“At home this summer, I’d go out in my backyard and make 25 jump hooks every day, just for the muscle memorization so it feels like second nature during a game,” he says. “I worked hard two summers ago to have the kind of year I had last year, and I think I’ll make the same kind of improvement this year.”

Boschee is likely to resume his role as starting point guard, but last year’s Big 12 freshman of the year will have to improve his shooting percentage and assist-to-turnover ratio if he wants to keep his job. Williams says the confident backcourt leader, who he referred to last season as “fearless or clueless, I’m not sure which,” must “take better shots or he won’t play.”

Depth gives Williams the luxury of making such statements. But depth also challenges the 12th-year coach to find the right mix of talent and experience to coax the most out of competitive practices and fragile egos.

“If I had one goal it would be to make it a much faster tempo—to get the points back up there and have more possessions,” Williams says. “If we have more
Beyond center and point guard, there are no easy answers. Marlon London, a 6-4 sophomore who can play either guard position, came relatively unheralded to KU and quietly improved all year before finishing his freshman season in a fury at the NCAA tournament. His teammates have been so impressed by his offensive play that most have labeled him the player to watch this season.

"Marlon London is going to surprise a lot of people," Chenowith says. "He's a great defender, he moves the ball well and he can finish well, too."

London's competition for a spot in the backcourt is formidable. Kenny Gregory started 18 games last season and was the team's second-leading scorer at 11.3 points a game. The 6-5 junior was inconsistent last year, but Williams' vow to install a more up-tempo offense favors the soaring swingman. Freshman Kirk Hinrich, who at 6-3 can play either guard spot, has been a pleasant surprise in pickup games. Texas transfer Luke Axtell, owner of the world's longest Wrangler's and a pretty jump shot to boot, is a dangerous three-point threat. The 6-9 junior fractured a bone in his left hand during an early practice, but is expected to return before the season begins.

"Luke has the ability to score," Williams says. "We're going to put him in the position to score and expect him to score."

With expanded offensive threats in place, Williams is more concerned about this team's defense. Versatile 6-7 senior Nick Bradford, who last year filled in at power forward but is more comfortable at small forward, is KU's best defender and, according to Williams, "one of the great leaders we've ever had."

Unlike last year, when injuries depleted KU's frontcourt, this year's version is stacked. Freshmen Nick Collison and Drew Gooden, both 6-9, can contribute immediately. Injury-seasoned seniors Ashante Johnson, 6-9, and Lester Earl, 6-8, dived for dazzling dunks at Late Night With Roy Williams and appear to be recovered from last year's respective knee surgeries. Earl, who Williams said worked harder than anyone in the offseason to rehabilitate his ailing body, also figures to be an emotional leader for the Jayhawks.

"Last year was tough," he says. "I would go home sometimes and be in tears. But I'm thankful I've had the strength to come back from a really low point, and I hope the younger guys can learn from that."

As competition between tons of talented players for minimal minutes continues, players would be wise to remember Earle's words.

And for those who have trouble conjuring any sympathy for Williams, remember this: To whom much is given, much is expected.

---

**Early-season ratings rank KU college golf's top team**

As the men's golf season got underway in September, Kansas found itself in an unfamiliar spot—ranked first in the nation. Coach Ross Randall's team, which is coming off a remarkable Big 12 championship season, vaulted to the No. 1 ranking after winning the season-opening Nebraska Invitational by a school-record 35 strokes.

"Obviously it's early, but a lot of coaches think its deserved after what we did in that first tournament," Randall says. "In my 20 years of coaching, I've never seen a college team throw out a 69. We didn't count a 69 in the final round."

Senior Ryan Vermeer, who is the country's No. 1 ranked college golfer, won the tournament by nine shots.

The event also marked the return of junior Brad Davis, who played in his first tournament since falling from his balcony and suffering serious heel and back injuries last May.

Washington says the triple-post emphasizes reaction over memorization, which suits KU's personnel.

"It's a good fit for us," Washington says. "We're going to run it a lot because it gives me a chance to put four perimeter players on the floor at any one time. All you need is a player who can guard the center, and Lynn can do that."

Pride, it seems, can do everything, but the beauty of this offense is that she no longer has to. With senior guard Suzi Raymant and sophomore center Nikki White returning from injuries and four starters from last year all back in action, KU promises to be deeper and more versatile than it was a year ago. Competition for playing time will be intense.

Junior forward Brooke Reves, who broke out with a spectacular season last year, says the starting lineup is completely open going into preseason drills. Well, almost.

"Lynn will definitely start, but after that, it's up for grabs," she says. "Everyone's bringing really positive energy, trying to show what they can contribute."

Jackson returns at point guard, but Washington says she will play more at the off-guard position, clearing room for speedy sophomore Selena Scott and junior Casey Pruitt. Reves and Raymant will fight for position on the perimeter, along with sophomore Katie Hannon and freshman Kristen May. On the inside, Johnson, who improved greatly from her first year to her second, hopes to help with the increased strength she acquired in the offseason. White and sophomore Kristin Geoffroy also will contend for inside spots.

The Jayhawks' new offense may be the focus of much preseason attention, but make no mistake: KU, Washington stresses, will still run its trademark pressure defense.

"Year in and year out, we work to be strong defensively," she says. "The fact that we have some healthy players back helps."
Matters of the heartland
A history of Lawrence’s sexual mores during the ’40s and ’50s reveals surprising roots of ‘free love’ and other societal upheavals

In the 1960s, America was shaken by a transformation in the sexual landscape so radical it could only be called a revolution. Nowhere was this transformation more evident than on college campuses.

In Sex in the Heartland, former University faculty member Beth Bailey tells the story of the sexual revolution as it occurred at KU. By basing her study on KU and Lawrence, she explains how even Midwestern campuses and communities with buttoned-down, traditional values succumbed to sweeping societal changes.

When the 1960s began, KU women endured strict curfews. Couples did not simply date: they went steady, got laundered, pinned and engaged in a highly structured courtship system where each progressive step implied deeper commitment and increased intimacy. Homosexuality (classified as a mental illness by the American Psychiatric Association) was grounds for expulsion, as was pregnancy.

When the decade ended, women and men shared coed dorms and celebrated “free love” in the streets. Liberation movements demanded equal rights for gays and women. And the doctrine of in loco parentis, by which universities had justified their strict control of student behavior, lay in shambles.

Thirty years later, the era’s legacy still provokes intense disagreement. Conservative pundits blame the sexual revolution for higher rates of teen pregnancy, divorce and sexually transmitted diseases. They see the outcome as the triumph of selfishness over responsibility, the radical fringe over straight America, Haight-Ashbury over Main Street.

But the real story, Bailey argues, is more complicated. Changes that appeared revolutionary actually grew out of gradual trends. The revolution wasn’t just about sex.

Bailey, associate professor of American studies at the University of New Mexico and, from 1987 to ’89, assistant professor of women’s studies at KU, builds a scholarly case study of Lawrence that persuasively debunks common myths about the roots and results of America’s sexual transformation.

She traces the roots of that change to World War II. In Lawrence, as elsewhere, federal authority subjugated local control during the war, the town’s young men went away, and outside “war workers” poured in. Such massive dislocation gave the sleepy river town ample opportunity to test sexual boundaries. It’s worth noting that the era’s sexual problems—skyrocketing VD rates, promiscuity, public displays of affection—sprung from adult misbehavior.

That changed in the 1950s, when tension shifted from town to gown. Like most universities in the era of pantray raids and parietals (rules governing opposite-sex visits to dorms), KU steered by in loco parents, which held that schools should act as surrogate parents to students. Ironically, the way universities justified that mandate set the stage for their eventual loss of authority, Bailey contends.

Though schools used their parental authority to control an increasingly randy student body, they rationalized that behavior in the political vocabulary of the times. By requiring women to sign out of dorms and meet strict curfews, for example, KU and other schools claimed to encourage maturity and responsibility, thus preparing students to fully participate in democratic society; a patriotic mission indeed in those Cold War days. KU students took that lofty argument to its logical conclusion in 1965, citing maturity and personal responsibility as reasons to dump parietals altogether.

Bailey’s main focus is campus life, but her critical eye scans the cultural landscape, surveying an impressive range of social issues. She contrasts the policies of local and KU health officials on birth control and women’s health care; deftly analyzes tensions between women and men, gays and straights, blacks and whites; and illustrates the balance KU administrators needed to strike between progressive Lawrence and conservative Kansas.

Always evenhanded, Bailey grants that some consequences of the revolution (AIDS, most significantly) proved tragic. Nevertheless, she’s quite capable of pointed social commentary. Her expose of the secret files KU kept on suspected homosexual students sounds a cautionary note to those who yearn for the simpler prerevolutionary days, when a clear code of conduct prevailed. So does her chronicle of the 1968 case of a Barnard College student denounced as a “whore” in newspapers nationwide because she admitted living with her boyfriend.

Sex in the Heartland shows just how extreme the old mainstream mores could be. That, ultimately, is Bailey’s greatest accomplishment: She reminds us exactly what the revolution overthrew.

—Hill is a Lawrence free-lance writer and frequent contributor to Kansas Alumni. His book reviews have appeared in the Chicago Tribune, the Dallas Morning News and other publications.
On origins of respect
A controversy sweeping through Kansas sadly reminds us that not all human emotions are universally embraced.

In my office there is a folder, fat with newspaper articles, all on the same topic: the Kansas Board of Education's recent decision to remove evolution from the state's required high-school curriculum. If memory serves, most of the articles reporting on the board's controversial vote vary only in tone and skill. But kindly allow me to rely on memory. I cannot turn again to that distended collection.

I reach instead for my Dictionary of the History of Ideas, Volume 1. I flip toward the back, where the "cr" entries might be, and the page falls open to a detail of one of Michelangelo's Sistine Chapel ceiling panels. This from the caption: "God Creates the Sun and the Moon ... depicts a God whose creating is miraculous."

I am in the entry "Creativity in Art," and it strikes me that so much flows from "create," which, the dictionary tells us, is to cause to exist, bring into being, originate. It is a verb ever transitive yet never transitory. It always will be, so long as human or higher spirits make things where once there was nothing.

The detail of Michelangelo's painting leads me to memories of the day I saw the chapel ceiling. It was the same day, in fact, that I stood moved and motionless before a statue, stunned to tears by art so pure, so precious, that I spent the rest of that day considering not the statue itself but the human passion that could allow a mortal such powers of ... creation.

The statue was the Pietà. Michelangelo was so justly proud of this marble vision of Mary cradling her beloved Jesus that he carved his name into the band that stretches across the draped folds of Mary's garment. He was only 24 when he finished the Pietà in 1499, yet never again did Michelangelo put his name on his art.

On the day of my visit in June 1984, I was a KU sophomore who suddenly understood that I understood nothing; there once existed on this planet a man capable of creating this, a marble insistence that sorrow is universal. When I saw the statue 15 years ago in St. Peter's Basilica, it was outwardly protected only by a velvet rope, but more powerfully by an emotion not so universal: respect.

That was not enough. A visitor later lunged at the Pietà with a hammer, and a few ounces of marble fell from Mary's face. Although I have not seen the statue since, I'm certain it lost not one ounce of its brilliance. The mutilation's true harm was that it sentenced this unsurpassed human creation to an existence behind the distanced safety of protective glass.

Lack of respect tends to lead to such sorrows; similar disrespect for astounding human intellect recently emerged in Kansas, where the Board of Education dismissed evolution, a foundation of the biological sciences, while also dismissing the intellectual potential of our schoolchildren. The six elected board members who voted against evolution claimed they did so because evolution is only a "theory," but their motives could not have been more transparent. Why lunge at any foundation of science, theory or not, unless you side with an alternative?

I recently saw a performance of The Thunderbird Dancers, who re-enacted their beliefs about the dawn of their world. They told us about the first animal people, who lived in darkness; upon hearing of a thing called light, a miracle being hoarded by others, the animal people set out on perilous journeys to retrieve some for themselves.

After repeated failures, it was Grandmother Spider who fashioned a clay bowl, then spun her web all the way to the Sun, returning safely with a nugget of light for her fellow creatures to bask in. Grandmother Spider was rightly celebrated; even today, her children weave their webs in sunburst designs to honor her achievement.

The Thunderbird Dancers showed respect for their beliefs with their dance. Michelangelo showed respect for his beliefs with his Pietà. Charles Darwin showed respect for his beliefs with On the Origin of Species—a first-edition copy of which is on display at Spencer Research Library.

Befitting the lack of respect it has received in this embarrassed state, the book is behind glass.
How we Wonder What You Are

A new approach to learning grows up

Computers have been here for decades, but they never seemed to capture us. They could be found around campus, in offices and laboratories; many of us had them at home, a few of us had portable models that could be toted about; and they sure were helpful, always pitching in to process words, crunch numbers or digitally design projects.

But the spark, that weird aura that has gripped our culture and promises never to let go, wasn't there before. It seems our computers awaited human language, the ability to help people communicate. They awaited the Internet, the World Wide Web, e-mail; we awaited instant scholarly updates, online libraries and chatty dish.

Now that our computers can—must—talk to each other, technology is on everybody's minds and in everybody's speeches. Newest, fastest, sleekest. Speed thrills. Last month is old; last year is ancient. We need the latest toys, the bells and whistles and gizmos, all packed in candy-colored plastic.

There is, of course, the occasional (and rare) cautionary word: tool. As requests pour in for the newest and latest, we are reminded that technology is just a tool. It is not a substitute for true teaching and lasting learning.

But do we really believe that? Do the people who issue those disclaimers really believe it? Or have we sold our souls for the latest microprocessor, capable of wonders never before dreamed possible yet laughably out of touch by next spring?

As computerized communications continue to blossom, will our physical home on Mount Oread retain its prominence? Will students who earn KU degrees without visiting KU be loyal alumni?

For students on campus, will Internet communications replace the real thing, leading to dorm-room isolation and dormant campus social lives? Will students still love books? Will they still want or need libraries?

How will taxpayers pay for all these changes and all the undreamed changes yet to come? We hear it's imperative that students own their own computers, but what about those who can't afford them? What about kids who didn't grow up with the latest machines whirring away at home? Are they comfortable in our virtual environment, a campus where assignments and class discussions often happen online?

As Internet wanderings get logged in computer memories, have we lost all sense of privacy? Is our work secure, safe from electronic erosion, outdated hardware and, yes, thieves? In days past, few campus criminals eyed ratty notebooks; now a laptop, perhaps harboring endless hours of scholarly sweat, is a black-market prize.

When we told him of our plans for this special issue, geology professor Roger Kaezler quickly agreed to write an essay. He said we were raising subjects that have long concerned him. When we again approached him in August, Kaesler turned reluctant. He said he would not participate in technology bashing: In the wake of the Kansas Board of Education's controversial decision to no longer insist evolution be taught to Kansas schoolchildren, Kansas seemed backward enough as it was.

We assured him we had no such anti-technology intent. We only hoped to look at our technology-giddy university from other perspectives. When administrators offer up their technology initiatives, there is an assumption of good, of untold benefits and glossy, high-tech days to come. But is there a downside to all the wiring, to shrinking our globe into a box that sits comfortably on a desk?

We did not answer every question, and we raised others that perhaps will never find answers. But we at least wanted to ask—and let this University's alumni consider—one ultimate possibility:

Are all these marvels always so marvelous?

—Chris Lazzarino
Required to be Wired?

Even without a University mandate, students scramble to plug in and log in

It seemed like a modest proposal: In September 1998, the provost’s office suggested that to help incoming freshmen succeed at KU the University should consider requiring them to own computers. At the very least, those without computers should be required to have access to one where they live.

“We were trying to create the expectation among incoming students that to do the work you need to do as a college student you really ought to have access to a computer,” says Lindy Eakin, associate provost. “The policy was to get people to realize they need to be connected, need to be using e-mail, spreadsheets and word processing to get by.”

It certainly got them talking about computers. As the debate spread across campus, the proposal struck many as reasonable, even moot. In the information age, after all, computers are as integral to higher education as textbooks and library cards. At KU and colleges nationwide, students are already communicating with professors via e-mail, continuing classroom discussions in online chat rooms, and reviewing syllabi and lecture notes on the World Wide Web. KU statistics indicate that 75 to 80 percent of incoming freshmen show up in Lawrence with computers. Wouldn’t the proposed computer requirement, then, largely be a matter of preaching to the choir?

Students saw things differently. “The most likely reason” one in four freshmen arrives sans computer, noted a University Daily Kansan editorial, “is because they cannot afford them. They recognize the need, they just do not have the money.” Student government leaders challenged administrators to show their support for technology by putting more computers in labs. One KU junior articulated student fears when she told a reporter, “I think it’s an absolutely detestable idea. It’s only going to increase the inequality that already exists in higher education.”

A new p.c. controversy—personal computers rather than political correctness—divided campus, exposing deep fault lines that underlie higher education’s seismic shift toward technology. Though the controversy ebbed (KU decided to rec-
the questions it raised remain largely unanswered. Who should bear the cost of technology in an era of budget cuts, rising tuition, reduced federal aid and increased borrowing? Must the reliance on technology inevitably widen the education gap between rich and poor, majority and minority, ignoring goals of inclusiveness? Or can steps be taken to ensure equal access for all?

No line item in the KU budget dictates spending on computers or other technology. The University’s decentralized funding process, which puts spending decisions in the hands of each academic unit, makes technology funding sources difficult to pinpoint. Money for new technology at KU has traditionally come from sources ranging from research grants to the general funds known as OOE (other operating expenditures) that cover everything from staff to stamps. The schools decide what portion of those funds to invest in technology.

“We try to push the money out there and say, ‘OK, you make some choices between faculty and staff and technology or whatever it is—photocopies, postage, long distance,” says Eakin, ’b78, ’g80, ’g88, Ph’D97. “You can tell by what the schools have done that technology has been a fairly high priority.”

In such a scenario, money spent on computers means less money for other needs. But that’s true of any spending decision, Eakin insists. “It’s a zero-sum game. Almost every decision is one thing vs. something else.”

To overcome that zero-sum limitation, schools such as business and journalism have pursued private fundraising to generate money for technology. The business school’s four multimedia classrooms and several computer labs were funded by alumni. For the School of Journalism, private fundraising has largely driven technology investments. In both cases, lack of state support for technology forced administrators to be creative.

“You see surveys that say KU faculty salaries are funded at something like 80 percent of peer schools,” says Jimmy Gentry, dean of journalism, “and you can probably say the same thing about technology. Technology funding at this university is woefully inadequate, even with the matching program the Regents were able to get through.”

The matching program—the technology fee proposed by the Kansas Board of Regents and approved by the Kansas Legislature in 1998—was first levied by KU last fall. Students pony up $1 per credit hour, and each student dollar is matched by two from the state. Last year KU students paid $600,000 in technology fees; the state match brought KU’s share to $1.8 million.

The fund originated in the KU Student Senate, says Korb Maxwell, student body president. “It was a commitment by students that we were willing to put up another dollar of our tuition and fees if the state would double it, because technology training and access to technology infrastructure mean that much to students. We understand the difference it makes in the job market.” (See sidebar.)

The money, which the provost’s office distributes with some student input, must be spent on technology—be it microscopes or microcomputers. One-third goes to the schools based on the number of credit hours enrolled; another third rewards specific projects; and the final share is earmarked for campuswide infrastructure improvements. First-year infrastructure money helped upgrade parts of the campus Internet backbone, increasing network capacity tenfold. The upshot for students: faster Internet connections.

But faster connections and network plugs on every desktop mean little to students who don’t own computers or can’t access one in a lab.

“There’s definitely an expectation among professors that you have a computer,” Maxwell says. Does that raise the bar so high that some students can’t participate?

“My answer to that is the University needs to raise its bar and make computers available to everyone,” Maxwell says.

“We’re trying to do that with the two-for-one fund. But the University can’t just rely on that money: It needs to start putting other resources into hardware.”

Statistics show that schools can make a difference by providing computer access—particularly for lower-income students.

Students who call for better access to computers are after more than a web surfing and computer games. The workplace demands computer skills for even entry-level jobs.

“If you’re going to be functional in the communications world today, you’ve got to be adept at using technology,” says journalism dean Jimmy Gentry. “So it’s essential that we have the most modern equipment we can get.” Thanks to private fundraising, Gentry controls a half-dozen gift funds that can be used for tech purchases. Those private funds, along with startup money Gentry negotiated as a condition of his hiring in 1997, have allowed the School of Journalism to build an enviable 7 to 1 student-computer ratio: 691 undergraduate students have access to approximately 110 computers for activities such as simple word processing or complex video editing.

The trick is to bring technology to the classroom without letting it drive the curriculum. “Our main job is still to teach kids critical thinking and creative thinking skills,” Gentry says. “If all we do is hammer Quark [a design and publishing program] into some student’s head, we’ve taught him enough to get a job today. If we emphasize problem solving and critical thinking, we create people who are the managers and leaders of tomorrow.”

In the business school, grads are expected to master advanced word processing, database management and spreadsheet software. “People in the business world are using the most advanced computer applications, and they expect our graduates to move right into that in a seamless way,” says Tom Sarowski, dean of business. As freshmen, pre-business students learn Microsoft spreadsheet, word processing, Internet and database programs. “More and more these are the skills that are an integral part of classroom activity,” Sarowski says. “The quicker students have these skills, the more demanding and rigorous can we make the classes.”

—S.H.
Getting online? Get in line.

KU offers nine public computer labs and 19 restricted labs. Public labs, which are open to all KU students, account for 319 of the University's estimated 758 student-access computers. The rest are in restricted labs, which are generally open only to students enrolled in a specific program, such as engineering or architecture. Restricted labs in dormitories are open only to dorm residents.

Since fiscal 1995, KU has added 387 computers to student labs, doubling the number of student-access computers from 371 to 758 by fiscal 1998. Over the same period, the University added 2,457 computer workstations for faculty and staff, boosting the total from 7,011 to 9,468. Beginning last year, a pilot program placed 23 e-mail terminals in high-traffic areas. Judging by the lines of students, they have proven popular.

—S.H.

About 40 percent of U.S. adults own home computers. Examine computer ownership by income level, however, and the numbers at either extreme illuminate the gap between rich and poor. About 75 percent of families with incomes higher than $75,000 own computers; for families making less than $25,000, the rate is 26 percent. A 1997 Newsweek poll further illustrates the sharp division in computer access among income levels. Overall, 89 percent of teens use computers several times weekly, and the rates for upper- and lower-income teens are about the same. But lower-income teens get their access at school; those from families earning less than $25,000 a year were less likely than their peers to use a computer at home. Clearly, access to school-provided computers does translate into equity, providing opportunities that otherwise might not exist for needy students.

So does KU have enough public-access computers? "We're doing well, but we can do better," Maxwell says. "There's been a lot of improvements over the last few years, but we can't be lazy. We need to keep moving forward."

Marilu Goodyear, vice chancellor for information services, echoes that sentiment. "I think it's been greatly improved over the past three years," she says, pointing to the opening of Budig Hall and upgrades to hardware and software in other labs (see sidebar). "But I do think we have a ways to go in providing good access." Providing good access, she points out, includes updating old equipment. "You don't just buy computer equipment once. Every two or three years it's out of date."

Of course, that hard reality applies to students, too. Even if three in four come to campus with their own computer, how many can afford to replace that equipment at least once before graduation?

Ironically, it may be that a computer requirement is the best thing that could happen to financially strapped students. At schools with such requirements, financial aid can help pay for computers. "That's one of the things we were looking at" with KU's proposed computer requirement, says Lindy Eakin. "It might be a way to help students in the financial aid process."

As it stands, students are on their own...

Still in Print

Despite fears that technology will put books out of circulation, libraries remain the best place to bump into ideas.

Keith Russell, the University's new dean of libraries, first heard the bookish twist at a librarians' conference. A colleague told Russell he'd recently seen it in an in-flight magazine and, despite a distinct lack of scholarly pedigree, the article posed a challenging proposition—and not just for librarians.

"You think that maybe we're at a certain crossroads in our lives here in the late 20th century," Russell says,
but think about this: Assume that all we've had for the last 500 years is electronic information and computers...."

Russell pauses, delighting in telling the story just right, and as he resumes, his tranquil demeanor animates with the jittery joy of the intellectually curious.

"... and then, all of a sudden, somebody invents the book."

Russell mimics holding a book, opening its cover, flipping pages. "Here you'd have a wonderful little item. It's easy to carry around, you don't need batteries, you don't need electricity, it's completely portable. If computers were all we had, and then they invented books, how would our lives be different?"

Forget KU-K-State, Michigan-Ohio State, Army-Navy. The rivalries of the information ages span centuries and cool only with the complete destruction of one of the combatants. Will movable type replace illuminated manuscripts? Will mechanized presses obsolete hand presses? Will photography expose painting as anachronistic? Will the telegraph hobble the Pony Express? Will radio replace newspapers? Will TV squelch radio? Will cable destroy TV? Will satellite dishes destroy cable? Will Fox supplant CBS, and will Dan Rather outlast them all?

Pop culture, dazzled by stock prices and instant billionaires, now proclaims the Internet as the grand champion of all information revolutions, capable of shredding everything in its path, including printed books, TV, mail and long-distance telephone calls. If so, surely the first to succumb would be the library, already the tortured geek of the information-age party, the know-it-all with glasses askew that's handy to have around as long as you aren't seen together by any of your friends.

But if libraries are no longer part of the in crowd, somebody forgot to tell the librarians.

KU librarians are currently drawing up a wish list for expansion of Anschutz Science Library. Of more immediate concern is constructing a book and archival record depository to store as many as 2 million little-used volumes currently gobbling space in campus libraries—space the librarians hope to fill with people in a coming era of increased patronage.

And architects recently completed plans to modernize Watson Library by taking it back into its future. According to the architects' vision, a vast fourth-floor reading room will spread out beneath the front windows and a new entry plaza on the west side would lead visitors into a gizmo-loaded reference area offering all the latest electronic possibilities.

"We are envisioning a new library master-plan, which will have for an anchor an expanded, very high-tech Anschutz Library," says Bill Crowe, Spencer librarian and, from 1990 until this past summer, KU's dean of libraries. "For Watson, we want to take it back to the 1920s look and feel, that grand reading room that has been gone for 40 years or more. But this time we'll infuse that whole space with technology."

"There will be space for reflection, but you can still plug in. You will find space where you can think, and also have access to the books, to the technology and to the
people who can help you. The look and feel will be the ‘library as a place.’ Not some nostalgic, sentimental thing, but the library whose space represents very important neutral grounds for inquiry, beyond classes, beyond the laboratory. Faculty want students to become independent learners. Well, no matter how much things change, the students will still be coming to the library to, as they say, read more about it.”

So perhaps books and libraries aren’t doomed. But technology still scares some people, especially academics.

At the University of Washington, reportedly known as a campus where faculty are slow to mobilize in protest, 850 signatures were collected in just three days in support of a public letter blasting one of the governor’s top education advisers, a former UW dean whose offense was a public reference to “the brave new world of digital education.” The Chronicle of Higher Education, academia’s trade journal, reported that the 1998 protest letter “gives voice to fears shared by faculty members nationwide.”

UCLA researchers spent two years surveying 34,000 faculty at 378 colleges and universities, and recently concluded that while 90 percent think student use of computers enhances learning and 87 percent of the faculty use computers to send and receive e-mail, only 35 percent use the Internet for their own research. Perhaps that’s because two out of three survey respondents say the stress of keeping pace with technology is now greater than traditional faculty pressures of publishing scholarly work and carrying heavy teaching loads.

At Berkeley, a prominent historian and winner of the Pulitzer Prize wrote an article for California Monthly with the headline, “Has the library lost its soul?” In his essay, Professor Leon Litwack used the occasion of the end of his term as chairman of a library committee to bemoan, “In our eagerness to implement the new information technology, there is no sense of the need for balance, little or no awareness that different academic disciplines may have different needs, not all of them fulfilled by the new technology. We find ourselves, instead, embracing that technology uncritically, without considering its cost, maintenance, reliability and value.”

Already legendary among librarians are some of the horror stories. Russell—who came to KU from the National Agricultural Library, where he was deputy director—relates a “horrible example” of bureaucratic neglect in which some of NASAs magnetic tapes were not “refreshed,” allowing priceless data to slip forever into the cold vacuum of cyberspace. One published report claimed that 20 percent of the data collected during the 1976 Viking mission to Mars has been lost to electronic decay. U.S. census officials suspect that 4,000 reels of its data are now worthless because they were stored in an obscure format.

Russell recalls the first time his former library published its annual Factbook of Agriculture online; the next year, someone came along and erased the old version to make room for the new factbook, destroying unique information. Newsweek magazine has reported that pharmaceutical companies discovered random, unexplainable errors when research data were transferred onto newer software formats, resulting in blood-pressure numbers dislodged by up to eight digits.

One California university posts case histories of students who use Internet resources to cheat; 17 states have made it illegal to sell term papers, clearly aiming their fury at Internet retailers of plagiarism.

In a landmark report on undergraduate education issued in 1998, the Carnegie Foundation for the Advancement of Teaching proclaimed, “As innovations multiply, so do dangers: In many circumstances, casual over-use of technological aids already increases the real and psychological distance between [faculty and students]. ... If anything is evident, it is that the more information a person can obtain, the greater the need for judgment about how to use it. Obtaining information from the Internet is easy; children in elementary school can do it. But who teaches students how to take advantage of this mass of information? Who teaches them how to tell the difference between valuable information and clutter?”

In 1995, Chancellor Robert E. Hemenway used his first faculty and staff convocation speech to list 10 characteristics of a great University. Although he mentioned computer networking, he never uttered the word “technology.” In his faculty and staff convocation speech just three years later, Hemenway revealed the University’s newest master plan, Initiative 2001, which listed “investment in information technology” as the first priority for “building premier learning communities.”

The world of books and information is changing fast. Then again ... theoretical physicist John Ralston, professor of physics and astronomy, says he does his dreaming and figuring only with the high-speed supercomputer between his ears, and his tools are more portable even than a laptop computer—pencil and paper.

Famed editing professor John Bremner made annual equipment requests of “two new erasers and a box of chalk.”

Says Provost David Shulenburger, “Some absolutely wonderful teaching occurs on this campus without the use of even a chalkboard.”

And, contrary to what might be gleaned from full-page advertisements appearing this fall in the University Daily Kansan, some wonderful reading occurs on this campus without the use of www.netLibrary.com.

“Sure you can read Moby Dick online,” Crowe says. “But why not come to the
library, where a copy already paid for by the people of Kansas is waiting for you, as are two French translations and 65 critical works."

One critic recently charged that the Internet resembles a 16-year-old boy's bedroom: "Messy and filled with shiny gadgets and sexual fantasy.”

So have shiny, fantasy-rich electronic adventures turned kids away from books? Librarians often respond by citing books as the highest-volume commodity sold on the Internet. Others say the Internet, purely by virtue of its shiny gadgetry, is doing more to lure kids into libraries than books ever did.

Karlan Ison Sick, c'60, young-adult specialist for the Bronx branches of The New York Public Library, says many Bronx children flock to the library for computer time, though she admits that most of the teen-age web surfers are scanning the Internet for song lyrics and the latest scoop on Pokemon, a trading-card and video-game craze.

"But while they're doing that," Sick says, "we're also encouraging them to explore the best sites. While they are here they might also look at magazines and books. I'm sure some young people who like to read are now putting in time on the computer, but I suspect that many of them would have been playing video games anyway. I don't see the Internet as cutting into reading time by young people."

University librarians face numerous challenges; closing down shop isn't one of them. Workloads are surging even in places like Spencer Research Library, which will never earn its keep by offering Internet access to freshmen.

"The reason we build places like Spencer is to put in a secure place the best records we have, closest to the source, primary sources, that will allow every generation to explore previous human experience as close to the truth as we could get it," Crowe says. "That challenge has always been great, but it's much greater in the age of the World Wide Web because of the furtive nature of information."

There is still this issue of the library as place...the intellectual heart of the campus.

Spencer librarians are working with University computing experts to perfect methods for "capturing" web sites and Internet sources that reflect our human experience. The Kansas Board of Education's recent evolution ruling brought forth floods of electronic information and opinions; how will Spencer librarians preserve our unique experiences of the past few months?

"We don't want to ask future generations to rely on secondary sources to read about that evolution crisis in the 1990s in Kansas," Crowe says. "It will have much to do with the histories of education, science and politics, and how much of this whole controversy can only be found online? We have a responsibility as librarians to figure out how we capture these records. We're just beginning, and we're struggling, but we will solve it."

"I was amazed," Sick says, the awe evident in her voice.

Sick and others acknowledge that computerized research, for all of its wizardry, discourages students from wandering the stacks in search of a book. Anyone with an eager mind can recall when such journeys led to unexpected treasures, when a search for a Russian history text somehow slipped into a lazy afternoon with the complete diaries of Lewis and Clark.

"The serendipity factor," Sick concedes, "is lacking."

Then there is still this issue of the library as place. When University planners look at Watson and Anschutz libraries, they don't see outdated relics. They see, in fact, the same thing Carrie Watson, KU's revered first librarian, saw: the intellectual heart of campus. True, much of the space and resources will be altered, but the goal remains unchanged.

"It is the location for connecting people and ideas," says Thomas Waechter, planning and programming manager for the Office of Design and Construction.
Management. "You could sit in your dorm room and get this information, but it's the added value of bringing people together to discuss, converse and determine the key features of the prolific information that is out there."

Crowe and Russell, KU's former and current deans of libraries, say the best libraries are conscious of retaining their traditional roles. "A library is a place," Crowe says, "where you can bump into people and ideas."

Russell delights in the simple things: large, flat surfaces for spreading out; a safe environment with good lighting and ventilation; quiet rooms where distractions are few.

Russell insists that he and other KU librarians are aware of the dangers. He says there must be a "real established pattern" for noting the arrival of electronic information, checking to make sure it is not deteriorating and how often it must be transferred to new media. He acknowledges that some disciplines, such as molecular biology, depend on the latest information, most of which can and should be obtained electronically, while others, such as mathematics and botany, still depend on older materials available only on paper.

"There are optimists who think that an awful lot is going to happen in the next 15 or 20 years," Russell says. "I think most of us are stepping back and saying it's too hard to predict, and we don't even try to put a time line on it."

No matter when the real revolution comes, Russell says, there will always be the library's "awe factor," or what Crowe terms a library's unique "intellectual sanctuary."

"It's not an accident that libraries are often built like churches," Crowe says. "You have to recharge your batteries in different ways. One is to get away from the hubbub, where you can read and think and maybe just nod off, without having to say who you are and why you're there. If you want to find ideas, come on in."

---

An ignoble end for elegant icons

Icons of an earlier information revolution, card catalogs are the saddest orphans of the latest information revolution. They served the 20th century well, elegantly storing endless stories, each hinting at where a knowledge-seeker might turn. Now the information they labored to protect has been trusted to others.

As their contents are spilled into computers, reducing the card catalogs to bleak wooden skeletons, KU's empty drawers are shoved out back doors, first offered for use by any other state agency. Usually the cry is not heard, and the unloved wooden drawers end up on a list for public sale. Who will buy this wonderful morning?

One Florida company sells de-carded catalogs in four-drawer sets for $299. They are reportedly hot items with collectors, who use them as knickknack drawers for buttons, toy cars or any other kitschy trinkets that can demean the drawers' imperial heritage.

Card catalogs were one of the important advances in the modern pursuit of knowledge, and date perhaps as far back as the French Revolution. Upon seizing a nobleman's estate, a revolutionary would fetch the nobleman's playing cards and scrawl onto the back of the cards an accounting of the confiscated library.

The great leap in card catalogs came in the late 1800s, when Melvil Dewey standardized not only their size but also the system used to store information about a library's collection. Before Dewey's catalogs (which he handily offered for sale through his own firm, The Library Bureau), many libraries simply tracked their collections in a ledger, adding each new acquisition to the bottom of the list.

"After about 1910, you could walk into any library in the country and find something that looked familiar," says Bill Crowe, Spencer librarian. "You could get started right away without having to poke around and figure out a new catalog system. Now we're battling that standards thing all over again. Does your computer system look like my computer system?"

Crowe says the cards were particularly delightful because they contained information a computer can't replicate. Deft researchers could narrow the possibilities by finding cards that were dirty and worn, "touched by a lot of thumbs and index fingers," their grime usually betraying a popular, and perhaps helpful, text. By noting what was written by hand, by manual typewriter or electric typewriter, a researcher could "gain a sense for the passage of time, which is terribly important."

Says Crowe, wistfully, "A computer is wonderful and efficient, but you can't touch things. The hidden information has been lost."

—C.L.
Words like “responsibility” and “opportunity” continually peppered the debate. So did ideas about “expansion” and “influence.” The University’s role as the state’s flagship institution, administrators argued, demanded leadership and service to the people of Kansas, particularly those in the Kansas City area.

So it was decided, in this climate of the traditional vs. the entrepreneurial, that the University would offer distance education courses whose credits could compose as much as four-ninths of a bachelor of arts degree and theoretically earn an entire master of arts degree. The chancellor celebrated the decision, contending that faculty would gain “a healthful appreciation” of their function as “servants of the state,” keeping them safe from “the danger of mental stagnation, which sometimes threatens the isolated college professor who knows no world but that of his college classes.”

The visionary chancellor was Francis H. Snow, the year 1891. Imploring faculty and staff to embrace his belief that the University exists for the benefit of the society that sustains it, Snow initiated the School of University Extension to respond to the educational needs of working people and others lacking access to a college or university.

More than a century later, Chancellor Robert E. Hemenway stood before his faculty and asked that they, too, be leaders in his vision for 2001.

“We are in the midst of an electronic revolution of extraordinary proportions,” Hemenway said. “I see nothing but opportunity for a university willing to invest prudently in information technology.”

The complementary images suggest a consistency in academic philosophy at the University, rather than a radical departure from traditionalism stirred by the recent surge in technology use. Since 1995 the University has offered courses completely online, and at least two schools, nursing and pharmacy, now offer online degree programs. The national debate over technology’s role in higher education does indeed have a presence at KU, but the fear that computers will replace classrooms as the central learning ground on college campuses is, by most accounts, unfounded.

“Undergraduates need interaction, involvement in campus organizations, experiences outside of the classroom that attach them to a university,” says Provost David Shulenburger. “Online learning will never be able to duplicate the experience of being immersed in the culture of an institution.”

Ed Meyen, professor of special education and principal investigator of KU’s Online Academy, teaches exclusively online and has spent much time defending the merits of his chosen medium. He is bothered by the perception that those who advocate using new technology to teach students are eroding the value of higher education.

“The use of electronic media as a means of instruction is there to complement the structure that’s already in place,” Meyen says. “I want to incorporate this new tool into the values and culture of the University, not change the values and culture.”

Meyen is likewise offended when people refer to his online instruction as “distance education.” Close interaction between students and professors via e-mail makes online courses far more personal than face-to-face teaching, he says.

“We communicate so much back and forth that, as the course progresses, students begin to feel like they’re the only one in the class,” Meyen says.

Each of Meyen’s courses has its own web site, which includes a table of contents, course glossary, syllabus, class roster and lesson plans. Each lecture, which appears word-for-word on screen, is accompanied by an audio version and visuals that correspond to the material. The site also contains lecture notes high-
lighting the text's most important points. Students are asked to turn in individual assignments, collaborate on projects and take exams, but Meyen sets no specific due dates. Students essentially work on their own schedules.

One of online instruction's advantages, Meyen says, is the professor's accountability. Because students and colleagues can review all material in its original form, faculty must pay more attention to the course's preparation, which, in theory, results in a higher quality of material presented.

"It's much easier to identify a bad course online because everything is documented," he says. "Other professors have the opportunity to review the course before it's ever released, so a bad course never has to be released."

But like any child's transition from youth to maturity, online instruction's emergence into the mainstream suffers growing pains. Peer review of online courses could indeed eliminate inferior instruction, but when not taken, the opportunity is meaningless. Assignments on web sites are sometimes vague and confusing. Misunderstandings inherent in electronic communication are frustrating. With no time constraints, students and professors can be endlessly inundated with e-mail messages that demand responses. The overhead costs of putting a course online are higher than those of offering a traditional class. Technical problems in the virtual classroom may interfere with work.

These are precisely the issues that two researchers at Indiana University address in their recent study of one web-based course. In a Sept. 22 New York Times article, Rob Kling, the study's co-author, says researchers have so far overlooked the problems of online instruction while extolling the educational potential of technology. Worse, in the wake of eagerness for all things electronic, problems with the new pedagogy have become a taboo subject in academia, when in fact the subject demands serious examination.

"The professional literature and even the scholarly literature about activities related to the use of computer networks tend to be upbeat, optimistic and at times even utopian," says Kling, a prominent professor of information systems and information science, as well as computer science, at Indiana. He says that to look at literature on the subject, "one would not have a clue that issues of the kinds we identified could happen, let alone be thought through and engaged."

Kling has long advocated combining new media and education. But, he adds, "There are a lot of limitations and it is neither simple nor cheap."

Helen Connors, associate dean for academic affairs at the School of Nursing, participates in the Flashlight Project, a study that measures the results of online instruction. Connors says researchers at KU, the University of Colorado and Indiana University hope to determine whether web-based learning enhances faculty-to-student interaction and student-to-student interaction. Connors, PhD'87, is a pioneer in creating and promoting online degree programs, but she acknowledges that the ultimate effects of virtual education are unknown.

"Sure, there are concerns, but we're not saying, 'Let's not do it' because of that," Connors says. "It's inevitable that online instruction is going to progress. We try to look at the current situation as being a pull for vision in learning rather than a push for technology. Because the technology is there, we don't just say, 'OK, let's dump it all there and teach it that way.' We look at which technology is best for accomplishing the competencies we want to accomplish. We want to step back, evaluate, look at the quality and put things in perspective."

One perspective that Connors and other administrators cannot ignore is that students have embraced online education because of the convenience it affords them. Steven Roy, a Grand Island, Neb., student in nursing's master's degree completion program, says he chose KU's program because he could do it without leaving his full-time job and two part-time jobs and uprooting his family. He is enrolled in nine hours and hopes to obtain his degree in three years.

"I shopped around online pretty extensively before I made a decision," Roy says. "KU's program offered everything I wanted. Being able to do it without disrupting everything else in my life is the best part."

The School of Nursing offers two online degrees. The baccalaureate degree completion program is for nurses who have an associate's degree or a diploma in nursing. It requires some clinical work,
which can be done in the students’ communities with preceptors so the students never need venture on campus. The master’s degree completion program requires students to take oral comprehensive exams, which can be taken on video and mailed to KU Medical Center. Connors also has visions of an online undergraduate degree program, but says online education is not for every student.

“I think online courses generally work best for nurses who already have some experience as a nurse,” she says, “and for people who are self-motivated and self-directed.”

Connors says students in the online programs often participate more actively than their peers in traditional classrooms because they do it on their own time.

“Many of our students have told us they’ll go online at 4 in the morning because the house is quiet, the kids aren’t up, they don’t have to get everybody up for school and then get to work themselves,” she says. “So we get them when they’re really engaged in learning.”

The School of Pharmacy in the spring announced its intention to put its doctor of pharmacy program online, and Connors expects other schools within the University soon to follow suit. As more students obtain degrees without being required to set foot on Mount Oread, questions concerning their socialization abound. Connors admits that achieving a balance between “high-tech and high-touch” is a delicate order.

“We probably spend more time online talking about who you are and what you believe,” she says. “It’s more reflective and helpful to socialization. But I don’t think we’ll know until we have enough graduates out of a program what the real impact of online instruction is on patient care.”

Internet detractors have long argued that computers make students less social. Online instruction defenders have reversed that argument to say that, for many students, online courses provide a real community.

But is it a community that students will feel loyalty toward? Sharon Graham, g’86, director of academic and professional programs for the Division of Continuing Education, says students who obtain degrees in non-traditional ways often feel grateful toward the institution that provided them the opportunity. They may even have a stronger sense of appreciation to the University than the average student, she says.

So alumni association directors concerned about cultivating connections among online students may face a task less daunting than it would seem. The Internet, this perspective suggests, can draw students to a university, traditional or virtual, and keep them connected.

“The essence of this is really the possibility for a continuing lifelong relationship between an alumnus and a university that’s completely new,” says Diana Strange, secretary of the MIT Alumni Association. “The Internet provides an even more powerful connection for schools that don’t have athletics. It’s the first tool that has the ability to really bind us.”

MIT’s Internet list-serve—which gives alumni access to university news, opportunity for interaction with faculty and administrators and a connection to fellow graduates—boasts 27,000 registered users.

“Technology allows universities to offer the density of intellectual opportunities throughout their lifetimes that people come here for in the first place,” Strange says.

Which again raises the online education debate’s most central question: Will students continue to come to campus when they can be educated online?

“We’re basically social people,” Strange says. “Change will happen, but there will always be a demand for real people doing real things in real time.”

The popularity of virtual universities, such as the University of Phoenix, has prompted higher-education institutions across the nation to create online programs, but a monumental shift away from traditional methods of instruction still remains unlikely.

“I would imagine that some schools may make the decision to invest all of their resources in one form of teaching or another,” Connors says, “but I don’t think we’ll make that decision here because we have too much of a presence in both realms.”

When KU organized its School of University Extension in 1891, which later became the Division of Continuing Education, it was one of only three schools at the time to cross the frontier into continuing education (the other pioneers were the universities of Wisconsin and Chicago). Today the University again has stepped with one foot boldly into a new frontier, but its other foot still is planted firmly on hallowed, long-held ground. The mission remains unchanged, says Sharon Graham.

“Now that we’re talking about the Internet and a lot of electronic deliveries, it’s gotten a lot of attention. It’s a lot sexier. But we’ve really been doing this a long time.”

Like any child’s transition from youth to maturity, online instruction’s emergence into the mainstream suffers growing pains.
Sealed with a Click

E-mail messages pose questions about our evolving communications habits

Tom? Meg? You mean I'm actually supposed to care about these fetching people and their highly unlikely loneliness in the movie "You've Got Mail"? C'mon. As far as I'm concerned, the flick's real hero is electronic communication.

The story goes like this: Off-line, Meg and Tom are mouthy business rivals. But in anonymous online correspondence, where they know not to whom they write, they're sweet, considerate and confessional. If you've got e-mail, the movie says, you don't need Cupid, stupid. Love will happen effortlessly because online you'll be your own dear, vulnerable self.

These days, electronic intimacy isn't just a silver-screen fantasy. Increasing numbers of people believe that you don't really need a friend with the same ZIP code because friends are everywhere and intimacy can build paragraph return by paragraph return.

"There isn't enough bandwidth to cover my problems in relationships," a woman wrote to me after we'd chatted briefly at a couple of professional conferences. "Every time it gets to the three-month stage, I break it off."

I hardly knew her. Yet without hesitation, I, too, ponied up stories of bloodied relationships.

Instant intimacy is just one of e-mail's exotic blooms. Flaming is another, as is the creation of false identities.

Are e-mail and other modes of Internet communication—chat rooms, forums and so on—eroding conventions of reserve, civility and honesty that mark face-to-face communication? Is CMC (jargon for computer-mediated communication) the first step toward a degraded (and degrading), disembodied pseudocommunication?

Sven Birkerts, author of The Gutenberg Elegies: The Fate of Reading in an Electronic Age, thinks so:

"It is more and more common to accept an ersatz and mediated communication for a 'real' one. Yes, I am suggesting that communication mainly happens between breathing individuals and ought to be as close to face-to-face as we can make it."

That's debatable, but the rapid spread of CMC isn't.

About 35 percent of Americans use e-mail, says Nancy Baym, assistant professor of communication studies, quoting a Pew Research Center report issued last year.

No doubt exists, either, about CMCs appeal.

Last year, Baym said, a story in The New York Times reported a study of folks who had Internet access at work. They were using it about 10 hours a week to web surf, write e-mail and so on.

Corporations have fought back, forbidding private use of e-mail and the World Wide Web. But universities are different beasts. They value academic and personal freedom, self-supervision. University policy forbids anyone from monitoring the e-mail use of faculty, staff and students.

University attorneys have directed the KU Academic Computing Center NOT to save e-mails, says security chief Craig Paul.

The center doesn't monitor Internet traffic to see who is visiting what sites.

"Unless the computer center is presented a subpoena from law enforcement, we will neither seek to gather evidence nor present evidence," Paul says.

Baym says there's no dirty-little-secret cover-up going on here. The author of Tune In, Log On: Soaps, Fandom and Online Community, published by Sage Publications, Baym believes that the majority of online communication isn't worth monitoring.

"I always bang the 'the Internet is not that different from other kinds of communication' drum," she says, "which I think someone has to do given how eager people are to believe it's a dramatic rupture from the other ways we communicate. We don't become cyborgs."

She admits that "some of the time and for some users it may be easier to engage in personal communication with people we don't know well when we are online than it is when we are face to face."

But, asked about the frequency of the sorts of exchanges that opened this story, she said, "Chances are they're atypical. I guess I'm saying beware of taking the atypical as representative just because it's the most intriguing.

"There is a real phenomenon there (of excessive personal disclosure through e-mail), but it is not the norm."

Flaming—the trading of insults between e-mail posters—is noticeable but not as common as people think, Baym says. (It's institutionalized at alt.flame, a paradise for those who like to torch.)

Early on, Baym says, researchers were convinced that the medium would be inhospitable to social relationships. In an experiment conducted in 1984 at Carnegie Mellon University, people were divided into two groups, each group working to reach a decision. One group met face-to-face, the other online. People were ruder online. The experimenters then predicted that electronic exchanges would be likely to be surlier than the face-to-
face variety.
That's not the case. In fact, some researchers believe that even flaming isn't just sheer nastiness. One of these, David Myers, associate professor of communications at Loyola University, called flaming "a chest-thumping display of online egos," a sporting war of words.

Another CMC-related issue that concerns people is the possibility of deception. Baym mentions research by Lynn Clark, of the University of Colorado. Clark found that teen-age girls were more aggressive online than in person. Several "reported that they adopt new physical personas," Clark writes, "describing their looks in such a way as to appear more attractive to the males."

Baym suspects that people who are more certain of themselves are less likely to falsify their identities.

Even so, masquerading online can be highly educational, Baym says: "When men go online as women, they find out how much more attention women get right away."

For a class project, one of her male students took the handle "Busty" and described himself as a 47-27-47 blonde. "Within minutes, he was getting hit on left and right—even though he was the most blatantly fake woman you could imagine."

If people believe they can discern more easily in person than online whether someone's telling them the truth, they're misguided. "If you look at the research on deception detection, people are bad at that. Cues that people rely on when they're face to face—like whether someone makes eye contact—aren't good indicators. People lie all the time."

Another charge leveled against the Internet is that it makes people antisocial or provides a haven for the antisocial. No doubt, Baym says, some proportion of online wails are off-line loners. But the phenomenon isn't new: In the 1800s, she says, some antisocial people probably escaped by reading novels all day.

And to its credit, the online world permits some socially backward people to flourish. Baym remembers a discussion-group incident. A 14-year-old regular accidentally hanged himself. People worldwide sent condolences to his family.

The family posted a letter to the group that said, in effect, "We thought our child was socially incompetent. We worried that he spent so much time in his room at his computer. Now we see he had all these friends."

Some critics doubt the quality of online friendships. A chapter of Baym's book concerns relationships among those who watch soap operas (in particular "All My Children") and discuss them in Usenet forums. (Usenet links millions of computer users in an enormous stream of topical chatter known as newsgroups. The 30,000-some newsgroups are open forums on specific topics.)

In soap-opera Usenet forums, words like "strange" pop up to describe online friendships. "It is an unusual circumstance," said Anne, who wrote more than 750 messages to the group in 10 months, "this whole entire thing: having 'friends' you never met."

Still, Baym says, "people who have online friendships do not see them as interchangeable with their off-line friendships. We aren't getting lost in an online world where we can't tell the difference."

In fact, many Usenet participants do, eventually, meet. In a 1996 study by Malcolm Park, of the University of Washington, and Kory Floyd, of the University of Arizona, 60.7 percent of those surveyed said they'd established a personal relationship through Usenet. Some 35.5 percent of those used the telephone, 28.4 percent used the mail. One-third had met face to face.

Park and Floyd discovered a "moderate" level of commitment to these friendships.

Baym says the possible aspects of electronic contact include:

- You respond in your own time.
- You gain control over how you present yourself.
- You get to save correspondence to review what people said in the past.
- And it's cheaper than long-distance.

She provided negatives, too: Non-verbal cues like tone of voice are lost, and messages can be saved and replicated, to one's unutterable embarrassment.

Baym concedes, "I think in terms of friendship, touch and physical contact do matter." Hugs are hugs. Online, you can't jump up and down with somebody and celebrate a victory. A playful thump on the noggin, a sudden smile of recognition that carves the air between you and a friend—you can't get those online either.

"When I told my family I was pregnant and my stepfather's eyes swelled with tears . . .,

"Well, that wouldn't have happened with e-mail."

That is, we're still animals. The physical is vitalizing, and e-contact won't take that away.

But e-mail has a place, both as a diversions and as a medium for serious contact. What would Elizabeth and Robert Brownings's love have been without the three or four letters they exchanged daily?

My older brother and I, long estranged, recently came into contact. He wrote, "I never knew a lot about you since we didn't converse or see each other over the years, and now it seems like I'm meeting a different person."

From bro', those words seemed exotically intimate.

E-mail, I believe, made their expression possible.

—Martin, g'73, is communications coordinator for the Office of Research and Public Service and edits Explore, an online magazine about KU research.
Critical Thoughts

Internet information may be just keystrokes away,
but true insight still demands intellectual energy

In September 1861, Charles Darwin wrote to his friend Henry Fawcett one of those wonderful Victorian letters so important in their time. In it Darwin penned an uncharacteristically short sentence that defined the way science works, described the manner in which good science is practiced even to this day, and spelled out the relationship of science to information. "How odd it is," Darwin wrote, "that anyone should not see that all observation must be for or against some view if it is to be of any service!"

Testing hypotheses: That is what science is all about.

We need to ask the right questions and we need to find the right answers. In science, the great ones, by virtue of their insight (the questions they ask) and their accumulated knowledge (the answers they find), are recognized as authorities in the way the world works.

Now we see a challenge to this vision of knowledge and the authority that has traditionally stemmed from it. A burgeoning postmodern view tells us that knowledge is relative. It has blurred the distinction between good ideas and bad ones as being mere opinion, or something that ought to be controlled by local option. Unfortunately, postmodernism has begun to slop over into the sciences with a consequent erosion of respect for authority, even in complex, technical matters. The opinion of the man on the street is increasingly regarded as highly as that of a scientist steeped in his specialty.

As postmodernism has begun to change the way many assess the value of ideas, the Internet and ready access to personal computers have decentralized the development, dissemination and diffusion of information. Decentralization allows bypassing of traditional academic safeguards—editing, peer review and publication. Thus, in a world where knowledge is viewed as relative, one person's opinion is as valuable as another's, irrespective of credentials. Educators charged with teaching critical thinking are too often unable to provide students with norms by which to discriminate good scholarship from bad, notions that have been discarded by postmodernism.

All this will influence the University. To understand how, we must look at the questions asked, the answers found, and the authority accorded the successful scholarly practitioner in a new climate of negotiable knowledge.

Questions asked. Recall what Darwin argued, that observations must be for or against some view if they are to be of any value. Collecting data and processing it into useful information are both costly and time consuming. The benefits of doing so, however, are that you understand the limitations of the information, the question to which the information was originally directed, and the biases and credentials of those who interpreted it.

A hallmark of the information age is the ubiquity of information already available. Pick a topic; information about it is available on the Internet. The information may be good, or it may be the idle ramblings of a benighted crank, but it is available. As a consequence, we now see rows of students gazing at rows of computer monitors as they tap into canned information.

But have they been given the tools they need to assess the information they are using? Is there any way for them to assess such information? The available information may have been collected with some other purpose in mind and might not pertain to the question the student is addressing. One cannot expect to answer tomorrow's questions with yesterday's information.

Now more than ever before, students need to pay careful attention to the questions they ask in their research. They must question the value of the information they use to arrive at answers. Is the information trustworthy, and does it really provide a means of finding the answer?

Answers found. A KU alumna who graduated in the 1940s once asked me, "Which? Do stalactites or stalagmites hang down from the ceiling?" I reminded her of the mnemonic, "Stalactites stick tightly to the ceiling." Then, exaggerating only a little, I confessed that this is about the only thing I learned as a student that is still true today. All the other answers have changed, although most of today's questions are remarkably similar to those of the late 1950s and '60s.

Times change, and the answers—but rarely the questions—change with them. Far from implying that information is relative, that anything goes, and that one idea is as valuable as the next, the changing paradigms should compel us to rely on experts to help us assess the information we use and the answers we get.

Just a few days ago an e-mail message arrived at my computer from a paleontological discussion list. A student at a respected university was beginning his thesis and wanted paleontologists all over the world to send references on his topic—presumably so he would not have to spend so much of his valuable research time in the dreaded library. His approach to research was made even more necessary by the fact that his thesis adviser had no expertise in his area of study and could offer no tangible support—an example of the third way in which the informa-
tion explosion has affected the University: the erosion of scholars’ status.

Deconstructing authority. Two summers ago, responding to a course evaluation, a student complained, “You took points off my maps just because they were not like yours.” Well, yes, after 25 years of experience, a professor will do that sort of thing. In my paleontology class last year a student grumbled, “You graded my essay down for English, but the things you marked were just your opinion.” Again, after editing thousands of pages of paleontological manuscripts and untold numbers of students’ essays, I hope my opinions about style and syntax have merit.

Instead, at every turn we see such authority diminished. We ignore Nobel laureates as Meryl Streep rants about Alar-laden apples. In setting educational standards we disregard teams of scientists and consult fundamentalist preachers. Our bumper stickers say “Question authority!” without telling us where to turn for the right answers if not to the authorities. And do not forget that graduate student, flaunting his disregard of authority, who went so far as to select an adviser with no expertise in the topic.

Every professor who teaches a large lecture course has been vexed by students walking out in the middle of a lecture. “Do they learn that sort of behavior in high school?” we wonder. “Is the subject matter really as boring as that?” As often as not we flog ourselves for not doing a better job of holding their attention.

I can remember when only three television channels sufficed—plus a UHF channel or two that no one ever watched. Now I receive more than 50 channels, and friends in other parts of the country wonder why I settle for such an impoverished menu. The key to all this is point-casting, which has taken the place of broadcasting and contributes in its way to the deconstruction of authority. Information is fired point-blank at specific audiences. We have news channels, weather channels, religious channels, and even one (I am told) that plays nothing but rock music! A professor, droning on about his topic, aims his message at a specific audience. The students, sometimes looking for something entirely different and finding that they cannot change the channels, simply leave.

What to do? Educators can help ourselves and our students if we focus on the questions and pay less heed to the answers. The answers will soon be obsolete in any event. Most of all, we need to try new approaches and let others know when we discover one that works well.

Of course we should question authority. Authority stems not from position but from demonstrated accomplishment. It should always have been so. The key to relating to students is to demonstrate competence—to show that you know the right questions and how to get the right answers. It is fine to be warm and fuzzy, just one of the guys, but winning the students’ confidence involves so much more. With it will come the respect that authority deserves.

In the dark days of the Russian revolution (and they were all dark days), Lenin, quoting Lesage and our own John Adams, is alleged to have written, “The facts are stubborn things.” Poor Lenin! He was so wrong about so many things. Of all the things he said and did, surely this simple adage would endure. After all, facts are facts, are they not?

Alas, in today’s postmodern age, even the facts have become relative. In the process, Lenin has become just another authority to question.

It was Thomas Henry Huxley, Charles Darwin’s close associate, who provided us with the proper approach to the facts with which science deals. In 1860, in a letter to Charles Kingsley, Huxley wrote, “Sit down before fact as a little child, be prepared to give up every preconceived notion, follow humbly wherever and to whatever abyss nature leads you, or you shall learn nothing.”

—Kaesler, g’62, PhD’65, is professor of geology, director of the Paleontological Institute and curator in the Natural History Museum and Biodiversity Research Center.
Strike up the bands
Numerous reunions, including three generations of Marching Jayhawks, are high notes of Homecoming

It's no wonder that Patrick McCarty, Emporia freshman, decided to join the KU band. His grandfather, Philip McCarty, d'52, was president of the band during his days on the Hill. His father Gary, d'76, filled the same role when he attended KU.

And the beat goes on.

The youngest McCarty musician has aspirations of becoming a third-generation master of marching, a praiseworthy president of percussion, a dutifully descended dignitary of drummers.

The family is bonded by brass.

"It's something we all can share," Patrick says. "We get together and it doesn't matter what different kind of music each of us likes, because we all like 'I'm a Jayhawk.'"

The harmonious family reunited at Homecoming Oct. 2, with dad Gary, who is now director of Emporia High School's band, and grandfather Philip proudly joining the alumni band while Patrick took his place with the Marching Jayhawks. As the two groups merged into the traditional "K" during pregame, the link between generations was visible.

"A lot has changed here, obviously, but the fight songs have stayed the same," Patrick says. "So even with the age difference between everybody on the field, we all had something in common. I don't think you ever forget those notes."

The same sentiment was surely in abundance at the Adams Alumni Center, where present and former members of the Spirit Squad reunited before the football game against Southern Methodist, a 27-9 KU victory.

Though they might not have had fight-song notes in mind, there wasn't much forgotten by members of the Class of 1959, who reunited throughout Homecoming weekend for their 40th-anniversary reunion. It was the Class of '59 that left one of the most enduring legacies ever given the University: Honors for Outstanding Progressive Educators.

Kala Mays Stroup, c'59, g'64, PhD'74, remembered when a group of class officers sat around a table in the Dine-A-Mite, discussing their class gift.

"We kept playing around with letters, trying to come up with an acronym that would represent what we truly wanted to do," Stroup says.

Result: The HOPE award, an annual honor bestowed by the senior class to a faculty member of singular distinction.

Hope was the theme brought to Homecoming by M. Haluk "Hal" Emiroglu, g'59, a civil engineer and banker who lives in Istanbul, Turkey, 60 miles from the epicenter of the disastrous Aug. 17 earthquake that shattered his country. Soon after the earthquake, Emiroglu took the time to call Donna Neuner, the Association's...
WELCOME HOMECOMING: On opposite page, three generations of Marching Jayhawks—Philip, Patrick and Gary McCarty—made beautiful music together; Hal Emiroglu traveled from Turkey to join his 1959 classmates; and an alumni-band trombonist eyes his song book. On this page, clockwise from top left, BJ, Everley Eichhorn, d’59, and former roommate Kala Mays Stroup are so close that BJ named a daughter for Kala; Big Jay and Baby Jay lead the Rock Chalk Chart during a sun-drenched Homecoming parade; band members cheer the kickoff (KU 27, SMU 9); happy reunions for the Class of 1959; and snappy sousaphones march sharply.
director of membership services, to say he would still come to Lawrence for the 40-year reunion.

"This is my school. I should be here," Emiroglu said during his reunion with 59 classmates. Although he flew halfway around the world to attend Homecoming, gathering with KU folks is nothing out of the ordinary for Emiroglu; he says he and fellow Turkish Jayhawks gather often to share Mount Oread memories.

Also of particular distinction during Homecoming 1999 was Tom Ebben, general manager and news adviser of the University Daily Kansan, who organized a reunion that brought 140 former editorial and advising staff members to the Adams Alumni Center for a postgame banquet.

Vanessa Fuhrmans, class 92, 93, flew in from Frankfurt, Germany, where she covers European financial markets and insurance industries for the Wall Street Journal.

"When I decided on journalism, I had this glamorous goal," Fuhrmans said. "The term 'foreign correspondent' always seemed exciting and glitzy to me. But, in the end, I'm just a reporter, like all the other reporters. You go out and cover the local story."

A local story turned very much national for Rochelle Olson, class 92, an Associated Press correspondent based in St. Paul, Minn., whose beat is the flamboyant Gov. Jesse Ventura. The weekend of Olson's return to Mount Oread, Ventura's controversial Playboy magazine interview was big news; she could rest easy, though, since she was the first reporter to see the Playboy interview and had reported the story of Ventura's inflammatory comments two weeks earlier.

Although Ventura has loudly proclaimed his disdain for the Minnesota press, Olson knows he might never have a more interesting beat. That's why, all politics aside, she calls Ventura "the gift from God."

"There is such a huge interest in him, and you never know what he's going to do next," Olson says. "Even if he's addressing the Rotary Club, you never know. If you don't go, you do so at your own peril."

The earlier-than-usual Homecoming meant a warm day for the annual parade down Jayhawk Boulevard, but spirits were still high—especially inside Watson Library, where a 75th-birthday celebration was in full swing.

"Watson Library sits right at the center of the University, on one of the highest points on Mount Oread," Chancellor Robert E. Hemenway told a crowd of faculty members and former library employees who gathered for cake and coffee before the football game. "I walk past this library often, many times at night, and when I look up at the building and see these impressive windows all lit up, it makes me secure to know that it's filled with students and faculty, all spending their evenings preparing for the next day's work."

Which brought forth a delighted chuckle from the audience. But Hemenway wasn't far off. Despite the birthday celebration underway in Watson's lobby and the Homecoming football game just a couple of hours from kickoff, a nearby table was surrounded by five students collaborating on a project.

For some, the studying never stops.

**Rock Chalk Scholars say money sways them to KU**

Jonathan Bauer had already decided to attend KU. Then the freshman from Rogers, Ark., received a full scholarship to attend the University of Arkansas. Although the money was tempting, the National Merit Scholar remained true to his instincts and turned down his home-state institution's offer for the opportunity to become a Jayhawk.

Shortly after, he was named a Rock Chalk Society Scholar, easing his financial concerns and affirming his belief that Lawrence, not Fayetteville, was truly the place he was meant to be.

"It was a tough decision," Bauer says. "But it came down to reputation, and KU just has a better reputation."

Bauer, who plans to study business at the University, is one of 19 freshman Rock Chalk Scholars made possible through the Alumni Association's Rock Chalk Society for Academic Excellence. The scholarship picks up the difference (approximately $2,500 a year) between the total cost of a full-ride, in-state scholarship and the University's $5,000 commitment to National Merit Finalists.

The other new winners are Kristen Allen, Topeka; Benjamin Bolluyt, Ames, Iowa; Laura Brunow, Richardson, Texas;
Daniel Cabacungan, Lincoln, Neb.; Justin Davis, Overland Park; Lori Denison, Portland, Tenn.; Laura Givens, Overland Park; Nickolas Hein, Wichita; Christopher Kaiser, Overland Park; Joseph Koch, Leawood; Thomas Morefield, Chesterfield, Mo.; Brian Nish, Omaha, Neb.; Adam Obley, Topeka; Joseph Plese, Overland Park; Derek Richards, Bismarck N.D.; Mark Ross, Winfield; Cori Stites, Leawood; and Elizabeth Wenger, Wichita.

In addition, four previous winners had their scholarships renewed. Last year's recipients Chris Adams and Jennifer Blackwell and 1997 recipients Matt Murphy and Addie Schroeder will continue as Rock Chalk Scholars.

All of the scholars will be recognized at the fifth-annual Rock Chalk Ball, Feb. 4 at the Kansas City Marriott Downtown Muehlebach Tower. Proceeds from the ball benefit an endowed fund that finances the scholarships and reached nearly $450,000 in the ball's first four years. In 1998, the Association and Intrust Bank of Wichita contributed $670,000 to the fund as part of a renewed agreement for the Jayhawk bank card program, making it possible to provide scholarships to a greater number of deserving students.

This year's Rock Chalk Ball chairs are Matthew, c'92, and Kristen Sjoberg Christian, j'93, and John, j'78, and Lisa Dickerson Marquis, b'82. Honorary chairs for Rock Chalk Ball 2000 are Scott, c'54, and Carol Swanson Ritchie, d'54.

For more information about the Rock Chalk Society for Academic Excellence or for an invitation to the Rock Chalk Ball, contact Michon Lickteig Quick, f'85, at the KUAA Kansas City office at 913-248-8458.

One—and only one—ring now offered to graduates

The Campanile's distinctive ring has always been considered golden to the ears of Jayhawks; now our ring fingers can enjoy the same tradition.

HELPING THE CAUSE: Chairs for Rock Chalk Ball 2000 are John, j'78, and Lisa Dickerson Marquis, b'82, and Kristen Sjoberg Christian, j'93, and Matthew Christian, c'92. The fifth-annual Rock Chalk Ball is scheduled for Feb. 4 at the Kansas City Marriott Downtown.

The Campanile, through which Jayhawks march as we walk down the Hill for Commencement, is the featured symbol on a new University icon that launches a single-ring era for KU.

The single-ring concept, a tradition as old as American universities, is gaining renewed converts across the country, including KU. In the past, numerous class rings have been available for purchase; now there is only one class-ring design available, and it is available only to graduates.

Working in partnership with KU Bookstores, the Alumni Association commissioned Milestone, the ring supplier, to create a single ring that will be treasured by all Jayhawks who earned University degrees. Available in 10- or 14-karat solid yellow or white gold, the ring features the Campanile on its oval top. One side of the ring features the Jayhawk; the other displays "KU" in block letters.

Inscribed inside the ring are words known to KU faithful everywhere: "Rock Chalk Jayhawk."

This is the only ring now recognized by the University and commissioned by the Alumni Association.

"This ring design begins a wonderful new tradition that all Jayhawks should be excited about," says Fred B. Williams, president of the Alumni Association. "By wearing this ring, you are displaying your great accomplishment of graduating from the University, as well as your Jayhawk pride."

The ring is available at all KU Bookstores, as well as from the manufacturer. To order a brochure from Milestone, call 1-800-355-1145 and ask for operator 246A. Information is also available from the Alumni Association, 785-864-4760.

Each ring will be inscribed with its own registration number; any lost rings returned to the Association can be traced to the owner and, if the Association has current contact information available, quickly returned.

Rings also will be inscribed with the owner's initials, degree earned and class year.

Women's 10-karat rings are $275; women's 14-karat rings are $325. Men's rings are $350 and $395. Milestone also offers interest-free payment plans.

All rings carry lifetime warranties for resizing and refinishing at no extra charge, and, if the purchaser is not satisfied, rings may be returned for a full refund or exchange.

Proceeds from class-ring sales will be shared by the Alumni Association, KU Bookstores and the University's licensing office, which dedicates its revenue to scholarships.
FOR MEMBERS ONLY

Reservations Required

A reminder to all Association members that the Adams Alumni Center continues to host its traditional Association and University events, including buffets before every regular-season men's basketball home game.

To protect its non-profit status, the Association was recently forced by an IRS ruling to close its à la carte dining services, known as the Learned Club. Food service for Association and University events is now catered on a per-event basis, and the Association retained its Kansas liquor license.

Because food service other than beverages and snacks is now catered by outside firms, reservations are a must for all Adams Alumni Center events, including pregame basketball buffets.

Traditional events that will still be available include pregame buffets, awards programs, dinners in conjunction with Lied Center events and finals dinners for student members.

All banquets and meetings scheduled by members before the IRS agreement will occur.

All other Association programs benefiting members and the University—including Kansas Alumni magazine, biographical records keeping, awards programs, chapter programs across the country and around the world, professional societies, reunions, the Rock Chalk Society for Academic Excellence, Jayhawks for Higher Education, the Kansas Honors Program, Flying Jayhawks and the Student Alumni Association—will continue.

Alumni Events

Adams Alumni Center

Reservations are required for all special events. Call 785-864-4760

Pregame buffets

- Buffets will be offered before all regular-season home basketball games. Because food is now catered, reservations are required. Call the Association at 785-864-4760 for reservations or further information.

November

8

- Carbondale: Dwight and Marilyn Adams

9

- Topeka: Marcia and Michael Cassidy

10

- Chapman: Julie Hamel

15

- Emporia: Gary Ace

16

- Kansas City: Chris Schneider

18

- Coffeyville: Nancy Misch
The names of our Jayhawk Generations freshmen often have a familiar ring. Many of them follow brothers and sisters to the Hill, and a glance through recent Kansas Alumni magazines finds many of those siblings among the Jayhawk Generations features. Indeed, some of the parents of our newest Hawks were featured as freshmen decades ago, when peace signs and bell-bottoms were on their first go-around. Recognition of children and grandchildren following their ancestral footsteps to the Hill has long been a part of Kansas Alumni and its predecessor, The Graduate Magazine. 1925 appears to have been the first year the Alumni Association launched a search for multi-generation families, finding 118 second-generation students as well as four third-generations. Occasional photos and mentions have evolved into a perennial favorite featuring the names, accomplishments and college plans of our new flocks of Jayhawks. This year, we again welcome them to the family.
These 'Hawks are no strangers to the Hill. Among the five fifth-generation 'Hawks are cousins Eric Levy and Nicholas Robinson, descendants of David H. Robinson, one of the first two KU professors, whose family includes 26 KU graduates. Their cousin, John H. Robinson III, in 1994 was one of Kansas Alumni's first fifth-generation Jayhawks. We found Eric Levy's mother listed in the 1971 Jayhawk Generations feature and his grandfather pictured among 143 second-and third-generation families gathered at Homecoming in 1938.

Fifth Generation

STEPHANIE AENCHBACHER is a graduate of Winston Churchill High School in San Antonio, Texas, where she lettered in varsity tennis and competed in district and state competitions as a DECA member. She also was involved in Young Life, Key Club and the National Honor Society. She plans to study business at KU. Stephanie is the daughter of Arthur “Jack”, b’70, and Mary “Jodi” Kunkel Aenchbacher, c’70, and the sister of Patricia Aenchbacher, ’99, all of San Antonio. Her paternal grandmother is Lida Fincham Aenchbacher, ’45, of Wichita. She is the great-granddaughter of Marion LeSuer Fincham, ’18, and the great-great-granddaughter of Owen C., e’888, and Sarah McFarland LeSuer, 1883. The Aenchbachers were honored as Family of the Year in 1996 for their loyalty to KU. Jack's Air Force career has moved them around the United States, England and Germany. Their older daughter graduated from a Virginia high school and Stephanie graduated in Texas, but still they return to the Hill for their college educations.

LINDSAY ALLEMAN, a Kansas Honor Scholar from Blue Valley North High School, earned the President's Award for Educational Excellence among other honors. An accomplished photographer, Lindsay earned the American Royal Photography Award and her photos have appeared in Chrysalis Magazine. Her other activities included band and orchestra, German Club, Political Science Club, Rough Riders and several religious organizations. Lindsay also participated in cross country and track, soccer, volleyball, powder puff football and high adventure explorer post. She plans to major in political science and international studies at KU. Her parents are Robert, ’76, ‘99, and Kay Kitzman Allemann, n’75. All four of her grandparents also attended KU: the late Stanley Allemann, e’39, and Helen Gardner Allemann, c’36, of Bartlesville, Okla.; and Warren, ’59, and Deloris Kitzman, ’77, of Bonner Springs, Kan. Lindsay’s paternal great-grandfather was M.E. Allemann, g’23, and her great-great-grandfather was John Allemann, 1880.

ERIC LEVY graduated from Shawnee Mission South High School, where he was a Principal’s Honor Roll student, National Honor Society member and SMS Heritage candidate. He was a yearbook staff member, participated in repertory theatre and managed a play production, was a yell leader and Pep Club member, and volunteered as a peer mediator. Eric also was a member of International Club and Science Research Club and was a biology cadet teacher. Eric is the son of Peter, c’75, and Alice Robinson Levy, d’75, g’76,
and the grandson of Thomas Robinson, c'39, of Shawnee Mission. His great-grandparents were David B., c'06, and Aileen Weaver Robinson, c'06, and his great-great-grandmothers were Henrietta Beach Robinson, 1869, and Gertrude Bullene Weaver, c1877. Eric's cousin, Nicholas Robinson, also is a KU freshman this year.

**Nicholas Robinson** graduated from Pembroke Hill School in Kansas City, Mo., where he lettered in football his junior and senior years and received an individual award for team dedication. He also was active in the video production of the junior and senior class films. His parents are Bruce Robinson, '75, of Shawnee Mission, and Sally Landis of Baltimore, Md. He is the grandson of Arthur, c'42, m'44, and Betty Hess Robinson, c'43, of Shawnee Mission. His great-grandparents were David B., c'06, and Aileen Weaver Robinson, c'06, and his great-great-grandmothers were Henrietta Beach Robinson, 1869, and Gertrude Bullene Weaver, c1877.

**John Stephenson** Jr. was named All-Eastern Kansas League pitcher his junior and senior years as a member of Blue Valley North High School's baseball team. He also won a Duke University TIPS (Talent Identification Program) award. He played as a pitcher, outfielder and first baseman and was team captain his senior year. He also participated in varsity wrestling and freshman football. He participated in church activities and volunteered with the Men at Work organization. At KU he plans to major in business. His parents are John, c'75, and Kathy Gamet Stephenson, b'74, of Overland Park. All of his grandparents attended KU: the late Donald Stephenson, c'52, and Patricia Haas Murphy, '53, of Birmingham, Ala.; and Donald Gamet, g'39, l'41, and the late Leah Fleming Gamet, '39. John's great-grandparents were Albert, c'25, and Marjorie Evans Haas, f'27. His great-great-grandfather was Richard Evans, l'04.

One of the fourth-generation students was submitted for this feature as a second-generation Jayhawk. The Alumni Records sleuths not only found that Shelby Green's grandmother had attended KU, but also that her great-grandfather had taken classes on the Hill. With Shelby, we recognize 21 fourth-generation Jayhawks this year.

**Brendan Arnold** is a graduate of Springfield (Mo.) Catholic High School, where he was captain of the tennis team that placed second in district competition. Brendan also ranked fourth in the state in singles tennis. He acted in school plays and musicals and played the guitar in band. At KU he plans to study psychology and business. His parents are Paul, c'75, m'78, and Margaret Ballard Arnold, n'75, of Springfield, Mo. His paternal grandfather is Norman Arnold, b'51, of Titusville, Fla. He also is the grandson of the late V. Bryce Ballard, p'42, m'42, and Dorothy Owsley Ballard, c'39, h'40, of Shawnee Mission. His great-grandfather was Volney Ballard, p'08.

**Erin Ballard** was a National Honor Society member, Principal's Honor Roll student and President's Education Award recipient at Shawnee Mission South High School. She served as Student Council secretary and elections chairman and also served on the Principal's Graduation Committee. She participated in Latin Club, volleyball and the high school's radio/television station, KSMS. A Homecoming Queen candidate, Erin served as second attendant. She is the daughter of John III, b'73, and Cindy Ballard of Overland Park; the granddaughter of John Jr., b'47, and Pat Billings.
Ballard, '48, of Leawood; and the great-granddaughter of the late Imogen Billings, 1911. Her brother, John Ballard IV, is a KU junior who was featured in Jayhawk Generations in 1997.

**JOHN BREIDENTHAL** is a graduate of Wichita Southeast High School, where he lettered in football and tennis, was a Scholastic Honor Roll student and served as a student tutor. At KU he will study biology and plans to pursue a medical degree. He is the son of Maurice III, a'73, and Kathryn McCoy Breidenthal, d'73, of Wichita, and the brother of KU senior Matthew Breidenthal. His paternal grandparents are the late Maurice Jr., b'38, and Berdean Bastian Isham, '38, of Wichita. He also is the grandson of the late Thomas McCoy, e'36. His great-grandfather was Maurice Breidenthal, c'10.

**ELIZABETH ELLIS** was a four-year honor roll student at Blue Valley North High School and has twice been listed in *Who's Who Among American High School Students*. She served on the Student Council and Prom Committee and participated in Rough Riders and the Senior Project. She also participated in volleyball, track and field, and gymnastics. Her community service includes Special Olympics, Meals on Wheels, Salvation Army and Safe-Home. She plans to study exercise physiology at KU and hopes to become a personal trainer. Elizabeth is the daughter of Jim, '65, and Ann Moore Ellis, '66, of Overland Park, and the sister of KU senior Peter Ellis. Her maternal grandfather was George Moore, '35. Her great-grandparents were Roy, c'07, and Birdie Greenough Moore, c'06, g'09.

**SHELBY GREEN** graduated from Lawrence High School, where she participated in LHS Poets and was on the track team. She participated annually in her school's Adopt-a-Family program and also volunteered for Ronald McDonald House and the Red Cross. Shelby presided over her church youth group and volunteered for fundraising events and a local food kitchen. She is the daughter of the late Jon Green, e'69, and Judy Rich Green, c'72, of Lawrence. Her sister, Marin, is a KU senior. Her grandmother is Sara Underwood Green, '45, of Baldwin, and she is the great-granddaughter of the late William V. Underwood, '17.

**JOHN HEATHER** earned a certificate for academic excellence at Blue Valley High School, where he was a National Honor Society member and honor roll student. John also earned a President's Educational Excellence Award. His poetry is published in *A Celebration of Midwest Young Poets*. He also is an accomplished debater, winning multiple awards and participating at the state level in forensics. John is an Eagle Scout and holds a black belt in Tae Kwon Do. At KU he plans to major in computer science. He is the son of John A. Heather Jr., e'72, and Kathy Wolfe Heather, f'72, of Stilwell. His grandmother is Dorothy Werner Heather, c'39, of Prairie Village. His great-grandparents were Henry, g'28, and Ellen Werner, '29.

**BROOKE HESLER** is a graduate of Blue Valley High School, where she was news editor for the school paper and a member of the honor roll and National Honor Society. She is the daughter of Robert, e'76, and Virginia Bennett Hesler, c'74, of Overland Park. Her grandfather is former Kansas Gov. Robert Bennett, c'50, l'52, recipient of the Fred Ellsworth Medallion for service to KU and the University's highest honor, the Distinguished Service Citation. Her grandmother is Joan Gregory Bennett, c'50, s'74. Her grandparents live in Shawnee Mission. Brooke is the great-granddaughter of Francis, c'25, g'35, and Mildred McGuffey Gregory, '25.

**RICHARD HICKEY** earned three letters in cross country and one in basketball at Andover High School, where he also received an academic letter. At KU he plans to major in business and pursue a graduate degree in either law or business. His father, Allen Hickey, b'59, was featured in Jayhawk Generations in 1955. His parents, Allen and Lyn, live in Andover. He is the grandson of the late Richard Hickey, b'31, and the great-grandson of Ernest Hickey, c1893.

**LUKE HUMPHREYS** was vice president of his senior class at Ashland High School and was three-time Art Student of the Year. He also participated in forensics, dinner theatre, academic olympics and Quiz Bowl. He played football and basketball, participated in track and was a Student Council representative. At KU, Luke plans to major in graphic design. His parents are John, c'74, and Diane Humphreys of Ashland. His sister, Kate, is a KU senior. He is the...
grandson of the late Frederick, b'43, and Carrie Arnold Humphreys, c'46, of Ashland. He is the great-grandson of the late John Humphreys, g'36, and the late Francis Arnold, '18.

JILL JERRICK was president of her senior class at Lawrence Free State High School, and was a cheerleader for three years. She is the daughter of Michael Jerrick, '74, and Joy Weatherwax Jerrick, d'72, both of Lawrence. Her grandparents are John, b'42, g'55, and Elizabeth Griesa Weatherwax, '41, of Lawrence. Jill's great-grandparents were William, c'08, and Esther Preston Evans Griesa, c'13.

EMILY JETER graduated from Hays High School, where she served three years as class president and presided over Student Council her senior year. She played golf and basketball and participated in swimming. She was a National Honor Society member, Spirit Club participant and girls' choir member. Emily also was a Sunflower Girls' State delegate. She was active in her community and church. Emily's parents are Joseph, c'68, I'71, and Cheryl Campbell Jeter, d'67, of Hays. Her sister, Evan Jeter, is a KU senior who was featured in Jayhawk Generations in 1996. She is the granddaughter of Norman, I'37, and Ann Horton Jeter, '37, of Hays. Her great-grandmother was Vera Preder Horton, c'20.

ANDREW JENKINS was named "1999 Mr. Basketball" at Bishop Miege High School, where he led his team in three-point shooting and had the second-highest scoring average. In tennis, Andrew placed first in team doubles in Sun Country competition. He is the son of M. Todd, c'75, and Sarah Neff Johnson, h'75, of Overland Park. His sister, Hadley, is a KU junior. His grandparents are Harry, d'43, and Barbra Hahn Johnson, d'44, of St. Johns; William, j'49, and Janet Severin Neff, c'58, of Sun City, Ariz., and the late Shirley Leitch Neff, '49. Andrew is the great-grandson of the late WR. Johnson, '21, the late Cecil Leitch Jr., c'25, m'27, and Naomi Augstead Leitch, '26, of Kansas City, Mo.

KALAINA KOEHLER was an honor student at Lawrence Alternative High School, where she studied art. At KU she plans to major in fine arts with a focus on metal smithing and interior design. She is the daughter of Michael and Karen Nordling Koehler, c'73, of Lawrence. Her maternal grandparents are Bernard Nordling, I'49, a recipient of the Fred Ellsworth Medallion, and Barbara Burkholder Nordling, '51. Her grandparents also live in Lawrence. Kalaina is the great-granddaughter of the late Clarence Burkholder, c'20.

MAREN MCCORT graduated from Olathe South High School, where she played volleyball all four years and softball her freshman and sophomore years. She also was involved in community service. Her parents are William, e'74, and Ann Rossman McCort, d'77, of Olathe. Her paternal grandfather is Robert McCort, b'43, of Overland Park. Her maternal grandparents are Richard, c'53, and Betty Crawford Rossman, d'52, of Olathe. She is the great-granddaughter of the late William McCort, g'28.

SARAH PORTER is a Kansas Honor Scholar from Ottawa High School. She was class valedictorian and a Kansas Governor's Scholar. She played tennis and basketball, achieving state rankings in tennis and making the All-Academic basketball team. She also lettered in cross country. She served on several Student Council committees and was active in French Club, Future Educators of America, Key Club and National Honor Society. She sang in the girls' glee club and participated in school musicals and variety shows. She also was active in her community. At KU she plans to major in business administration and accounting. Sarah is the daughter of Charles, c'75, and Margaret Dewell Porter, d'77, of Ottawa. Her paternal grandparents are Tom, b'43, and Mildred Porter, assoc., of Ottawa, and her maternal grandparents were the late John, c'49, and Winifred Ice Dewell, c'46. Her great-grandparents were C. Frederick, I'24, and Mildred Branine Ice, '26.
MARY RAMSEYER is a graduate of Wichita Collegiate School, where she earned the Headmaster Award as outstanding senior woman graduate. She was a member of the top-ranked 3A tennis team in the state, and ranked third in 3A state doubles. She also lettered in basketball and track. Mary sang in Madrigals and served as the group's secretary. She was vice president for Pro Humanitate and participated in the Fall Drama Junior Assembly. She volunteered in her community and earned a Toys for Tots Commander Award. Mary's parents are Rob, b'74, and Ann Dillon Ramseyer, b'75, of Wichita. Her paternal grandparents are Robert Ramseyer, c'47, b'48, of Prairie Village and the late Dorothy Stephenson Ramseyer, f'48. Her maternal grandparents are Paul, b'50, and Ruth Dillon, assoc., of Hutchinson. She is the great-granddaughter of the late Clyde Dillon, '20.

JENNIFER ROBB graduated from Newton High School, where she participated in French Club, Western Dance Club, played volleyball and served on the School Improvement Team's Communications Committee. Her parents are John, b'75, and Karen Robb of Newton. She is the granddaughter of the late George, c'48, l'50, and Dineen Somers Robb, c'47, of Newton, and the great-granddaughter of the late Judge John Somers, l'15.

LAURA RUPE is a graduate of Wichita High School Southeast, where she participated in student government, debate, Art Club, Bible Club and Sierra Teens Club. She played basketball, softball and golf and managed the baseball team. Her parents are Alan, c'72, and Carol Weber Rupe, d'72, of Wichita. She joins two brothers on the Hill: Christopher, a senior, and Patrick, a junior. Her grandparents are Robert, c'47, m'49, and Patricia Strang Weber, c'49, of Salina. She is the great-granddaughter of the late Clarence Weber, m'39.

SAMUEL SHEPHERD is a Kansas Honor Scholar from Emporia High School, where he was named a Scholar Athlete his sophomore through senior years. He represented his school as a Kansas Boys' State delegate. He played soccer and basketball and participated in swimming and track. He was soccer team captain and was named Outstanding Soccer Player. He was a member of his high school's Glassblowers Guild and his work was featured at the Wichita Scholastic Art Exhibit and the Emporia Arts Council Exhibit. He also participated in Student Council and Wildlife and Backpacking Club. His community service earned him a Citizenship Award from his school. Sam's parents are James, b'81, and Mary Prohodsky Shepherd, c'75, of Emporia. His sister, Sara, a KU sophomore, was featured in Jayhawk Generations last year. He is the grandson of Betty Bond Prohodsky, c'40, of El Dorado and the great-grandson of the late Llewellyn, l'17, and Frances Martin Bond, '18.

LAURA SULLIVAN is a graduate of MacArthur High School in Irving, Texas. An avid tennis player, she was Mid Continent League singles champion her sophomore year, Irving city champion her junior year, and a regional team qualifier her senior year. She played in the pep and concert bands her freshman year, participated in Scholar's Bowl as team captain and presided over Future Homemakers of America. She also was a member of National Honor Society, Junior Achievement, Student Council and Spanish Club. She was a yearbook editor and photographer. Laura is the daughter of Thomas Sullivan, b'72, l'75, of Phillipsburg, and Martha Hyten Sullivan, b'74, of Irving, Texas. Her maternal grandparents are Donald Hyten, b'50, l'52, of Wellington, and C. Virginia McCreya Hyten, '51, of Lawrence. Her paternal grandfather was the late Wallace Sullivan, l'34, and her great-grandfather was Thomas Sullivan, 11892.

MEG WOOD graduated from St. Thomas Aquinas High School, Overland Park, where she was a National Honor Society member and president of Teachers of Tomorrow. She also participated in Key Club, Spanish Club, Irish Club and Future Business Leaders of America. She volunteered for Habitat for Humanity. At KU she plans to major in allied health, focusing on occupational therapy or gerontology. She is the daughter of Gordon, a'66, and Christine Lytle Wood, d'68, of Overland Park, and the granddaughter of Muriel Williamson Wood, c'35, b'36, of Pittsburg. Her great-grandmother was Lena McKee Williamson, '06.
Clark Foy is the third of his clan to be included in a Jayhawk Generations feature. His father, Mark, ’71, was listed in 1961 as a second-generation ’Hawk whose parents and three uncles had attended KU. Clark’s sister, Nicole, was featured among 22 third-generation freshmen in 1994. This year, that number has grown to 28.

KELLY ALDRIDGE is a Kansas Honor Scholar from St. Thomas Aquinas High School, Overland Park, and a Kansas Governor’s Scholar. She was a National Honor Society member, Sunflower Girls’ State delegate, and drill team co-captain. She participated in Spirit Club and was a featured dancer in the school musical production. In her community, Kelly volunteered for numerous civic and charitable organizations. At KU she plans to major in nursing. Kelly is the daughter of Claude, c’72, and Jean Villaume Aldridge, ’71, of Leawood. Her brother, Claude, b’99, of Leawood was featured in Jayhawk Generations in 1995 and her sister, Elizabeth is a KU junior. Kelly is the granddaughter of Rosemary Ryan Aldridge, ’46, of Overland Park and the late George Aldridge, b’43.

JESSICA BARRAND graduated with honors from Westside High School in Omaha, Neb. She was a National Honor Society member, president of Future Medical Associates, treasurer of Ecology Club, a varsity cheerleader and traveled to Australia as a People-to-People student ambassador. She plans to major in microbiology at KU. Her parents are Donald, b’71, and Martha Williams Barrand, c’72, of Omaha. Her grandparents are Warren, b’30, and Shirley Robertson Barrand, ’87, of Lawrence.

BROOK BORNKESSEL is a graduate of Blue Valley Northwest High School, where she lettered in track and participated in powder-puff football and several recreational sports. As a yearbook staff member she received a State of Kansas Superior Yearbook Award. She edited her school’s senior class magazine and attended a Scholastic Journalism Conference in Washington, D.C. She also was active in her church. Her parents are Robert, d’75, and Cheryl Parrish Bornkessel, d’73, of Overland Park. Her grandparents are Robert, b’50, and Mary Pollock Parrish, ’50, of Great Bend.

SARAH COLEMAN is a Kansas Honor Scholar from Wichita Northwest High School, where she was a student senator and student body secretary, played varsity tennis, participated in drill team and sang in various choirs including Madrigals and All-City Choir. She was a two-year National Honor Society member and participated in debate and Forensics. She is the daughter of George, assoc., and Jennifer Speer Coleman, c’68, of Wichita. Her grandfather was the late Andrew Speer, ’42.

CASE COLLARD is a Kansas Honor Scholar from Lansing High School. He lettered in football, basketball, choir and forensics, participated in Drama Club and acted in school plays, sang with the Swing Choir and Lansing Sound Spectrum, and was a three-time student council representative. He also presided over the Kansas Association for Youth organization, was active in Boy Scouts and served as a DARE role model. He is the son of James, b’73, and Nancy Dix Collard, ’73, of Leavenworth and the grandson of Betty Tholen Collard, f’37, of Leavenworth, and the late E. Bert Collard, assoc.

KATHERINE CROWE is a graduate of Lawrence High School, where she was a Writers’ Club member and theatre stage crew participant, served as a Color Guard section leader, volunteered for WildCare, Inc., and participated in National History Day. At KU she is a Mount Oread Scholar and plans to major in history. She is the daughter of Spencer Librarian William Crowe, assoc., and Nancy Sanders, c’67, of Lawrence. Her grandmother was the late Dorothy Jewel Sanders, ’33.
ANDREW DANIELSON graduated from Bloomington (Ind.) High School South, where he was defensive and honorary captain of the 5A state champion football team. He also participated in baseball, track, German Club and the schools' honors diploma program. He was active in community service and this summer toured Europe. At KU he plans to study biology and pre-med. His parents are Camden, c'77, and Karen Carpenter Danielson, '76, of Bloomington, Ind., and his grandparents are A.J., assoc., and Marjorie Brown Danielson, '53, of Norton.

WILL DARRAH graduated from Wichita Collegiate High School, where he lettered twice in football and participated in stagecraft. Will began high school at Hun School in Princeton, N.J., where he lettered in crew his freshman year, participating with an undefeated state champion four-man crew. He plans to study architecture or engineering at KU. His parents are John Jr., b'70, and Carol Joy Naccarato Darrah, c'71, m'74, of Wichita. His paternal grandparents are Joan Lylte Dye, assoc., of Wichita and the late John Darrah, l'35. His maternal grandfather is Sibio Naccarato, e'48, of Chesterfield, Mo.

ABIGAIL DICKERSON graduated from Cibola High School in Albuquerque, N.M., where she was a National Spanish Honor Society member, Honor Thespian, swim team and powder-puff football participant. In theatre she earned Best Techie and Outstanding Senior awards. She has earned a KU department of theatre and film scholarship and plans to major in architecture and study theatre lighting design. She is the daughter of Thomas and Betty Cram Dickerson, s'75, g'76, of Albuquerque, and the granddaughter of the late Ole R. Cram, c'40, m'43, Association board member from 1962 to 1967 and Mildred Clodfelter Award recipient.

MICHAEL DIMMEL is a Kansas Honor Scholar from Shawnee Mission South High School, a National Merit Scholar and four-time recipient of the President's Award for Educational Excellence. He was a National Honor Society member and a cadet teacher and lab assistant in biology. He also participated in concert, symphonic and marching bands. Michael holds a first-degree black belt in Tae Kwon Do. He was active in his church youth group and tutored at a local middle school. At KU he plans to major in computer engineering. He is the son of Drew and Jane Phelps Dimmel, d'73, of Overland Park and the grandson of Margaret Redpath Phelps, d'69, of Lawrence and the late Donald Phelps, b'38.

NANCY DIXON graduated from Longview (Texas) High School, where she was a National Honor Society member, participated in Student Council and Service Club and served as spirit director for Anchor Club. She also played in the band all four years. Her family moved back to Kansas this summer and at KU Nancy plans to major in nursing and pursue a graduate degree to become a nurse anesthetist. Her parents are Stephen, g'76, and Patricia Dixon of Leawood. Her grandfather is Gene Dixon, e'50, of Wichita.

CLARK FOY is Hutchinson High School's career receiving leader in football and was named 6A First Team All State Wide Receiver and Reno County Player of the Year in 1998. Clark also lettered four years in tennis, qualifying three times for state competition and earning the 1998 Regional Doubles Champion title. He was named Hutchinson High School Male Athlete of the Year. At KU he plans to earn a liberal arts degree. His parents are Mark, '71, and Clair Foy, assoc., of Hutchinson. He follows to the Hill a brother, L. Ryan Foy, e'97, of Hutchinson, and sister, Nicole Foy, '99, of Lawrence. His grandparents are Maria Hodges Foy, '40, of Hutchinson and the late Lyle Foy, e'39.

MORGAN GARRETT played basketball, football and baseball at Olathe East High School and was named Male P.E. Student of the Year his junior year. He served on Student Council and was a German Club member. At KU he plans to study business. His parents are C. Michael, '71, and Rosemary Butler Garrett, d'73, of Olathe. He joins brothers Matthew, a KU senior, and Michael, a sophomore. His grandparents are Ruby Butler, assoc., of Overland Park and the late James Butler, b'48.

BEN HOFFMAN played on the 5A State Champion tennis team for Salina Central High School, was a DECA member and traveled to DECA Nationals in Orlando earlier this year. He was an honor roll student and helped grade-school students as a "Breakfast Buddy." He is a Whittaker KU Leadership Award recipient. Ben's parents are William, c'75, g'77, and Melina Shuss Hoffman, d'73.
of Salina. His paternal grandfather is Christian Hoffman, e'42, also of Salina. His maternal grandparents are J. Logan, c'38, l'40, and Marian Shuss, assoc., of Parsons.

**JENNIFER HUTSELL** was captain of her soccer team at Deerfield (Ill.) High School. She also was captain of her freshman volleyball team. She was a Varsity Club member, National Honor Society and Spanish Honor Society member. She tutored English and was a senior advisor to freshmen. Jennifer was active in her church youth group, traveling to Mexico, Jamaica and El Salvador on mission trips. Her parents are Jeffrey, c'75, and Sara Cooper Hutsell, c'76, of Deerfield, Ill. Her grandparents are Robert, e'50, and Barbara Zuercher Cooper, c'47, of Albuquerque, N.M.

**TRACY MANWEILER** was 1998 Homecoming Queen at Hoisington High School. She lettered three years in swimming, yearbook and newspaper. She earned several Kansas State Press Association awards and received third-place honors in both tempera and pastels at a local juried art exhibit. She also placed third at Tae Kwon Do state sparring competition. She taught several Sunday school classes and volunteered for the Chamber of Commerce Labor Day Demolition Derby. Tracy is the daughter of Gene, b'76, and Paula Simpson Manweiler, b'77, of Hoisington, and the granddaughter of Larry Manweiler, b'53, also of Hoisington.

**PAUL MATTSON** graduated from Booker T. Washington High School in Tulsa, Okla., where he participated in National Honor Society, National Art Society, Spanish Club and Hornets for Christ. He traveled to Spain on a study trip and completed a mural for a school hallway as an independent art project. He is the son of Lynn and Pam Meador Mattson, d'72, l'75, of Tulsa, and the grandson of Richard Meador, '50.

**JACK MITCHELL II** broke the Wellington High School record for longest touchdown pass with a 91-yard score. He was varsity football quarterback all four years and team co-captain his senior year. He also co-captained the wrestling team and played golf. Jack played saxophone in the concert, pep and jazz bands, earning a top rating at state competition, and earned the Louis Armstrong Jazz Award. He also sang in concert choir and Madrigal Singers and was a four-year Student Council member. He is a liberal arts student with interests in journalism, music, film and drama. Jack's parents are Jackson, j'73, and Julie Motley Mitchell, d'73, of Wellington. His sister, Juliann, is a KU senior. He is the grandson of former KU football coach Jack Mitchell, assoc., of Sun City, Ariz., and the late Jeannie Kincheloe Mitchell, '60. His maternal grandfather was the late Frank Motley, e'36.

**JENNIFER MORRIS** is a graduate of Brentwood (Tenn.) High School, where she was an honor roll student and named the most outstanding Spanish IV honors student. An accomplished pianist, she earned a rating of excellent at the state competition and a superior rating from the Nashville Area Music Teachers' Association. Jennifer played in the jazz band, was a National Honor Society and swim team member, and participated in U.S. History and Spanish clubs. At KU she plans to major in architecture. She is the daughter of David, e'74, g'75, and Peggy Morris of Brentwood, Tenn., and the granddaughter of Alfred Morris, b'51, of Topeka.

**MONICA ODGERS** is a Kansas Honor Scholar from Pittsburg High School. She was yearbook editor, a National Honor Society member, and participated in Key Club and Quill & Scroll. She also taught Sunday school and volunteered at Wesley House. Her parents are Rodney, c'71, m'74, and Karen Odgers, assoc., of Pittsburg. She is the granddaughter of John Odgers, b'50, of Topeka.

**RHYS PAGE** graduated from Andover High School, where he was a yell leader and played hockey. He is the son of Tom and Mindy Hughes Page, c'77, of Wichita. Mindy was featured in Jayhawk Generations in 1973. Rhys is the grandson of Melba VanSickle Hughes, assoc., of Wichita, and the late Oliver Hughes, b'42, l'47.

**TODD RAPP** is a graduate of Air Academy in Colorado Springs. He attended high schools in both Alabama and Colorado and lettered in football and lacrosse. He also was sports editor and a photographer for the yearbook. His future plans include following in his father's footsteps as an Air Force fighter pilot. He is the son of Steven, j'75, and Kathy Pulliam Rapp, j'79, of Colorado Springs, and the grandson of Robert Pulliam, '50, of Kingman.
BENJAMIN RENN is a Kansas Honor Scholar from Wellington High School. He served as Student Council treasurer and National Honor Society president and was a delegate at Boys' State and Kansas Student Council Leadership Camp. He played football, basketball, baseball and golf and participated in Key Club and Scholar's Bowl. He is the son of Chad, '75, and Pamela Palmer Renn, '74, of Wellington and the grandson of the late Robert Renn, b'48, l'51.

CAROLYN RHOADES is a graduate of Shawnee Mission East High School, where she was a National Honor Society and Student Council member and participated in tennis, track and cross country. She has had articles published in The Voice and El Chevre and earned a Gold Award at the Scholastic Art Show. She chaired a Habitat for Humanity project that was featured on “Oprah.” At KU she is taking a pre-med curriculum. Carolyn is the daughter of Charles, c'75, m'78, and Anne Jones Rhoades, '76, of Prairie Village and the sister of KU sophomore Charles Rhoades. Her grandparents are Maxine Weir Rhoades, n'49, of Olathe and the late George Rhoades, m'49.

JOHN SCHROEPPEL was recognized for outstanding academic achievement at Hutchinson High School, where he was a National Honor Society and Student Council member, lettered in football, wrestling and golf and served as co-anchor of the school's Channel One program. His parents are John and Anne Jackson Schroeppe1, '72, of Hutchinson. He is the grandson of Alice Gill Jackson, c'32, g'35, of Eureka.

TYLER SIMPSON graduated from Sabetha High School, where he was active in football, golf, drama, jazz and pep bands, and vocal music. At KU he plans to take pre-med classes and pursue a chiropractic career. His parents are William, '74, and Kathy Simpson of Sabetha. He is the grandson of Peggy Reynolds Simpson, assoc., of Sabetha and the late Robert Simpson, b'38.

KATE THEURER is a graduate of Shawnee Mission East High School and a recipient of the All-State Kansas Basketball Coaches Association Academic Honor Award. In addition to basketball, she played volleyball and ran track. She was a National Honor Society and Prom Committee member and volunteered in her community. She is the daughter of Timothy, c'81, and Roberta Golub Theurer, d'72, of Prairie Village, and the granddaughter of the late Alex Golub, '49.

EMILY WEIDENSAUL graduated from Wichita High School Southeast, where her musical activities included orchestra, marching and concert bands. She also participated in Art Club and designed set decorations and backdrops for plays and musicals. Her parents are Scott, e'76, and Ann Farney Banks Weidensaul, '57, of Wichita. Her paternal grandparents are William, b'49, and Ruth Giles Weidensaul, b'47, of Augusta. She is the step-granddaughter of Shirley Gibson Farney, f'34, and the late J.P. Farney, c'34, m'38.

MONICA WHITE received the scholar Gold Medal Award in fine arts at Cascia Hall Preparatory School in Tulsa, Okla., and participated in National Honor Society. This summer she spent three weeks touring Europe. She is the daughter of John, c'74, d'77, and Ofelia White of Tulsa and the granddaughter of Mary Wray White, n'41, of Tulsa and the late John P. White, c'39, m'42.

Second Generation

The families of Tamatane Aga and John Allen prove that even second-generation families boast numerous KU alumni. John is the son of one of six Mahoney sisters to graduate from KU, and Tamatane is the youngest of four Aga siblings currently enrolled. The Agas were honored Sept. 25 at the football game as part of KU’s Family Weekend.

1967
CASSIE BRYANT, Shawnee Mission East High School, daughter of Robert Bryant, b'67, and Debbie Foster Bryant, d'70, of Overland Park, and sister of Andrew Bryant, '99, of Lawrence.

1969
JEFF ROWE, Shawnee Mission East High School, son of Jack Rowe, c'69, and Paula Rowe of Leawood.

JOHN STEPHEN HOUGHTON, Blue Valley Northwest High School, Overland Park, son of James and Judy Hathaway Houghton, n'69, of Overland Park.
1971

**RACHEL COOPER**, Newton (Mass.) North High School, daughter of Thomas Cooper and Linda Loney, c'71, of Newton.

**JOHN HALEY**, Shawnee Mission South High School, son of James, b'71, and Ginny Agnew Haley, d'72, of Overland Park.

**JULIE MOHART**, Kansas Honor Scholar, Shawnee Mission West High School, daughter of James L., e'71, g'79, and Myrtle Burkle Mohart, d'72, of Overland Park.

**SARAH PATCH**, Shawnee Mission South High School, daughter of Larry and Mary Hibbert Patch, c'71, of Overland Park.

**GREGORY ZILM**, Pembroke Hill High School, son of Frank, c'71, a'71, and Margaret Zilm of Kansas City, Mo.

1972

**JEFFREY BRANDSTED**, Washburn Rural High School, son of Mark, c'72, m'76, and Pamela Gray Brandsted, c'74, of Topeka, and brother of KU junior Timothy Brandsted.

**ABIGAIL HAGERMAN**, Kansas Honor Scholar, South Haven High School, daughter of William, d'72, and Valorie Hagerman of South Haven.

Considered one of basketball's pioneers, McLendon studied coaching while an undergraduate by closely observing Coach Phog Allen, and went on to become one of college basketball's most successful coaches. He was inducted into the Basketball Hall of Fame in 1978 and was awarded the University's Distinguished Service Citation. Throughout his career, McLendon broke racial barriers. He was the first black student at KU to earn a physical education degree and the first black professional coach. He is survived by his wife, two daughters, a son, five grandchildren, four great-grandchildren, two sisters and a brother.

George Pro, e'38, 86, May 3 in Leawood, where he was a machine-design specialist and co-founder of Air-Placo Inc. He is survived by three sons, George, f'66; John, c'69, m'73; and Scott, e'77; and four grandchildren.

Karl Ratcliff, p'32, April 14 in Lee's Summit, Mo.

Frances Thompson Raynolds, c'31, 88, June 22 in Tulsa, Okla. Surviving are five sons, 12 grandchildren and five great-grandchildren.

Rusell Rourke, '37, 83, May 24 in Carefree, Ariz., where he was a retired TWA executive. He is survived by his wife, Florence Lebrecht Rourke, c'36; two daughters, one of whom is Kathleen Rourke Buckingham, c'63; a son, Kenneth, c'65; a sister; seven grandchildren; and a great-grandchild.

Robert Rowlands, c'38, 84, June 19 in Olathe. He was a regional director of the Kansas Department of Vocational and Rehabilitation Services. Surviving are a son, a daughter and a grandson.

Verda Roberts Samuelson, d'38, 87, July 15 in Starbuck, Minn., where she co-owned and operated Samuelson's Drug. Two sons, a daughter and four grandchildren survive.

Emily Lord Sandell, c'34, 86, June 29 in Manhattan. She is survived by two sons and a daughter, Joan Sandell Wallace, f'71.

James Shotton, d'32, g'37, 89, April 20 in St. Joseph, Mo. He lived in Oak Grove.

Dorothy Bleakley Singleton, '32, 87, May 8 in Lawrence. She is survived by her husband, Steve, b'31.

Charles Starr, m'36, 88, June 21 in Burbank, Calif. His wife, Helen, and a daughter, Janet Starr Berkey, d'65, are among survivors.

Jeannette Hardy Valentine, c'38, 81, Aug. 17 in Lawrence. She was retired publisher and columnist for the Clay Center Dispatch. Surviving are two sons, Harry, f'68, and Arthur, d'72; two daughters, Martha Valentine Dowson, c'74, and Victoria Valentine Beckner, d'72; a brother; and 12 grandchildren.

Maxine Barrus Winn, c'30, 91, May 14 in Tulsa, Okla.

Norris Woolridge, '37, 84, July 17 in Hutchinson, where he was a retired rancher and farmer. He is survived by his wife, Helena Crabb Woolridge, assc.

1940s

Harley Anderson, b'41, 79, May 30 in Kansas City. He had been a sales manager for Carter-Storm Water Corp., and is survived by his wife, Geneva; two daughters, Ingrid Anderson Grace, f'76; and Kristen Anderson Wheatley, c'84; two sons, John, b'80, g'82, and David, b'85, g'87; two brothers; and four grandchildren.

Robert Anderson, b'48, 74, April 27 in Ottawa, where he worked for Bennett Creamery. He is survived by two daughters, Carol Anderson Winter Armstrong, d'74, g'78, and Janet Anderson Bradbury, d'73; two sons, one of whom is Bert, c'78; and eight grandchildren.

John Baird, c'49, g'56, 82, April 24 in Newport Beach, Calif. He is survived by his wife, Dorothy Scrogg Baird, c'49; two daughters; and two sons.

Floyd Baker, e'48, 77, July 30 in Prairie Village, Kan., where he was retired after 21 years of civil service with the U.S. Air Force. He is survived by his wife, Patricia James Baker, j'49; a daughter, Holly, c'86, s'92; a son; and a brother, Harold, c'48.

Edith Bossom, c'47, c'49, 72, May 1 in San Diego, where she was retired technical supervisor of the transfusion service at the University of California. She is survived by her brother; John, b'52.

William Bright, c'40, l'48, 81, July 18 in Kansas City. He had been city attorney of Paola for 34 years and had been president of Investors Loan & Abstract. He is survived by his wife, Rebecca Vallerette Bright, j'46, g'81; a daughter; a son; five grandchildren; and two great-grandchildren.

William Burton, b'41, l'51, 80, April 16 in Aurora, Colo., where he was a landman and had worked for Chevron Oil. Surviving are his wife, Jean; three daughters; six grandchildren and seven great-grandchildren.

James Butler Sr., b'48, 82, May 17 in Overland Park. He was a former CPA and is survived by his wife, Ruby; a son, James, b'65; two daughters, Rosemary Butler Garrett, d'73, g'98, and Lucinda Butler White, d'99; 11 grandchildren; and seven great-grandchildren.

Lawrence Chick, '49, 79, June 6 in Kansas City, where he was an agent for New England Financial Services. He is survived by his wife, Elizabeth; two daughters, a son, a sister; six grandchildren and four great-grandchildren.

Adelle Gambr Corkill, '42, 79, Aug. 4 in Atchison. She lived in Nortonville and was a retired volunteer. Surviving are her husband, David, e'40; a son; a daughter; and two grandchildren.

Ralph Dockstader Jr., '43, 76, June 4 in Beloit, where he was an independent grain elevator owner and operator. He is survived by his wife, Mary; a daughter, Sue Dockstader Zientara, c'83; a granddaughter; and two great-grandchildren.

Henry Dunham, m'44, 86, April 28. He lived in Neosho, where he was a retired radiologist. His wife, Mary; and a brother survive.

William Evans, c'48, m'53, 73, Aug. 5 in Great Bend, where he practiced family medicine for many years. He is survived by his wife, Elizabeth Beard Evans, c'46; two sons, one of whom is William, f'77; two daughters, Catherine, c'78, g'90, and Patricia Evans Davis, s'73, s'79; a sister; and seven grandchildren.

Forrest "Frosty" Frease, g'40, 84, June 25 in Greeley, Colo. He was a professor emeritus of English at the University of Northern Colorado. Surviving are his wife, Cynthia Rice Frease, c'39; a son; and a sister.

Joseph Gaba, e'45, 73, April 30 in Kansas City, where he was a retired electrical engineer and sales manager for Sachs Electric. He is survived by his wife, Tzivya, and a son.

Glenn Hahn, b'48, l'50, 72, July 18 in Kansas City, where he practiced law for many years. He is survived by his wife, Marianna; two sons, Erich, b'83, and Jeffrey, c'82; a daughter; a sister, Joyce Hahn Seeger, b'45; and three grandchildren.

Richard Hansen, e'49, 82, Aug. 3 in Wichita. He had been an architect and was retired city planning director for Hutchinson. He is survived by his wife, Bonnie; a daughter; three sons; one of whom is Robert, a'74; eight grandchildren; and a great-grandchild.
Robert Hedges, b'40, 79, Feb. 1 in Ambler, Pa. He had been associate dean of business and chair of the risk management and insurance department at Temple University in Philadelphia. Survivors include his wife, Jane, two daughters, three sisters and four grandchildren.

Virginia Walters Hendon, c'41, 78, Dec. 18 in Birmingham, Ala., where she was a home maker. She is survived by her husband, James; a daughter, Nancy Hendon Fields, c'76, m'81; a son; a brother, Robert Walters, c'62, g'84; and five grandchildren.

William Hollis, b'46, 77, June 23 in Prairie Village, Kan., where he had been an accountant and senior vice president of Russell Stover Candy Co. He is survived by his wife, Marybelle Long Hollis, f'43; a son; a daughter; a brother; two sisters; Jeanne Hollis McCowell, c'45; and Emily Hollis Pfifsch, b'46; and five grandchildren.

James Hughes, c'41, 78, Dec. 25 in Escondido, Calif.

Donald Jarrett, e'48, 72, June 26 in Fort Worth, Texas, where he was a civil engineer. He is survived by his wife, Sandra; a son; two daughters; two sisters; and Mary Jarrett Nielsen, '54; and four grandchildren.

Laura Johnston, g'42, 90, May 7 in Kansas City, Mo., where she was a former teacher.

Dean Kipp, m'43, 80, March 1 in Dallas, Texas, where he was former chief of plastic surgery at Baylor University Medical Center and former chief of staff at Gaston Hospital. He is survived by two daughters, one of whom is Jan Kipp McElvain, c'69; a son; a sister; and nine grandchildren.

Robert "Skip" Twiehaus, e'40, 80, Dec. 3 in Sun City Center, Fla. He was former vice president of Pittsburg Plate Glass and is survived by his wife, Martha Tyson Twiehaus, '43.

Donald Wilber, '46, 76, May 13 in Kansas City, Mo., where he was chief engineer of the automotive division of Mid-West Conveyor Co. He is survived by his wife, Maureen; a son; a daughter, Sandra, j'74; a brother; five grandchildren; and a great-grandson.

1950s

Richard "Gene" Baska, c'50, m'68, 69, June 3 in Kansas City, Mo., where he was a neurologist and a professor emeritus at UMKC. He is survived by two sons and two brothers, one of whom is James, b'49.

Wilt Chamberlain, '59, 63, Oct. 12 in Bel Air, Calif., of apparent heart failure. A consensus All-American during his two varsity seasons at KU, Chamberlain's single-game marks in scoring (52) and rebounding (36) are still KU records. Frustrated by collegiate zone defenses designed to smother him, the 7-foot-1 "Big Dipper" left before his senior season to join the Harlem Globetrotters. In the NBA, he was a four-time MVP and won two world championships, seven straight scoring titles and 11 rebounding titles. He holds numerous NBA scoring and rebounding records, including 100 points in a single game—a 1962 record widely considered untouchable. One of the unquestioned greats in basketball history, Chamberlain also was an outstanding high jumper and shot-putter at KU. Chamberlain maintained he never got over KU's "devastating" triple-overtime loss to North Carolina in the 1957 NCAA championship game, and he made only one official return visit—for a Jan. 17, 1998, ceremony at Allen Field House to retire his No. 13 jersey. Of the tear-filled reunion with appreciative fans, Chamberlain told friend and former teammate Bob Bilings, c'59, "This is the greatest single day of my life."

Willard Cobb, '58, 97, Aug. 11 in Lawrence. He had owned and operated several independent telephone exchanges, a hotel in Kansas City and a pecan farm in Missouri. He also had been interim mayor of Overbrook. Surviving are a son, Gene, d'67, g'72; two daughters, Elizabeth Cobb Brandon, f'56, and Beverly Cobb Richards, c'59, g'62; a brother; eight grandchildren; nine great-grandchildren; and two great-great-grandchildren.

Frank Culbertson, '51, 74, July 5 in Merriam. He worked at Lutz, Daly and Brain Consulting Engineers and at Bibb & Associates. Surviving are his daughter, Cheryl Ellen Culbertson, c'87; and his mother.

Loren Ford, '53, 71, Aug. 21 in Wamego. He had worked for KP&L's Jefferson Energy Center in St. Mary's before retiring in 1988 and had lived in Tonganoxie for many years. Survivors include his wife, Kay; two sons, one of whom is Loren, c'79; two daughters; three stepchildren; eight grandchildren; and two stepgrandchildren.

Janice Brown Graves, f'55, 66, Aug. 4 in Katy, Texas. She worked as a teacher, a real estate broker and an insurance underwriter. She is survived by two sons, a daughter and seven grandchildren.

James Grimes Jr., c'50, l's1, 71, June 24 in Topeka, where he practiced law. He lived in Tecumseh and had founded the Topeka Jazz Workshop Concert Series. He is survived by his wife, Marcene Dameron Grimes, c'51; two sons; a sister; and a granddaughter.

Father Hilary Heim, '59, 75, March 9 in Atchison, where he was a monk of St. Benedict's Abbey for more than 55 years. Two brothers and two sisters survive.

Melvin Hill, c'58, 68, April 8 in Lakewood, Colo., where he was a retired geologist with the U.S. Army Corps of Engineers and the Bureau of Reclamation. Among survivors are his wife, Patricia, a daughter and a son.

Donald Hinchman, c'50, 77, June 24 in Kansas City. He was a regional security director with Western Auto Supply, a special investigator with North American Aviation and assistant city
manager of Independence, Mo. He is survived by his wife, Eleanor Thompson Hinchman, c'47; a son; a daughter; and three granddaughters.

Ella Virginia Hocker, g'57, 81, Aug. 6 in Topeka, where she was a retired medical technologist. A sister survives.

Harold Keeling, c'52, 71, Dec. 8 in Topeka, where he was a retired lieutenant colonel in the U.S. Marine Corps. He is survived by his wife, Frances Kennedy Keeling, assoc.; two sons, Joseph, c'92, and Ross, c'92; a brother, Ross, e'51; a sister; and four granddaughters.

Charles Malody Jr., c'50, April 18 in Kennedick, Wash., where he was retired from a career in the nuclear field. Among survivors are his wife, Gwen, three sons and a daughter.

Fleeta Weigel Neis, n'57, 62, March 4 in Des Moines, Iowa. She is survived by her husband, Arthur, b'62, g'63; two sons, Frederick, n'93, g'97, and Benjamin, c'95; and a daughter.

Mildred Otis, p'50, 84, May 15 in Philadelphia. She practiced law in Agra and served as a representative in the Kansas Legislature. Two brothers survive.

Virginia Stephens Peak, c'59, c'60, 61, Aug. 18 in Mission. She is survived by her husband, Richard, two sons and two grandchildren.

Francis Rees, e'50, 77, June 26 in Pensacola, Fla, where he was retired after a 38-year career with Santa Fe Railway. He is survived by his wife, Lillie; a daughter, Janice Rees Arbuckle, c'71; two sons, one of whom is Jerry, e'66, g'69; nine grandchildren; and a great-grandchild.

Stephen Resovich, d'55, 73, June 6 in Kansas City, where he taught school and was a community development liaison coordinator for the city. He also taught international folk dance. Five brothers survive.

Diana Sadler Schellenberg, g'57, 65, June 7 in Albuquerque, N.M. She was a scientific writer and project manager in the pharmaceutical research and development division of Upjohn in Kalamazoo, Mich., and later was a professional research assistant at Purdue University's veterinary medicine school. She is survived by her husband, Richard Eisenhour, two sons, her mother and a brother.

David Schmidt, c'52, 72, Nov. 21 in East Wenatchee, Wash. He is survived by his wife, Joann, a daughter and two sisters.

Robert Shinn, b'52, 70, July 18 in Honeoye, N.Y. Survivors include his wife, Karen; a son; a stepson; two stepdaughters; and a sister, Peggy, b'50.

Patricia Creech Shivel, '50, 57, July 1 in Great Bend. She is survived by her husband, David, c'52, m'55; and a sister, Glenna Creech Galloway, c'44.

Jack Thornberry, e'58, 71, May 28 in Ridgecrest, Calif. He worked for the Department of Defense at China Lake and is survived by his wife, Judy Leckey Thornberry, assoc.; three sons; two sisters; a brother; Bill, e'55; and a granddaughter.
